# RESPONSE TO DEFICIENCIES
# EXHIBIT L - PMH Capital Investments and Cost Savings Table

## Table from Question 37a - Capital Investments and Cost Savings Table

| Hospital | Describe Improvements in Financial Performance | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | Investments since Acquistion | | Profitability | | Liquidity | | Solvency | | Cost Savings | |
| Los Angeles Community Hospital at Bellflower | $ 3,646,633 | | N//A | (a) | N/A | (a) | N/A | (a) | N/A | (a) |
| Foothill Regional Medical Center | $ 7,912,807 | | N/A | (a) | N/A | (a) | N/A | (a) | N/A | (a) |
| Our Lady of Fatima Hospital | $ 11,321,376 | (f) | $ 15,184,000 | (g) | $ 4,976,828 | (c ) | $ 67,475,613 | (c ) | Marginal Cost per day reduced to $1,493 from $1,542 | (d) |
| Roger Williams Medical Center | $ 11,321,376 | (f) | $ 15,184,000 | (g) | $ 4,976,828 | (c ) | $ 67,475,613 | (c ) | Marginal Cost per day reduced to $2,271 from $2,263 | (d) |
| Nix Health System | $ 33,350,077 | | $ 20,867,000 | (h) | $ 15,882,118 | | $ 63,789,134 | | Total Costs per day decreased to $1,444 from $1,584 | (e) |

(a) Both Los Angeles Community Hospital at Bellflower (Bellflower) and Foothill Regional Medical Center (Foothill) were closed prior to PMH acquisition
Bellflower re-opened in July 2015 and Foohill re-opened in September 2015. Both facilities were purchased in May 2014.

(b) Los Angeles Community Hospital at Bellflower is under common corporate ownership structure and license as Los Angeles Community Hospital and
Los Angeles Community Hospital at Norwalk. As such, liquidity and solvency for this campus includes financial information for all three campuses combined

(c ) The profitability, liquidity and solvency of Our Lady of Fatima and Roger Williams Medical Center are reported on a consoldiated basis for the CharterCARE system
Prior to the acquisition, the liquidity of CharterCARE system was approximately a negative $2.5 million
Profitability is measured on an EBITDA basis and reported on a consolidated basis for the CharterCARE system

(d) Measured from June 2014 to May 2015

(e) Measured from Dember 2011 to September 2015. Prior to acquisition Nix did not compute Marginal cost per day.

(f) Total capital investment in Our Lay of Fatima and Roger Williams Medical Center (which comprise CharterCARE) is reported on a combined basis.
In addition to the amount already spent, we have committed to spend $20 million in addtion to what has already been spent
on (i) cancer center; (ii) Digestive Diseases Center; (iii) Emergency Department and (iv) physician practice acquisitions.

# EXHIBIT M - PMH Quality Report from Rhode Island CON

# CharterCare and Prospect Holdings Quality Review

**Health Services Council**

**April 8, 2014**

**Mary Reich Cooper MD JD**

# No Conflicts of Interest

# Statutory Authority and Background

# RIGL 23-17-14.3 "Licensing of Health Care Facilities"

- The character, commitment, competence, and standing in the community of the proposed owners, operators, or directors of the health care facility;
- In cases of initial licensure or of proposed change in owner, operator, or lessee, the extent to which the facility will provide or will continue to provide, without material effect on its viability at the time of initial licensure or of change of owner, operator, or lessee, safe and adequate treatment for individuals receiving the health care facility's services;
- The extent to which the facility will provide or will continue to provide safe and adequate treatment for individuals receiving the health care facility's services; and
- The extent to which the facility will provide or will continue to provide appropriate access with respect to traditionally underserved populations and in consideration of the proposed continuation or termination of health care services by the health care facility.

# Hospital Conversion Act 23-17.14-3 and 23-17.14-4

- Assure the viability of a safe, accessible, and affordable healthcare system that is available to all of the citizens of the state.
- Establish a process to review whether for-profit hospitals will maintain, enhance or disrupt the delivery of healthcare in the state and to monitor hospital performance to assure that standards for community benefit continue to be met.

# Hospital Conversion Act 23-17.14-8

- Whether the character, commitment, competence, and standing in the community or any other proposed communities served by the proposed transacting parties is satisfactory.
- Whether sufficient safeguards are included to assure the affected community continued access to affordable care.

# Hospital Conversion Act 23-17.14-8

- Whether the transacting parties have provided clear and convincing evidence that the new hospital will provide health care and appropriate access with respect to traditionally underserved populations in the affected community.
- Whether the conversion demonstrates that the public interest will be served considering the essential medical services needed to provide safe and adequate treatment, appropriate access and balanced health care delivery to the residents of the state.

**WhyNotTheBest.org, accessed March 17, 2014 and April 2, 2014 based on data from hospitalcompare.medicare.gov through March 2013**

THE COMMONWEALTH FUND
A Private Foundation Working Toward a High Performance Health System

# Patient Experience:  national

**Percent of Patients Highly Satisfied**
This measure is used to assess adult inpatients' perception of their hospital. Patients rate their hospital on a scale from 0 to 10, where 0 is the worst hospital possible and 10 is the best hospital possible. These patients gave a rating of 9 or 10.

Reporting date range: 2012-04-01 to 2013-03-31

# Additional Quality Areas

2398

# Assessment and Findings

Review the service lines and clinical services delivered by the hospital to ascertain whether adequate resources will continue to be available for those services.

# Assessment and Findings

**Review bed availability, staffing, occupancy and maintenance of adequate resources to provide care.**

# Assessment and Findings

- Review Information Technology, including
  - Electronic Health Records' Platforms and Investments
  - Access to Health Information Exchanges
  - Meaningful Use Cert.
  - HIMSS Analytics

US EMR Adoption Model℠

| Stage | Cumulative Capabilities | 2008 Year End | 2013 Q3 |
|---|---|---|---|
| Stage 7 | Complete EMR, CCD transactions to share data; Data warehousing; Data continuity with ED, ambulatory, OP | 0.0% | 2.2% |
| Stage 6 | Physician documentation (structured templates), full CDSS (variance & compliance), full R-PACS | 0.1% | 11.1% |
| Stage 5 | Closed loop medication administration | 0.5% | 20.9% |
| Stage 4 | CPOE, Clinical Decision Support (clinical protocols) | 3.1% | 15.1% |
| Stage 3 | Nursing/clinical documentation (flow sheets), CDSS (error checking), PACS available outside Radiology | 18.7% | 31.9% |
| Stage 2 | CDR, Controlled Medical Vocabulary, CDS, may have Document Imaging; HIE capable | 40.0% | 8.4% |
| Stage 1 | Ancillaries - Lab, Rad, Pharmacy - All Installed | 17.4% | 3.5% |
| Stage 0 | All Three Ancillaries Not Installed | 20.4% | 6.9% |

HIMSS Analytics

# Assessment and Findings

**Review Public Health Indicators for the population served, including Kaiser Family Foundation, California Health Care Foundation, and other public data.**

# Assessment and Findings

**Review additional external certifications such as Magnet, Baby Friendly, CARF, and Disease Management Certifications such as stroke, diabetes, et al.**

# Assessment and Findings

**Review any available public citations for fraud and abuse as they pertain to provision of care.**

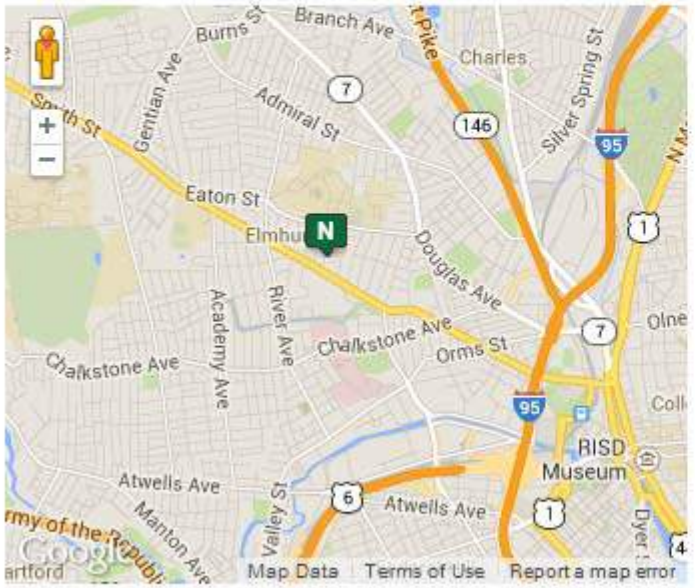
# Assessment and Findings

**Review external grading agency reports as available, including but not limited to US News, Healthgrades, Leapfrog, and Consumer Reports.**

# Assessment and Findings

**Review PSO participation and any public or submitted information about adverse events.**

# Assessment and Findings



**For any wholly-owned or affiliated nursing homes and other post-acute hospital care organizations, review nursing home compare, homecare compare and any submitted information.**

# Elmhurst Extended Care Facility

## ELMHURST EXTENDED CARE FACILITY

# CharterCare Home Health Services

- **CharterCare Home Health Services performed at or above the national average for Home Health Care Agencies in all categories.**

http://www.medicare.gov/homehealthcompare/profile.html#profTab=2&ID=417029&state=RI&lat=0&lng=0&name=CharterCare accessed April 6 2014

# Assessment and Findings

**Review status of ACGME or AOA oversight and accreditation or citations of any training programs that exist.**

# Assessment and Findings

**Review Quality Improvement activities.**

# Conclusion

**Based on my review of all available material, my role and experience as an expert consultant in the six domains of Quality, and my review of the statutory requirements for a Change in Effective Control and Hospital Conversion, my opinion is that the transacting parties satisfy all the requirements identified in RIGL 23-17-14.3 "Licensing of Health Care Facilities" and HCA 23-17.14-3, 23-17.14-4 and 23-17.14-8 that pertain to a quality review.**

None.

# Environmental Claims DRAFT

Last Updated: 10 16 2015

On April 28, 2011 an Emergency Incident Report was made to the State of Connecticut, Department of Environmental Protection as to an in-ground tank failure resulting in the release of #6 Fuel Oil (Petroleum) at Manchester Memorial Hospital, 71 Haynes Street, Manchester, Connecticut. All corrective action items completed with the installation of four monitoring wells. Water samples will be regularly monitored. First report after installation had no issues.

On February 13, 2014 the Department of Energy and Environmental Protection (DEEP) was contacted as to a possible break in an oil line resulting in the release of hydraulic fuel oil at 36 Haynes Street, Manchester, CT. The area of concern was excavated and no break in the pipe was found. DEEP determined that the leak occurred under the building and was un-recoverable as digging under the foundation would jeopardize the building structure. The excavated area was restored. There are no follow-up action items.

Dear Ms. Buell:

Attached you will find our Plan of Correction related to your visit of July 9, 2015, during which you investigated an incident involving a patient who assaulted another patient.

We feel we have adequately addressed your findings in this Plan of Correction. However, please feel free to contact us if further information is needed.

Sincerely,

Barbara Studer, RN, MAOM, CPHQ
Corporate Director of Quality & Risk Management

| E 000 | Initial Comments<br><br>The following reflects the findings of the California Department of Public Health during the investigation of an entity reported incident.<br><br>Entity Reported Incident: CA00449364<br><br>Representing the Department: 2091, HFEN<br><br>The investigation is limited to the specific entity reported incident investigated and does not represent the findings of a full inspection of the facility.<br><br>Three deficiencies were written for entity reported incident CA00449364 | E 000 | | |
| E 292 | T22 DIV5 CH1 ART3-70215(a)(2) Planning and Implementing Patient Care<br><br>(a) A registered nurse shall directly provide: (2) The planning, supervision, implementation, and evaluation of the nursing care provided to each patient. The implementation of nursing care may be delegated by the registered nurse responsible for the patient to other licensed nursing staff, or may be assigned to unlicensed staff, subject to any limitations of their licensure, certification, level of validated competency, and/or regulation.<br><br>This Statute is not met as evidenced by: Based on observation, interview, and record review, the facility failed to provide one-to-one supervision as ordered by the physician for three of three sampled patients (Patient 1, Patient 2, and Patient 3). This failure resulted in Patient 1 sustaining a jaw fracture after being hit in the face by Patient 2. | E 292 | E 292 Planning & Implementing Patient Care – One-to-One Supervision<br><br>***Corrective Action***<br><br>Patient 1 was immediately placed in a room separate from Patient 2 after being hit by Patient 2. Patient 2's discharge to a mental health unit was expedited. Regarding one-to-one observation of Patient 3, the ordering physician was contacted to clarify whether 1:2 or 1:3 observation would be acceptable. The physician indicated that 1:3 observation would be acceptable.<br><br>Computerized order entry now offers a "SITTER" option, where prior to this, "1:1 Observation" was the only available choice when a physician ordered observation of a patient. This became effective 7/21/15.<br><br>To assure other patients are appropriately observed when sitters are ordered, the policy, "Sitter Usage, Assessment and implementation," was revised to include criteria for observation by sitters, to include 1:1, 1:2, 1:3, and 1:4 sitter-to-patient ratios. Nursing Supervisors were in-serviced on the revised policy on 7/21/15. | |

## FIRE / LIFE SAFETY

The mission of Fire and Life Safety management is to support the hospital in maintaining a safe environment for our patient, Visitors, and employees.
In the entire field of fire life safety, nothing is more important than prevention!

### Prepare For The Fire:

- Keep fire alarm pull boxes, fire extinguishers, sprinkler heads, and smoke detectors free from obstruction.
- Keep corridors, passageways and exits clear at all times.
- Know the locations of the nearest fire alarm pull boxes and fire extinguishers in your area.
- Know the location of the closest exits, evacuation routes and what to do in response to the fire alarm
- Keep work areas and storage rooms free from combustible clutter and debris.
- Report defective electrical equipment, blocked exits, stairways, and fire doors to your Supervisor.
- DO NOT BLOCK EXITS.

### Possible causes of fires include:

- Electrical equipment and small appliances;
- combustible materials-such as paper, cardboard boxes, dirty linen – pile up;
- Carelessness with oxygen;
- Arson.
- Keep an eye out for all these problems, and report them as appropriate.

### Types of Fire:

CLASS "A"
fires occur in combustible solids, like paper, linen, and clothing. Can be extinguish by water.

CLASS "B"
Fires involving flammable liquids, such as gasoline, oil, alcohol, benzine, etc., which are best extinguished by smothering. (This includes food on the stove fires.)

CLASS "C"
Fires involving electrical equipment, appliances and wiring in which the use of non-conductive extinguishing agent prevents injury.

THE MAJORITY OF LACH & NCH FIRE EXTINGUISHERS ARE: **ABC TYPE**

### The Fire Response Plan – RACE

- **RESCUE / The highest priority are saving people's Lives**, the first step is to get everyone out of the room or area where the fire is. We are especially concerned about patients who can't take care of themselves. Employees and visitors with disabilities will also need special attention.
  When leaving the room be sure to shut the doors behind you. They should latch, but not lock, so the fire fighters can get in when they arrive.

- **ALARM / Activate alarm.** (Know Location of Nearest Pull Station) Activating alarm ensures that the building occupants are alerted to the emergency and fire department is notified. call the PBX operator to report the fire. Be sure to take this step immediately after rescuing, so that the appropriate emergency response personnel are notified and can start to the scene of the fire.

  **In addition to the alarm, call the emergency number- 911**

  DIRECT OPERATOR HOTLINE:
  LACH Ext. 555 NCH Ext. 77

- CONTAIN / The third step is to keep the fire – and smoke – from spreading. Close each door and window in the area.
  **If fire threatens your area, initiate the following procedures:**

  a. Turn off all fans, air-conditioning, exhaust fans, etc.
  b. Turn off all electrically operated equipment, however leave the lights on.
  c. In case of an electrical fire, power is to be turned off at the main switch.
  d. Keep telephone lines clear.
  e. Close all doors and windows.
  f. Use the fire extinguisher to suppress the fire only if you have been trained and it is safe to do so.
  g. Notify the Control Center when you are in readiness for evacuation.
  h. Standby for orders.

  **If the fire is not in your area, be alert, be guided by the instructions of your area supervisor, or Director of Plant Operations.**

  a. Area supervisors will direct activities of staff members within their units by:
     - Assigning personnel to take fire extinguishers and reporting to the scene of the fire.
     - Turning off all fans, air-conditioning, exhaust fans.
     - Turning off utilities as required.
     - Turning off oxygen shut-off valves as required.
     - Closing all doors and windows.
     - Standing by for further orders.

- EXTINGUISH / When you reach the fourth step, it is time to attempt to extinguish the fire, by using a fire extinguisher.

## The steps to Putting Out a Fire – PASS

- PULL the pin. / Break the plastic tie by turning the pin like a key in a lock, and then pull the pin out. Don't squeeze the handle while doing this.

- AIM the hose, horn at the base of the fire. Water extinguisher will shoot 30-40 feet when fully charged. The other kinds require you to get up to 8-10 feet away, or even closer.

- SQUEEZE the handle.

- SWEEP the stream from side to side, covering the material that is burning.

## Evacuation

It is important for each employee to know their department's specific evacuation procedures. If evacuation is required, give special attention to children and person with disabilities. Go to your appropriate relocation point and verify that everyone from your area is accounted for. If someone is missing, notify fire department personnel on scene.

## FIRE OBSERVATION REPORT

DATE: 1-31-14

OBSERVERS LOCATION: Sub Acute

☑ Simulated Situation ☐ Fire ☐ Smoke ☐ Other _____

CAUSE & SOURCE OF FIRE:

☐ Bed ☑ Wastebasket ☐ Electrical ☐ Laundry ☐ Medical Gas
☐ Explosion ☐ Paper ☐ Wood ☐ Other _____

EXTENT OF FIRE:

☐ Large ☑ Small

**INSTRUCTIONS:**
Place "yes" in the blank space if conditions are satisfactory and "no" in space if unsatisfactory.

### SAFETY OF LIFE

Yes ☐ No ☑ Occupant removed from the room. Simulated
Yes ☑ No ☐ closed to fire room.

### NOTIFICATION / COMMUNICATION

Yes ☑ No ☐ Did Staff sound the alarm when the fire was recognized?
Yes ☑ No ☐ Did Staff sound the alarm by pulling down on the alarm box?
Yes ☑ No ☐ Notification from fire area to the PBX
Yes ☐ No ☑ Was the Fire department called? By who? Simulated
Yes ☑ No ☐ Administrator Paged? By who? PBX
Yes ☑ No ☐ Was fire alarm audible?
Yes ☑ No ☐ Was the page audible? Was the location clear?
Yes ☑ No ☐ "All Clear" sounded to all departments?

### ORDERS

Yes ☑ No ☐ Was on duty personnel reported to assigned area and remained for orders?
Yes ☑ No ☐ Was personnel stationed at the telephone for further orders?
Yes ☐ No ☑ Was personnel sent to meet and direct the Fire Department? Sim
Yes ☐ No ☑ Were elevators brought down and held on the main floor? Sim.

### RETURN/REPORT TO FIRE LOCATION

Yes ☑ No ☐ Were all doors closed?
Yes ☑ No ☐ Were Fire Extinguishers taken to the to the fire area?
Yes ☑ No ☐ Did Staff simulate fire extinguishment?
Yes ☑ No ☐ Did Staff know their specific fire response duties?

### EVACUATION

C.5

_____ Horizontal (at least one set of fire doors)
_____ Vertical
_____ Total
Yes ☑ No ☐ Was Staff prepared to evacuate the building?

## PATIENT AND VISITOR SAFETY

Yes ☑ No ☐ Were all exits and passageways leading to exits kept clear?
Yes ☑ No ☐ Were Patients and visitors escorted to a safe area?
Yes ☑ No ☐ Did personnel assisted in calming Patients and visitors?

## EQUIPMENT AND APPLIANCES

Yes ☐ No ☑ Were gas appliances turned off
Yes ☐ No ☑ Were electrical equipment shut down? (Not lights) Sin dato
Yes ☐ No ☑ was it necessary to shut off oxygen?
Yes ☐ No ☑ Were HVAC systems shut off

## PROTECTION OF HOSPITAL SUPPLIES AND RECORDS

Yes ☑ No ☐ Were the narcotics cabinets locked?
Yes ☐ No ☐ Were all cash, books, ledgers, charts & files prepared for removal?

## INTERIM LIFE SAFETY MEASURES (ILSMS) (Los Angeles Community Hospital)

Before actual fire or Fire Drill:

Yes ☐ No ☑ Did Engineering, Security, or Housekeeping personnel SHUT OFF the air conditioning unit switches in the corridor adjacent to room 105 and 106. Sin

After actual fire or Fire Drill:

Yes ☐ No ☑ Did Engineering, Security, or Housekeeping personnel TURNED the air conditioning unit switches in the corridor adjacent to room 105 and 106. Sin

## REMARKS AND RECOMMENDATIONS

Note: Reports to be made out immediately after each drill by the unit/department supervisor
Reports shall be sent to the Director of Plant Operations

Comments: No issues to Report.

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. Except for nursing homes, the findings above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

wound.

On 3/16/15 at 1405 hours, Resident 1 was observed sitting in her wheelchair next to her bed. She was unable to respond to verbal commands. Her arms and hands were contracted and the top of her left hand had multiple skin (pigment) discolorations as a result of the burn.

On 3/16/15 at 1455 hours, Resident 1's attending physician was interviewed. The physician stated Resident 1 had limited movement in her extremities and required total assistance from the staff for all ADL care. When asked how Resident 1 sustained the burn to her left hand, the physician stated he could not think of anything "hot enough" to cause a burn, but the item would have to be very close (to the left hand).

An interview with RN 1 was conducted on 3/16/15 at 1540 hours. RN 1 stated Resident 1 was showered every day on the day shift. She stated the resident's hair was washed during the showers.

On 3/16/15 at 1550 hours, an interview was conducted with CNA 1. CNA 1 stated before the burn to the resident's left hand, the resident's family and staff used a hairdryer to dry the resident's hair. CNA 1 stated the hairdryer was stored in Resident 1's room but had been removed after the 1/18/15 incident.

On 3/16/15 at 1605 hours, an interview was conducted with LVN 1. LVN 1 stated she was assigned to work as a caregiver for Resident 1 on

| | 1/18/15. LVN 1 stated on the morning of 1/18/15, she gave Resident 1 a shower and washed her hair. She stated while Resident 1 was still lying on the shower gurney, she took the hairdryer from Resident 1's bedside to dry the resident's hair. LVN 1 stated when she was going to dry the back of her hair, she took the hairdryer from her left hand and placed it down near the top of the gurney, on the left side, so she could raise Resident 1's head. She stated the hairdryer was remained on while she was repositioning the resident's head. LVN 1 stated Resident 1's arms/hands were contracted (when lying down the resident's hands were up by her head) and the heat from of the hairdryer was blowing in the direction toward the resident's left hand. When LVN 1 was asked if she thought the burn could have been caused by the hairdryer being left on and placed at the head of the shower gurney, she stated the hairdryer was "the only thing it could have been." When LVN 1 was asked if the burn to Resident 1's hand could have been prevented, she stated "yes." She stated she could have placed Resident 1 in a wheelchair before she dried her hair, like she had seen other CNAs do. When LVN 1 was asked if she was aware of Resident 1's left shoulder blister that was observed on 1/19/15, she stated "no."<br><br>During an interview on 3/16/15 at 1635 hours, the DON stated Resident 1 required total care from the staff for all her ADL care. When asked how Resident 1 sustained the burn to her left hand, the DON stated she was unable to determine the cause. The DON stated since the incident to Resident 1's left hand, all hairdryers had been | | | |

Letter 1

**IMPORTANT NOTICE – PLEASE READ CAREFULLY**

Lawrence Bottorff, Administrator
Newport Specialty Hospital
14662 Newport Avenue
Tustin, CA 92780

Dear Mr. Bottorff:

**On January 15, 2015, an abbreviated survey for complaint no. 426078** was conducted at your facility by the California Department of Public Health, Licensing and Certification Program (State Agency), to determine if your facility was in compliance with federal participation requirements for nursing homes participating in the Medicare and/or Medicaid programs.

The enclosed Centers for Medicare and Medicaid Services (CMS) form, entitled "Statement of Deficiencies and Plan of Correction" (CMS-2567), documents that no deficiencies of participation requirements were identified during this visit. Please sign, date, and return this form to our office (see address below) by February 6, 2015.

If you have questions concerning the instructions contained in this letter, please contact Kathleen Davidson, District Administrator at 714-567-2906.

Sincerely,

Hang Nguyen

The following reflects the findings of the California Department of Public Health during a RECERTIFICATION survey.

Representing the California Department of Public Health: Surveyor 28950, HFEN; Surveyor 29767, HFEN; and Surveyor 34325, HFEN.

The surveyors entered the facility on 9/3/14 at 0730 hours. The census was 21.

**This Plan of Correction constitutes my written credible allegation of compliance to the deficiencies noted.**

GLOSSARY OF ABBREVIATIONS
BM - bowel movement
CDC - Centers for Disease Control and Prevention
C-diff - Clostridium difficile
cm - centimeter(s)
CNA - Certified Nurses Aide
CNO - Chief Nursing Officer
CPR - cardiopulmonary resuscitation
DSS - Dietary Service Supervisor
ESBL - Extended Spectrum Beta Lactamase
EMT - Emergency Medical Technician
GT - gastrostomy tube
H2O - water
H&P - History and Physical
IDT - Interdisciplinary Team
kg - kilogram(s)
LVN - Licensed Vocational Nurse
MAR - Medication Administration Record
mg - milligram(s)
MLT - Minimal Leak Test
MRSA - Methicillin Resistant Staphylococcus Aureus
P&P - Policy and Procedure
PEEP - Positive End Expiratory Pressure
PIP - Peak Inpiratory Pressure (the pressure

Findings:

According to the facility's P&P titled Restraints - Physical dated 5/2014, a physical restraint is any device attached or adjacent to the resident's body which restricts the resident's freedom of movement. A physician's order must be obtained prior to the use of a restraint. Possible alternative measures other than the use of the restraint should be discussed with the resident or responsible party. If a restraint is needed, the nurse should contact the physician and initiate verification of informed consent. The care plan should be updated to reflect the needs of the resident. The weekly progress note shall address the need for the restraint, any alternatives to the restraint, any least restrictive measures other than the restraint, address the possibility of a restraint reduction and address how the resident can maintain his highest functional level.

1. On 9/3/14 at 1500 hours, Resident E was observed sitting up in bed. The resident's bed was enclosed with a mesh covering on top of the bed and around all sides. The mesh covering had a zippered area to allow the staff to provide the resident's care as needed while the resident was in the bed. The zipper was closed.

Clinical record review for Resident E was initiated on 9/10/14. Resident E was admitted to the facility on 11/5/13.

On 9/4/14, Resident E's height was 113.5 cm (44.7 inches) and weight was 21.3 kg (44.86 pounds).

Review of the physician's orders showed an order dated 5/16/14, for the use of a Posey bed to

*Residents will be reviewed monthly during the Interdisciplinary Team meeting. Discussion will include the appropriateness of beds, and to explore less restrictive bedding options. as long as Posey bed is in use. 10/16/14

*The records of all residents using enclosed beds will be audited monthly to ensure proper documentation is being followed. 10/10/14

*Quarterly fall risk assessment will be reviewed at the Interdisciplinary Team monthly meeting. 10/16/14

*All new orders for enclosed beds will be audited to ensure that all required elements are in place, including MD order, trial of less restrictive measures, signed consent and parent request for enclosed bed when appropriate. while Posey bed is in use. 10/5/14

Review of the clinical record failed to show documentation an informed consent was obtained from Resident E's responsible party regarding the risks and benefits of the use of the Posey bed.

Documentation in the clinical record failed to show Resident E was thoroughly assessed for the need of the restraint and which alternative therapies had been implemented prior to the use of the Posey bed.

An interview and concurrent clinical record review with RN 1 was initiated on 9/10/14 at 1500 hours. When asked why Resident E was using the Posey bed, RN 1 stated Resident E could stand up and was in danger of falling out of bed. When asked if the resident had ever fallen out of bed since his admission to the facility, RN 1 stated no, but he was at risk of falling. When asked for documentation to show the informed consent was obtained to address the use of Resident E's Posey bed, RN 1 stated she would check the overflow files to find the consent. However, no documentation to show the informed consent was obtained was provided. RN 1 was unable to provide documentation showing alternative interventions had been attempted prior to the implementation of the Posey bed. RN 1 was unable to provide documentation to show Resident E was thoroughly assessed regarding the need for the Posey bed.

2. Clinical record review for Resident 7 was initiated on 9/3/14. Resident 7 was admitted to the facility on 3/28/14.

On 9/4/14, Resident 7's height was 106.5 cm (41.93 inches) and weight was 17.6 kg (38.72

*Findings will be included in quarterly PI reports and reported to Organization-Wide Quality Council for further actions as needed.

pounds).

Review of the September 2014 recapitulated physician's orders failed to show an order for the use of the Posey bed. Further review of the clinical record showed a "Physician Order: Pediatric Sub-Acute Restraints" form dated 7/21/14. The type of restraint was documented as a Posey bed. The area to document the status of Resident 7 showed "over actively moves bilateral lower extremities out of the bed, kicking rails and constantly moves in bed." The instructions on the form showed restraints "will be observed every 15 minutes." Further review showed a "Physician Order : Pediatric Sub-Acute Restraints" form dated 9/4/14, showing the use of the Posey bed with the status of the Resident 7 documented as a "Fall Risk"

Review of the Doctors Progress Notes dated 7/21/14, showed an IDT conference was held and Resident 7 was doing well with no major issues over the month. The documentation failed to show the need for the Posey bed.

Review of the care plan failed to show a care plan problem to address the use of the Posey bed or a care plan problem to address Resident 7's behavior of "over actively moving of his lower extremities out of the bed, kicking the side rails, constantly moving in bed" or his risk for a fall.

Review of the Weekly Nursing Summary reports dated 8/25 and 8/18/14, failed to address any alternatives or least restrictive measures to be attempted prior to using the Posey bed for Resident 7.

On 9/4/14 at 0750, a Posey bed was observed in

Room B which was designated for Resident 7. Resident 7 was out of the facility at the time.

An interview and concurrent clinical record review was conducted with RN 1 on 9/4/14 at 0800 hours. RN 1 verified the Posey bed was considered a restraint. RN 1 was unable to find an informed consent regarding the use of Resident 7's Posey bed. Furthermore, RN 1 was unable to find documentation showing Resident 7's responsible party had been informed of the risks and benefits of using a Posey bed as a restraint and had been provided information regarding alternative therapies.

A telephone interview was conducted with RN 1 on 9/9/14 at 1100 hours. When asked if ongoing assessments to address Resident 7's need for the Posey bed had been completed, RN 1 stated she was unable to find an assessment to address Resident 7's need for the Posey bed restraint. RN 1 stated the physician rewrote the order every 7 days and documented the status of the resident on the form. RN 1 further verified the Weekly Nursing Summary reports dated 8/25 and 8/18/14, failed to address the use of any alternative interventions or least restrictive measures to be attempted prior to using the Posey bed for Resident 7. RN 1 verified the physician's order form showed restraints to be observed every 15 minutes and stated the facility did not check the resident every 15 minutes when a restraint was ordered. The facility's P&P is to check the resident every two hours and document on the Restraint Flow sheet.

3. On 9/10/14 at 1430 hours, Resident H was observed in a Posey bed restraint with all the mesh covering zippered closed. Resident H was

resting quietly with arms moving.

On 9/10/14, clinical record review was initiated for Resident H. Resident H was admitted to the facility on 5/6/14.

On 9/4/14, Resident H's height was 89 cm (35.04 inches) and weight was 13.5 kg (29.7 pounds).

A care plan problem to address the use of the Posey bed was not found in the clinical record.

Review of the Physician Order, Pediatric Sub -Acute Restraints form dated 9/4/14, showed the Posey Crib as the type of the restraint for "Spastic Movements".

An interview and concurrent clinical record review was conducted with RN 1 on 9/10/14 at 1445 hours. RN 1 verified Resident H's use of the Posey bed as a restraint. RN 1 was unable to find an informed consent to address the use of Resident H's Posey bed. Furthermore, RN 1 was unable to find documentation showing Resident H's responsible party had been informed of the risks and benefits of using a Posey bed as a restraint. RN 1 was unable to find a care plan problem to address the approaches including the staff needed to take when caring for Resident H while using the Posey bed restraint. RN 1 was also unable to find documentation an assessment to address Resident H's need for the Posey bed restraint had been completed. RN 1 stated there was no documentation found in the IDT notes dated 8/14/14, or in the Weekly Nursing Summary dated 8/28/14.

An interview by phone was conducted with the

Review of the physician's order order dated 11/26/10, showed Resident 6 "may only OOF (out of facility) if two people with completed educational packet and valid CPR cards" were present. A physician's order dated 12/31/11, showed Resident 6 might go out of facility for six hours up to two times per week.

Review of the care plan showed a care plan problem to address Resident 6's family dynamics dated 1/22/10; however, it failed to address the physician's order regarding the need for two persons with completed educational packets and valid CPR cards to accompany Resident 6 for out of the facility passes.

Further review of the clinical record showed two American Heart Association Healthcare Provider CPR cards for Resident 6's family members issued on 10/2010, which had expired on 10/2012. No further documentation of current CPR card verification was found in the clinical record.

Review of the facility's form titled Out of Facility Release showed the facility and the physician were free from all responsibility in regards to the resident's condition during the resident's absence from the facility. Review of Resident 6's Out of Facility Release form dated 9/7/14, showed Resident 6's family member signed him out at 1400 hours, and returned Resident 6 to the facility at 2000 hours. Resident 6's family member also signed him out on 8/3, 8/10, 8/17, 8/24, and 9/1/14, for a period of approximately six hours each time. Further review of the Out of Facility Release form failed to show documentation of a second person being present during Resident 6's

requirements continue to be met, including current family education. CPR cards and other requirements per the MD order.

Measures/Systemic Changes:

*All parents requesting OOF privileges will be required to complete all education and other requirements before being granted OOF pass. 9/5/14

*Monthly audits of all residents that are eligible for OOF passes to ensure that all eligibility requirements have been met, including CPR card, other requirements per MD order. Facility will offer assistance to family members in finding locations and times to obtain required certifications. 10/1/14

*Parents will receive monthly reminder notices about impending expiration dates of CPR cards. 10/1/14

Monitoring:

*Monthly audits of all eligibility requirements, including current 10/1/14

accordance with the comprehensive assessment and plan of care.

This REQUIREMENT is not met as evidenced by:
Based on interview and clinical record review, the facility failed to follow the physician's order regarding the necessary medical training and supervision needed to ensure one of 10 sampled residents (Resident 6) was safe when taken out of the facility by the family. Resident 6 has a tracheostomy (a tube going from the front of the neck to the trachea to provide an air passage to help with breathing when the usual route for breathing is obstructed or impaired) due to a history of respiratory distress (not enough oxygen passes from the lungs into blood) A physician's order showed two people with valid CPR cards were needed to take Resident 6 out of the facility. The facility failed to follow the physician's order to ensure two people with valid CPR cards were present when taking Resident 6 out of the facility. This posed the risk of compromising Resident 6's health and safety during out of the facility passes.

Findings:

Clinical record review initiated on 9/3/14, showed Resident 6 was admitted to the facility on 1/22/10 and readmitted to the facility on 5/6/14. Resident 6 had a tracheostomy tube and GT (a tube placed through a surgical opening in the abdomen to the stomach for the purpose of feeding and medication administration) Resident 6 had diagnoses including anoxic encephalopathy (brain damage due to lack of oxygen) and respiratory failure.

**F309**

Corrective Actions Taken for Affected Residents:

*The affected resident family has been notified that their Out of Facility (OOF) pass are suspended until evidence of current CPR cards is presented. 9/3/14

*New Out of Facility Policy has been drafted and approved by the Medical Director to include guidelines about OOF passes and family requirements. 10/14/14

Corrective Actions for Other Residents:

*Immediate audit of all resident records was done. No others were found to be deficient. 9/3/14

*Monthly audits will be done of all residents that are eligible for OOF passes to ensure that all eligibility 10/1/14
throughout the year The need to continue audits will be determined at the annual evaluation.

release from the facility as specified in the physician's order.

An interview with RN 1 was conducted on 9/4/14 at 0930 hours. RN 1 verified due to family dynamics, two people with valid CPR cards were necessary to accompany Resident 6 when he left the facility. RN 1 was unable to find documentation showing proof of current CPR cards of Resident 6's family members who had been taking Resident 6 out of the facility. Furthermore, she was unable to find a care plan problem to address Resident 6's needs when leaving the facility.

F 322 SS=D 483.25(g)(2) NG TREATMENT/SERVICES - RESTORE EATING SKILLS

Based on the comprehensive assessment of a resident, the facility must ensure that --

(1) A resident who has been able to eat enough alone or with assistance is not fed by naso gastric tube unless the resident ' s clinical condition demonstrates that use of a naso gastric tube was unavoidable; and

(2) A resident who is fed by a naso-gastric or gastrostomy tube receives the appropriate treatment and services to prevent aspiration pneumonia, diarrhea, vomiting, dehydration, metabolic abnormalities, and nasal-pharyngeal ulcers and to restore, if possible, normal eating skills.

F 309

CPR cards and other requirements per the MD order, certification expiration and review of OOF requests will be done.

*Parents will receive monthly reminder notices about impending expiration dates of CPR cards.

*Findings will be included in quarterly PI reports, and reported to Organization-Wide Quality Council. and re evaluated at the end of the year for the need to continue reporting.

| F 322 | Continued From page 15 | F 322 | | |

This REQUIREMENT is not met as evidenced by:
Based on observation, interview, clinical record review, and review of the facility's P&P, the facility failed to accurately assess the GT (tube surgically inserted through the abdominal wall into the stomach to deliver nutrition and medication) site for one of 10 sampled residents (Resident 5). Resident 5 was receiving treatments for redness at the GT site. The nurses failed to assess the GT site daily as specified in their P&P. The wound area continued to deteriorate. The nurses failed to notify the physician and provide ongoing assessments of the wound condition. This posed the risk of Resident 5 not receiving the appropriate care and treatment.

Findings

Review of the facility's P&P titled Assessment of Skin Breakdown dated May 2014, showed the skin and/or wounds will be reassessed daily. Assessment will include centimeter measurements, characteristics of the wound bed, surrounding skin and exudates, and presence of pain associated with the wound.

Clinical record review for Resident 5 was initiated on 9/3/14. Resident 5 was admitted to the facility on 3/13/07 and readmitted on 6/17/14. Resident 5 had a G/JT tube (a combination gastric and jejeunostomy tube. Tubes surgically inserted through the abdominal wall into the stomach and intestine to deliver nutrition and medication) which was leaking and became dislodged on 9/3/14, and replaced with a temporary catheter.

Review of the physician's order dated 8/13/14,

Corrective Actions for Other Residents:

*Skin integrity is assessed daily - Incidents of skin breakdown will be documented in the resident record and comprehensive skin assessment tool and shift reassessment tool initiated and MD notified. 9/5/14

*Initial assessment will be completed, including photo and measurements of skin breakdown or redness and will be documented on the comprehensive skin assessment sheet. Re-assessment will occur every shift until the issue has resolved. 10/14/14
Initial / weekly assessment - charge nurse.
Daily monitoring - primary licensed nurse.

*New wound measurement tools, and upgraded camera and photo printer have been ordered to help in charting and monitoring the progress of identified skin problems. 10/14/14

Measures/Systemic Changes:

New skin monitoring tool is in place to directly address and facilitate the special skin assessment needs of the pediatric population. 10/14/14

only place to document this would be in the Nursing Progress/Summary Notes.

On 9/4/14 at 1530 hours, a follow-up interview and concurrent clinical record review was conducted with RN 1. When asked who was responsible for assessing the effectiveness of the skin treatments, RN 1 stated it was the RN's responsibility to assess and measure any open areas on the skin of the resident and document on the "skin sheet." She confirmed there was no "skin sheet" for Resident 5's treatments of the redness surrounding his GT. RN 1 further stated the RNs did not monitor redness even if there was a treatment. The RNs only monitored open areas on the skin.

F 328 SS=E 483.25(k) TREATMENT/CARE FOR SPECIAL NEEDS

The facility must ensure that residents receive proper treatment and care for the following special services:
Injections;
Parenteral and enteral fluids;
Colostomy, ureterostomy, or ileostomy care;
Tracheostomy care;
Tracheal suctioning;
Respiratory care;
Foot care; and
Prostheses.

This REQUIREMENT is not met as evidenced by:

Review of the physician's orders for Residents 2, 4, 5, B, C, D, E, F, and G showed the orders for the ventilator settings to include:

* Mode (refers to the method of inspiratory or breathing support from the ventilator).

* Tidal volume (the volume of gas exchanged during each breathe from the ventilator).

* Rate (the number of times per minute the ventilator pushes air into the lungs).

* PEEP (this ventilator pressure is applied at the end of expiration to hold the lungs open and thereby increase oxygenation in the lungs).

* Amount of oxygen (room air contains 21% oxygen. The physician may order more oxygen depending on the resident's condition).

* Pressure control (provides a set pressure during inspiration).

* Pressure support (a spontaneous mode of ventilation when the resident initiates every breathe and the ventilator delivers a preset pressure).

The physician's orders did not contain the orders for the high pressure alarm settings (a ventilator alarm is triggered when there is something wrong with the ventilator pressure, volume, or the rate of air being delivered. The high pressure alarm occurs if two consecutive breaths are limited because they reach the high pressure setting. Triggering of high pressure alarm is usually caused by coughing but may indicate the airway

monthly scheduled IDT meeting and modifications to orders will be made by the MD based on recommendations as appropriate.

Monitoring:

Alarm

*Audits will be conducted daily and deficiencies will be addressed immediately. Audit overall results will be included in the Performance Improvement reports for the department.

*Audit findings will be reviewed with Cardio Pulmonary staff in monthly staff meetings and/or posted for all to review.

is blocked. The high pressure alarm will continue to be triggered if pressures do not decrease below the high pressure setting. If the high pressure alarm is set too high, a potentially serious complication may not be detected timely because the ventilator alarm will be delayed.

For Resident 3, the physician's order included the mode, rate, pressure control, pressure support, PEEP, amount of oxygen, and setting for a high pressure alarm at 45 cm H2O.

Review of the 24 Hour Continuous Mechanical Ventilator Records for Residents 2, 3, 4, B, C, D, E, F, and G for August and early September 2014, showed the high pressure alarms were continuously set at 45 cm H2O. The 24 Hour Continuous Mechanical Ventilator Records for Resident 5 for August and early September 2014 showed the high pressure alarm was continuously set at 50 cm H2O.

Further review of the 24 Hour Continuous Mechanical Ventilator Records for August and early September 2014, showed the following:

* The PIP for Resident 2 ranged from 15 to 25 cm H2O (20-30 cm H2O below the high pressure alarm setting). On 8/28/14 at 1530 hours, the PIP for Resident 2 was recorded at 31 cm H2O (14 cm H2O below the high pressure alarm setting).

* The PIP for Resident 3 ranged from 15 to 25 cm H2O (20-30 cm H2O below the high pressure alarm setting).

*The PIP for Resident 4 ranged from 20 to 25 cm H2O (15-20 cm H2O below the high pressure alarm setting).

* The PIP for Resident 5 ranged from 24 to 48 cm H2O (2-26 cm below the high pressure alarm setting of 50 cm H20).

* The PIP for Resident B ranged from 14 to 20 cm H2O (25-31 cm H20 below the high pressure alarm setting).

* The PIP for Resident C ranged from 8 to 25 cm H2O (20-37 cm below the high pressure alarm setting).

* The PIP for Resident D ranged from 16 to 20 cm H2O (25-29 cm H2O below the high pressure alarm setting) . On 8/24, 8/27, and 8/29/14, the PIP for Resident D was recorded at 30 and 31 cm H2O (14-15 cm H2O below the high pressure alarms setting).

* The PIP for Resident E ranged from 14 to 27 cm H2O (18-31 cm below the high pressure alarm setting).

* The PIP for Resident F ranged from 18 to 26 cm H2O (19-27 cm H2O below the high pressure alarm setting). On 8/31/14 at 1900 hours, the PIP for Resident F was recorded at 32 cm H2O (13 cm H2O below the high pressure alarm setting).

* The PIP for Resident G ranged from 16 to 24 cm H2O (21-29 cm H2O below the high pressure alarm setting).

Review of the facility's P&P titled Mechanical Ventilator Set-Up dated May 2014, showed recommended setting for the ventilator high pressure alarm is 45 cm H2O.

During an interview with the Medical Director on 9/8/14 at 1330 hours, when asked if he approved the facility's P&P, the Medical Director stated he had reviewed and approved the facility's clinical P&P. When the facility's P&P for Mechanical Ventilator Set-up dated May 2014, showing a recommended setting for the high pressure alarm at 45 cm H2O was discussed, the Medical Director stated this P&P needed to be reviewed.

When the Medical Director was informed the RT staff had stated during the initial tour, the high pressure alarms should be set at 10 to 15 cm H2O above the residents' PIPs, the Medical Director stated in most cases, this would be the correct setting.

After the Medical Director was informed of the 24 Hour Continuous Mechanical Ventilator Records for three sampled and six nonsampled residents showed all of the ventilator high pressure alarms were set at 45 cc H2O despite the residents' varying PIPs, the Medical Director agreed the high pressure alarm was set to high

During an interview with RT 1 and the Director for Ancillary Services on 9/8/14 at 1530 hours, the findings from the 24 Hour Continuous Mechanical Ventilator Records for three sampled and six nonsampled residents were reviewed and showed all of the ventilator high pressure alarms were set at 45 cm H2O even though the residents' PIPs varied from 8 to 32 cm H2O. RT 1 and the Director for Ancillary Services agreed the high pressure alarms should have been set at 10 to 15 cm H20 above the residents' PIPs.

Review of the facility's P&P for the Ventilator Flow Sheet showed the department/team's approval

dated May 2014, and the approval by the Medical Executive Committee and the Board of Directors dated June 2014. The policy showed "...pressure alarms will be set by the RT at 10 cm - 15 cm above and/or below pressures ...unless specified by MD (medical doctor)."

During an interview and review of the Ventilator Flow Sheet P&P with RT 1 and RT 2 on 9/10/14 at 1610 hours, the two RTs were asked why the Ventilator Flow Sheet P&P differed from the Mechanical Ventilator Set-Up P&P regarding the settings for the high pressure alarm. Neither RTs were able to answer.

During a telephone interview with the Corporate RT on 9/10/14 at 1115 hours, the Corporate RT stated he was unaware of any P&P showing the recommended settings for the ventilator high pressure alarm at 45 cm H2O. When asked if the RT should be adjusting the high pressure alarm based on the resident's condition, the Corporate RT stated unless the physician had ordered the high pressure alarm to be set at a specific setting, the RT should be adjusting the high pressure alarm to be 10-20 cm H2O above the residents' PIPs.

2. According to Respiratory Board Review, tracheal tube cuffs seal off the lower airway which facilitates ventilator support without excessive gas leaks and minimizes aspiration into the lungs. The pressure used to inflate the cuff can cause damage to the surrounding tissues. If the cuff pressure is high enough to block off capillary blood flow it can cause ischemia, tissue ulceration, and necrosis. Capillary perfusion pressures range between 20-30 cm H2O. The goal is to keep the cuff pressure below these

levels.

According to the Respiratory Board Review, a MLT is used to measure cuff pressure and minimize the air leak around the tracheostomy cuff. The procedure outlined the technique to be used and recommended recording of the measured cuff pressure.

Review of the physician's orders for Resident 3 showed an order dated 1/22/14, to check the tracheostomy tube (cuff) pressure every shift and as needed and maintain the pressure at 18-20 cm H2O.

Review of the physician's orders for Resident 5 showed an order dated 6/17/14, to check the tracheostomy tube (cuff) pressure every shift and as needed and maintain the pressure at 18-20 cm H2O.

The Medical Director was the primary care physician for both Residents 3 and 5.

During an interview, concurrent clinical record review, and review of the facility's P&P with RT 1 and RT 2 on 9/10/14 at 1610 hours, the physician's orders and the 24 hour Mechanical Ventilator Record for Residents 3 and 5 were reviewed. The physician's orders showed to check the tracheostomy tube pressure every shift and as needed and maintain the pressure at 18-20 cm H2O. The designated area to document the cuff pressure on the 24 hour Mechanical Ventilator Record showed the MLT, however, the documentation failed to show the amount of pressure determined. RT 1 stated she had already spoken to the Medical Director about the order to check Residents 3's and 5's

F 328 Continued From page 26

tracheostomy tube cuff pressures. RT 1 stated the Medical Director indicated the order needed to be clarified because the facility used the MLT to ensure the tracheostomy cuff was not overly inflated. RT 1 stated the RT was to record just "MLT" on the 24 hour Mechanical Ventilator Record, not the actual tracheostomy cuff pressure. Review of the facility's P&P titled Ventilator Flow Sheet dated May 2014, showed the various procedures for completing the data on the 24 hour Mechanical Ventilator Record. The section to document the cuff pressure showed "observed amount of pressure (cm of H2O/MLT/MOV minimal occluding volume) in ..tracheostomy tube cuff." RT 1 verified the RT's document of "MLT" under cuff pressure not the actual cuff pressure.

When the physician's order for checking the tracheostomy cuff pressure for Residents 3 and 5 were reviewed with RT 1, RT 1 agreed the order required documentation of the actual cuff pressure, not the "MLT."

RT 1 also agreed if the physician's orders needed to be clarified, the clarification should have been done at the time the order was written, not months later.

F 371 SS=E 483.35(i) FOOD PROCURE, STORE/PREPARE/SERVE - SANITARY

The facility must -
(1) Procure food from sources approved or considered satisfactory by Federal, State or local authorities, and
(2) Store, prepare, distribute and serve food under sanitary conditions

F 328 **483.35(i) FOOD PROCURE, STORE/PREPARE/SERVE - SANITARY**

**F371**

Corrective Actions Taken for Affected Residents:

*Immediate replacement of dented, discolored, pitted, bowed cookware was accomplished. 9/4/14

*Repair of the wall board, removal of the silver-colored tape and repair of the torn cove base was done. 10/6/14

*("Cove base is a type of trim that is installed along the base of an interior wall where the wall meets the floor. It is primarily made of vinyl or rubber and is used to protect the base of a wall from damage and to provide a finished and more aesthetically pleasing look where it is installed.")*

F 371

Corrective Actions for Other Residents:

This REQUIREMENT is not met as evidenced by:
Based on observation and interview, the facility failed to complete preventive maintenance in the kitchen to decrease the likelihood of harborage sites for pest infestations. Additionally, multiple cooking pots had bowed bottoms and pitting on the inside of the pots. Bowed bottoms of the cooking pots had the potential for the pots to rock on the stove and spill hot contents onto the staff using them. Pots with pitting were more apt to leach aluminum into foods and gave food an off taste.

Findings:

During a tour of the kitchen on 9/8/14 at 1200 hours, with the RD and the DSS, the wall beneath the sinks near the puree station was tapped using a yardstick. The wall board was spongy and moveable when pressed with the yardstick. The moveable section was approximately four feet wide. Additionally, silver colored tape was observed on the linoleum coving next to the walk-in refrigerator. The RD and DSS agreed with these findings.

An observation was made of a pot on a stove burner which appeared to be leaning to one side. The pot contained approximately two inches of warm water. When the pot was touched it rocked from side to side. The bottom of the pot was bowed outward. The RD agreed with this finding.

During an inspection of all of the cooking

This deficiency has no direct impact on the Pediatric Sub Acute resident population; as the resident involved is the only one currently in residence that is able to take food PO (by mouth). All other residents of the Pediatric Sub Acute unit are NPO (nothing by mouth) and are fed exclusively by gastrostomy (GT) tube.

Measures/Systemic Changes:

*Nutrition Services will conduct daily inspections of the kitchen to identify problems, including cookware needing to be replaced, and to identify potential repairs needed for walls, coves, etc.. 9/5/14

Monitoring:

*Monthly Environment of Care rounds will be completed in the kitchen and include cookware needing to be replaced, and to identify potential repairs needed for walls, coves, etc..

*Kitchen checklist was revised to include cookware. 10/9/14

F 371 Continued From page 28

equipment, eight large pots and three medium pots were observed having bowed bottoms. Two medium pots and one large pot were observed to have pitting in the bottom and sides. One large colander was dented and showed black discoloration on the outside bottom.

The RD agreed with these findings.

F 428 SS=D 483.60(c) DRUG REGIMEN REVIEW, REPORT IRREGULAR, ACT ON

The drug regimen of each resident must be reviewed at least once a month by a licensed pharmacist.

The pharmacist must report any irregularities to the attending physician, and the director of nursing, and these reports must be acted upon.

This REQUIREMENT is not met as evidenced by:
Based on interview and clinical record review, the facility failed to ensure the drug regimen review was completed and irregularities were reported for one of 10 sampled residents (Resident 8). Failure to review a medication ordered an excessive dose and make recommendations had the potential for this resident to have an adverse reaction or an overdose.

Findings:

Clinical record review for Resident 8 was initiated

F 371

Person(s) Responsible:

Director of Dietary and Director of Engineering

F 428

**483.60(c) DRUG REGIMEN REVIEW, REPORT IRREGULAR, ACT ON**

**F428**

Corrective Actions Taken for Affected Residents:

Resident 8:

*Physician's PRN (as needed) order for Ativan was changed to include a maximum 24 hours dose not to exceed 10 mg. 9/4/14

Corrective Actions for Other Residents:

*Review was completed of all residents with PRN Ativan orders, as well as other PRN orders, to ensure that maximum dose limits are included where needed. 9/5/14

2014 OCT 16 PM 1:03

on 9/4/14. Resident 8 was admitted to the facility on _____with diagnoses including tuberous sclerosis [a rare genetic incurable disease that causes noncancerous (benign) lesions to grow in many parts of the body. It may effect the brain, lungs, and kidneys. Lesions in the brain can be associated with seizures, intellectual disability, learning disabilities or developmental delays] and seizures.

Review of the physician's orders showed an order dated 8/14/13, to administer lorazepam (anti-anxiety medication) 2 mg every four hours as needed for agitation (a total 24 hour dose equaling 12 mg). Review of the MAR for July and August 2014, showed no as needed doses of lorazepam had been given.

Review of Lexi-comp, an online drug reference for healthcare professionals showed the total oral dose of lorazepam ordered for anxiety disorders is 1 mg to 10 mg daily in divided doses; the usual dose is 2-6 mg daily in divided doses.

During a telephone interview with the pharmacist on 9/4/14 at 1600, the pharmacist stated she did the drug regimen review for the facility in July and August 2014. When asked if she had made any recommendations for the lorazepam 2 mg every four hours as needed ordered for Resident 8, the pharmacist stated she did not make any recommendations because Resident 8 had not received any doses of lorazepam in July 2014 or August 2014. When asked if the 2 mg dose was of concern, the pharmacist stated she was not concerned because Resident 8 had not received any doses in July 2014 or August 2014. When asked what would happen if a nurse gave the lorazepam as ordered and Resident 8 received

Measures/Systemic Changes:

*Review of findings with Omnicare (contracted pharmacy) for educational purposes was done to insure that pharmacist is able to identify order issues specific to PRN daily dosing limits in the future. 10/16/14

*Monthly review of the appropriateness of anti-psychotic medication dosing will be done at monthly IDT meetings. 10/16/14

*Monthly pharmacist review of each resident's medication regiment is being done. The monthly review report is forwarded to the Pediatric Sub-Acute DON and CNO. All recommendations requiring modification will be followed up by DON or designee with the MD for modification or clarification as needed 10/16/14

2014 OCT 15 PM 1 03

Monitoring:

Monthly drug review is completed by pharmacy and reviewed at IDT meetings 9/28/14

F 428 Continued From page 30

12 mg of lorazepam in 24 hours, the pharmacist responded that would be a change of condition and the nurse would have called the physician before giving all 12 mg in 24 hours. When reminded the physician's order for lorazepam did not contain any specific instructions to call the physician after a certain number of doses, the pharmacist agreed. When asked if the nurse followed the physician's order as written and did not question the dosing of lorazepam, then Resident 8 could receive 12 mg of lorazepam in a 24 hour period. The pharmacist agreed and stated she would do a recommendation in September 2014, to discontinue the lorazepam if no doses had been given.

During an interview with the Medical Director on 9/8/14 at 1330 hours, the order for lorazepam 2 mg every four hours as needed for agitation for Resident 8 and the findings in Lexi-comp for a total daily dose of lorazepam was 1 to 10 mg was reviewed. The Medical Director agreed with the potential for Resident 8 to receive 12 mg in 24 hours seemed to be an excessive dose and needed to be reviewed.

F 441 SS=F 483.65 INFECTION CONTROL, PREVENT SPREAD, LINENS

The facility must establish and maintain an Infection Control Program designed to provide a safe, sanitary and comfortable environment and to help prevent the development and transmission of disease and infection.

* The facility failed to use the infection control surveillance data to monitor the use of unnecessary antibiotics for conditions not meeting McGeer's Criteria (a symptom based criteria to identify true infections in long-term nursing facilities). In addition, the facility did not document the symptoms associated with infections, which was an important part of the McGeer's criteria. This had the potential for unnecessary use of antibiotics, which could contribute to the development of antibiotic resistant bacteria and could cause a secondary infection such as C-diff (a bacterium causing severe diarrhea).

* The facility failed to document any infection control surveillance for the months of January and February 2014. This had the potential for an infection outbreak to go unrecognized.

* Resident 5 had signs and symptoms of a C-diff infection. However, the facility did not implement isolation precautions while waiting for Resident 5's culture (a laboratory test taking approximately 72 hours to determine if infectious bacteria is present) was being processed. This had the potential for other residents to be exposed to infection.

* Teacher 1 did not follow proper infection control practices to minimize the risk of spread of infections in the facility.

Findings:

According to the CDC, each year in the United States at least 2 million people become infected with bacteria that are resistant to antibiotics and

*All residents are being reviewed daily and new potential infections and/or antibiotic usage is entered into the infection control log for further investigation. 9/8/14

*Enhanced standard precautions were initiated for all residents. A new policy and procedure was introduced and contained procedures for identification and isolation of actual and/or suspected C diff infections. All staff who enters resident rooms received in-service education regarding the new enhanced procedures. All EMT and other unscheduled non-staff individuals who enter resident rooms receive instruction upon arrival, prior to their interaction with the resident. 10/15/14

*Any new teachers and other scheduled non-staff individuals who enter resident rooms receive infection control instruction upon arrival, prior to their interaction with the resident. 10/15/14

facility did not have an infection control nurse on staff.

Review of the Subacute Infection Control Logs which included the facility's infection control surveillance showed the log had columns for staff to document resident name, room number, presumptive diagnosis such as a UTI, infectious organism, if the resident was placed in isolation, any pertinent laboratory results, the treatment given and the dates the infection started and resolved. However, the log did not have a column or an area for staff to identify the resident's signs or symptoms of the infection (i.e. fever, cough or changes in the color of sputum or urine) as specified in McGeer's criteria. In addition, there was no area to document if the infection met McGeer's criteria and considered a true infection, which would help identify unnecessary antibiotic usage.

a. Review of the Subacute Infection Control Log for November 2013, showed a total of three infections documented for the month. Two of the infections were UTIs and one infection was pneumonia. Both UTI were identified to have cultures done. A culture is a test to determine the amount and type of bacteria present in the specimen, in this case urine. According to McGeer's criteria, the amount of bacteria present must be greater than 100,000 to be considered a true infection.

Further review of the Subacute Infection Control Logs showed incomplete documentation. For example:

* The column entitled "Pertinent Lab (laboratory) or X-ray Findings" showed no documentation

Monitoring:

*The infection control practitioner will prepare monthly summaries of the infection control log including antibiotic usage, infections using McGeer's criteria, isolation, trends, etc. The report will be reviewed by the unit Medical Director and CNO for completeness. The report along with a summary of other infection control monitors will be reported to the Organization-Wide Infection Control Committee and Quality Council on a quarterly basis unless there are significant opportunities for improvement noted in the interim.

*Results of monitoring adherence to enhanced standard precautions are presented monthly to the Pediatric Unit Medical Director and other leadership. The results are reported to the Organization-Wide Quality Council on a quarterly basis unless there are significant opportunities for improvement noted in the interim.

*Results of monitoring adherence to infection control standards are

culture reports he received from the nursing staff. He was asked based on the information provided on the Subacute Infection Control Logs, whether he could determine if the residents had a true infection or were being treated with unnecessary antibiotics. He stated based on the Subacute Infection Control Logs he could not determine this information. The CNO was asked if the facility was monitoring for the use of unnecessary antibiotics. The CNO stated, "No not yet." He also stated he had just hired an infection control nurse. The CNO was asked about the missing information, such as the culture results, resident specific signs and symptoms of the infection, and the medication used to treat the infection. The CNO verified he had not been documenting this information on the logs. He stated he was not aware this information was needed. He stated the infection control committee had last met in April 2014, and he had reported the infection control rates at that time. He stated he was not aware the unnecessary antibiotic usage should be part of the surveillance.

2.a. On 9/3/14 at 0745 hours, Resident 5 was observed in bed. A sign posted on the wall outside the room showed Resident 5 was on contact isolation precautions (isolation requiring staff to wear gown, gloves, and mask if they may come in contact with any body secretions or fluids).

Clinical record review for Resident 5 was initiated on 9/3/14. Resident 5 was readmitted to the facility on 6/17/14, with diagnoses including history of partial small bowel obstruction and history of recurrent intermittent ileus (disruption of the muscle contractions of the intestines stopping

the movement of food and fluid through the digestive system). Resident 5 was ventilator dependent.

Review of the H&P dated 6/23/14, showed Resident 5 was to be placed on isolation.

Review of a care plan problem dated 6/17/14, addressed the Resident 5's infections of VRE, MRSA, and ESBL (multi-drug resistant organisms where the bacteria is resistant to many antibiotics) and contact isolation precautions.

Review of the physician's orders for Resident 5 failed to find an order for contact isolation.

Review of the facility P&P titled Infection Control dated 11/2010, showed the physician had to write an order on what extra precautions were necessary.

On 9/4/14 at 1100 hours, an interview with LVN 4 was conducted. LVN 4 was unable to find an order for contact isolation for Resident 5.

b. Further review of the physician's orders for Resident 5 showed an order dated 7/6/14, for stool culture for C-diff.

Review of the nursing progress summary notes dated 7/4/14, showed Resident 5 had a total of 9 BMs for that day. On 7/5/14, the resident had a total of 6 BMs for that day. On 7/6/14 at 1130 hours, staff documented Resident 5 has loose yellow stool, with a total of 6 BMs for that day.

On 9/8/14 at 1010 hours, an interview with RN 2 was conducted regarding Resident 5. RN 2 stated the resident's C-diff culture was obtained

due to the resident experiencing more than normal BMs. She stated if a resident had C-diff due to the symptoms of more than normal loose BMs, they would have placed the resident in a private room. When asked if Resident 5 was transferred to a private room when the symptoms were observed. RN 2 stated, "No, he remained in the same room with his current roommate." RN 2 stated the roommate did not have any symptoms of C-diff.

c. On 9/8/14 at 0840 hours, two EMTs entered Resident 5's room with a gurney. EMT 1 was wearing gloves and a mask and EMT 2 was only wearing gloves. Neither EMTs were wearing a gown. The EMTs were accompanied by an RT from the EMT company. This RT was wearing a mask and gloves. In addition, the facility's RT 5 was in Resident 5's room and was observed to be wearing a gown, a mask, and gloves.

The RT from the EMT company stood at Resident 5's bedside on the nonventilator side of the bed. He turned on the portable ventilator located on the gurney, checked the ventilator settings, and then removed Resident 5 from the facility's ventilator and attached the resident to the portable ventilator.

EMT 1 was observed to lift Resident 5 off of the bed and placed her onto the gurney. Neither EMTs removed or changed their gloves or attempted to sanitize or wash their hands before they exited the resident's room.

The RT from the EMT company removed the gloves and a mask while inside the resident's room and used a sanitizing hand gel on his hands as he exited the room.

F 441 Continued From page 39

During this observation, RT 5 did not provide any directions to either EMT company staff regarding the contact isolation precautions for Resident 5.

3. On 9/4/14 at 1030 hours, an observation was made of a teacher (Teacher 1) walking down the hallway holding a tray containing small cut pieces of purple tissue paper and a bottle of tacky glue. As the teacher was walking down the hallway, three small pieces of the tissue paper flew off of the tray and landed on the floor. Teacher 1 bent down, retrieved the pieces of tissue paper, and replaced the pieces back onto the tray. Teacher 1 continued down the hallway to Room A, placed the tray down on the isolation cart, and opened one drawer to retrieve an isolation gown.

However, before Teacher 1 retrieved a gown she was asked about the above observation. The teacher agreed this was the sequence of events. When asked what procedure she should have followed when the papers fell off of the tray. The teacher stated she should have discarded the pieces of tissue and washed her hands before proceeding on to a resident's room.

F 518 SS=E 483.75(m)(2) TRAIN ALL STAFF-EMERGENCY PROCEDURES/DRILLS

The facility must train all employees in emergency procedures when they begin to work in the facility, periodically review the procedures with existing staff, and carry out unannounced staff drills using those procedures.

This REQUIREMENT is not met as evidenced by:

at least 23,000 people die each year as a direct result of these infections. Many more people die from other conditions that were complicated by an antibiotic-resistant infection. Studies indicate that 30-50% of antibiotics prescribed in hospitals are unnecessary or inappropriate. "There is no doubt that overprescribing and misprescribing is contributing to the growing challenges posed by C-diff and antibiotic-resistant bacteria." Most deaths related to antibiotic resistance happen in healthcare settings, such as hospitals and nursing homes. Studies demonstrate that improving prescribing practices in hospitals can not only help reduce rates of C-diff infection and antibiotic resistance but can also improve individual patient outcomes, all while reducing healthcare costs. A CDC analysis of data regarding antibiotics prescribed in hospitalized patients, showed a 30% reduction in use of broad-spectrum antibiotics would result in a 26% reduction in C-diff infections. In addition, improvement of physician antibiotic prescribing habits from overuse and incorrect use would also help to reduce antibiotic resistance.

According to Medscape.com, C-diff colitis results from a disturbance of the normal bacterial flora of the colon and the release of toxins that cause mucosal inflammation and damage. Antibiotic therapy is the key factor that alters the colonic flora causing C-diff infections.

1 An interview and concurrent clinical record review of the Subacute Infection Control Logs was initiated with the CNO on 9/4/14 at 1345 hours. The CNO stated the facility was using McGeer's criteria to determine the facility's infection rates. The CNO stated he was completing the logs monthly. He stated the

Measures/Systemic Changes:

*A dedicated/qualified infection control practitioner has been recruited and hired to oversee the infection control process. The infection control log has been modified to include the necessary information needed to properly monitor infections on the unit and detect trends in infections and/or antibiotic usage. 10/10/14 9/8/14

*Direct observation of adherence to enhanced standard precautions is being accomplished. A monitoring tool has been developed and will be used to perform direct observation of compliance to the precautions. 10/15/14 Monthly for 6 months and then quarterly thereafter with annual evaluation for need to continue.

*Direct Observation of adherence to infection control practices is being accomplished. A monitoring tool has been developed and will be used to perform direct observation of compliance. 10/15/14

Exception No. 2: In smoke compartments protected throughout by an approved, supervised automatic sprinkler system in accordance with 19.3.5.2, the door construction requirements of 19.3.6.3.1 shall not be mandatory, but the doors shall be constructed to resist the passage of smoke.

NFPA 80, Standard for Fire Doors and Fire Windows, 1999 Edition
2-4.1.4. All closing mechanisms shall be adjusted to overcome the resistance of the latch mechanism so that positive latching is achieved on each door operation.

19.3.6.3.3* Hold-open devices that release when the door is pushed or pulled shall be permitted

A 19.3.6.3.3 Doors should not be blocked open by furniture, door stops, chocks, tie backs, drop down or plunger type devices, or other devices that necessitate manual unlatching or releasing action to close. Examples of hold-open devices that release when the door is pushed or pulled are friction catches or magnetic catches.

Findings:

During a tour of the facility with the Director of Plant Operations, and the Chief of Ancillary Services on 9/9/14, the doors in the facility were observed, and a staff person was interviewed

1. At 9:40 a.m., the self-closing corridor door to the Staff Break Room, was impeded from closing with a brown rubber wedge under the door.

2. At 10:59 a.m., the self-closing corridor door to Physical Therapy/Rehab, was impeded from

closing with a brown rubber wedge under the door

3. At 11:00 a.m., the Director of Plant Operations said during an interview that he checked all of the doors yesterday and they were not wedged open.

K 025 NFPA 101 LIFE SAFETY CODE STANDARD
SS=E

Smoke barriers are constructed to provide at least a one half hour fire resistance rating in accordance with 8.3. Smoke barriers may terminate at an atrium wall. Windows are protected by fire-rated glazing or by wired glass panels and steel frames. A minimum of two separate compartments are provided on each floor. Dampers are not required in duct penetrations of smoke barriers in fully ducted heating, ventilating, and air conditioning systems. 19.3.7.3, 19.3.7.5, 19.1.6.3, 19.1.6.4

This STANDARD is not met as evidenced by:
Based on observation, the facility failed to maintain the integrity of the fire resistance rated construction of its smoke barrier walls. This was evidenced by an unsealed penetration. This could result in the reduction in staff ability to protect in place due to smoke and fire. This affected 2 of 3 smoke compartments.

NFPA 101, Life Safety Code, 2000 Edition
19.3.7.3 Any required smoke barrier shall be constructed in accordance with Section 8.3 and shall have a fire resistance rating of not less than 1/2 hour.

K 018

K 025

**NFP 101 Life Safety code Standard**

**K025**

Immediate Actions Taken:

The noted unsealed pipe penetration was sealed with the proper fire caulking. All other smoke barriers were inspected and no other unsealed penetrations were found. 9/9/14

Systemic Changes: 9/24/14

All work done above the ceiling by contractors and/or in-house personnel will be required to obtain an "above the ceiling work permit" that includes a final inspection of any work done to insure that any penetrations are properly sealed.

Monitoring:

All above the ceiling work will be monitored through the work permit process. Monthly life safety inspections will include observation of smoke barrier walls. Work permits and inspections will be reported through the quality assurance reports at the Leadership Team meetings and the

This STANDARD is not met as evidenced by:
Based on observation and interview, the facility failed to maintain its portable fire extinguishers. This was evidenced by a portable fire extinguisher that was obstructed from access. This could result in a delay of access to the fire extinguisher in the event of a fire. This affected 1 of 3 smoke compartments.

NFPA 101, Life Safety Code, 2000 Edition
9.7.4 Manual Extinguishing Equipment.
9.7.4.1* Where required by the provisions of another section of this Code, portable fire extinguishers shall be installed, inspected, and maintained in accordance with NFPA 10, Standard for Portable Fire Extinguishers.

NFPA 10, Standard for Portable Fire Extinguishers, 1998 Edition
1-6.3 Fire extinguishers shall be conspicuously located where they will be readily accessible and immediately available in the event of fire. Preferably they shall be located along normal paths of travel, including exits from areas.

Findings:

During a tour of the facility with the Director of Plant Operations, and the Chief of Ancillary Services on 9/9/14, the portable fire extinguishers were observed, and staff was interviewed.

1. At 9:51 a.m. there was a fire extinguisher near the soiled utility Room/Bio-Hazard Room near shower B, that was impeded from access with a three drawer dresser in front of the device.

Systemic Changes: 9/25/14

Remedial instruction was given for all staff members in the proper clearance required to maintain access to all fire extinguishers. In addition, signage was placed on each fire extinguisher cabinet as a reminder.

Monitoring:

Proper clearance for all fire extinguishers is being monitored during monthly Safety Rounds as well as daily during charge nurse rounds. Results of the monitoring will be reported through the quality assurance reports at the Leadership Team meetings and the hospital Quality Assurance meeting at least quarterly in order to evaluate the POCs effectiveness. . Any deficiencies noted in the interim will be immediately corrected.

## (For Plan of Correction)

**Notice to Licensee/Designee**

The surveying state agency is required to obtain a signed plan of correction for deficiencies noted on the Statement of Deficiencies and Plan of Correction (Code of Federal Regulations, Title 42, Section 489.13; State Operations Manual, Section 2612; and California Health and Safety Code, Section 1280). By signing a plan of correction, a licensee or designee does not necessarily admit guilt of any alleged violation nor does this interfere with the right to contest or appeal any alleged violations on which the plan of correction is based or the same period for correction. It does acknowledge responsibility for compliance with licensing requirements, with appropriate requirements of the Medicare and Medi-Cal programs, that an exit conference was held during which the items listed were discussed, and that a copy of the deficiency/report and plan of correction was received.

**IMPORTANT NOTICE - PLEASE READ CAREFULLY**

July 13, 2015

Darrin Buckner, RN
Director of Subacute
Southern California Hosp At Culver City D/p Snf
3828 Delmas Terrace
Culver City, CA 90230

Dear Administrator:

On June 22, 2015, a standard annual Health and Life Safety Code survey was conducted at your facility by the California Department of Public Health, Licensing and Certification Program (Los Angeles Acute - South), to determine if your facility was in compliance with federal participation requirements for nursing homes participating in the Medicare and/or Medicaid programs.

This survey found the most serious deficiency(ies) to be:

[ ] Isolated deficiencies that constitute no actual harm with potential for more than minimal harm that is not immediate jeopardy, as evidenced by the enclosed "Statement of Deficiencies and Plan of Correction" form, whereby corrections are required (D).

[x] A pattern of deficiencies that constitute no actual harm with potential for more than minimal harm that is not immediate jeopardy, as evidenced by the enclosed "Statement of Deficiencies and Plan of Correction" form, whereby corrections are required (E).

The enclosed Centers for Medicare and Medicaid Services (CMS) form, entitled "Statement of Deficiencies and Plan of Correction" (CMS-2567), documents the deficiencies of participation requirements identified during this visit. All references to regulatory requirements contained in this letter are found in Title 42, Code of Federal Regulations (CFR).

**Plan of Correction (POC)**

A POC for the deficiencies must be submitted within **ten (10) days from receipt of the CMS- 2567.** Failure to submit an acceptable POC by the due date will result in remedies being recommended for imposition by the CMS and/or the State Medicaid Agency effective as soon as notice requirements are met.

Your POC must be submitted on the enclosed CMS-2567 form and must contain the following:

- How corrective action(s) will be accomplished for those residents found to have been affected by the deficient practice;
- How the facility will identify other residents having the potential to be affected by the same deficient practice and what corrective action will be taken;
- What measures will be put into place or what systemic changes the facility will make to ensure that the deficient practice does not recur;
- How the facility plans to monitor its performance to make sure that solutions are sustained. The facility must develop a plan for ensuring that correction is achieved and sustained. This plan must be implemented, and the corrective action evaluated for its effectiveness. The POC is integrated into the quality assurance system; and
- Include dates when corrective action will be completed. The corrective action completion dates must be acceptable to the State Agency.

Remedies will be recommended for imposition by the CMS Regional Office and/or the State Medicaid Agency if your facility has failed to achieve substantial compliance by .

**Recommended Remedies**

The remedies, which will be recommended if substantial compliance has not been achieved by July 23, 2015 , include the following:

[ x ] Civil money penalty of $ 150.00 , effective June 22, 2015 (§488.430).

We are also recommending to the CMS Regional Office and/or the State Medicaid Agency that your provider agreement be terminated on if substantial compliance is not achieved by that time.

**Denial of Payment for New Admissions (DPNA)**

Based on deficiencies cited during this survey and as authorized by CMS San Francisco Regional Office, we are giving formal notice of imposition of statutory DPNA effective September 22, 2015. This remedy will be effectuated on the stated date unless you demonstrate substantial compliance with an acceptable POC and subsequent revisit. This notice in no way limits the prerogative of CMS to impose discretionary DPNA at any appropriate time.

CMS Regional Office will notify your intermediary and the Medicaid Agency. If effectuated, denial of payment will continue until your facility achieves substantial Compliance or your provider agreement is terminated. Facilities are prohibited from billing those Medicare/Medicaid residents or their responsible parties during the denial period for services normally billed to Medicare or Medicaid.

**Appeal Rights**

If you disagree with the determination of noncompliance (and/or substandard quality of care, if applicable), you or your legal representative may request a hearing before an administrative law judge of the Department of Health and Human Services, Departmental Appeals Board. Procedures governing this process are set out in 42 CFR §498.40, et. seq. You may appeal the finding of noncompliance that led to an enforcement action, but not the enforcement action or remedy itself. A written request for hearing must be filed no later than 60 days from the date of receipt of this letter.

Such written request should be made directly to:

***Attention: Ms. Karen Robinson***
***Departmental Appeals Board***
***Civil Remedies Division***
***Cohen Building, Room G-644***
***330 Independence Avenue S.W.***
***Washington, D.C. 20201***

A request for hearing should identify specific issues, and the findings of fact and conclusions of law with which you disagree. It should also specify the basis for contending that the findings and conclusions are incorrect. You may be represented at a hearing by counsel at your own expense.

Be sure to include a copy of this letter with your request to the Departmental Appeals Board. In addition, please forward a copy of your request to:

***Attention: Paula Perse, Manager***
***Long Term Care Branch***
***Division of Survey and Certification***
***Centers for Medicare & Medicaid Services***
***90 7th Street, Suite 5-300 (5W)***
***San Francisco, CA 94103-6707***

**Alternatively, you can file your appeal electronically at the Departmental Appeals Board Electronic Filing System Web site (DAB E-File) at https://dab.efile.hhs.gov.**

To file a new appeal using DAB E-File, you first need to register a new account by: (1) clicking **Register** on the DAB E-File home page; (2) entering the information requested on the "Register New Account" form; and (3) clicking **Register Account** at the bottom of the form. If you have more than one representative, each representative must register separately to use DAB E-File on your behalf.

The e-mail address and password provided during registration must be entered on the login screen at https://dab.efile.hhs.gov/user_sessions/new to access DAB E-File. A registered user's access to DAB E-File is restricted to the appeals for which he or she is a party or authorized representative. Once registered, you may file your appeal by:

-Clicking the **File New Appeal** link on the Manage Existing Appeals screen, then clicking Civil Remedies Division on the File New Appeal screen.
And,
-Entering and uploading the requested information and documents on the "File New Appeal-Civil Remedies Division" form.

At minimum, the Civil Remedies Division (CRD) requires a party to file a signed request for hearing and the underlying notice letter from CMS that sets forth the action taken and the party's appeal rights. All documents must be submitted in Portable Document Format ("PDF"). Any document, including a request for hearing, will be deemed to have been filed on a given day, if it is uploaded to DAB E-File on or before 11:59 p.m. ET of that day. A party that files a request for hearing via DAB E-File will be deemed to have consented to accept electronic service of appeal-related documents that CMS files, or CRD issues on behalf of the Administrative Law Judge, via DAB E-File. Correspondingly, CMS will also be deemed to have consented to electronic service. More detailed instructions on DAB E-File for CRD cases can be found by clicking the CRD E-File Procedures link on the File New Appeal Screen for CRD appeals.

If you choose to file your appeal electronically, please also send a copy of the hearing request to:

**Attention: Paula Perse, Manager**
**Long Term Care Branch**
**Division of survey and Certification**
**Centers for Medicare & Medicaid Services**
**90 7th Street, Suite 5-300 (5W)**
**San Francisco, CA 94103-6707**

**Allegation of Compliance**

If you believe these deficiencies have been corrected, you may submit your POC as your allegation of compliance to Eric Stone, Program Manager, California Department of Public Health, Licensing and Certification Program, Los Angeles Acute and Ancillary Unit - South, 3400 Aerojet Suite 323 El Monte, CA 91731. We may accept your POC as your allegation of compliance and presume compliance until substantiated by a revisit or other means. In such a case, neither the CMS Regional Office nor the State Medicaid Agency will impose the previously recommended remedy(ies) at that time.

If, upon a subsequent revisit or by other means it is determined your facility has not achieved substantial compliance, we will recommend the remedies previously mentioned in this letter be imposed by the CMS Regional Office beginning on June 22, 2105 and continue until substantial compliance is achieved. Additionally, the CMS Regional Office may impose a revised remedy(ies), based upon changes in the seriousness of the noncompliance at the time of the revisit, if appropriate.

**Informal Dispute Resolution**

In accordance with §488.331, you have one (1) opportunity to question cited deficiencies through an informal dispute resolution process. To be given such an opportunity, you are required to send your written request, along with the specific deficiencies being disputed, and relevant information (evidence) as to why you are disputing those deficiencies to Suzette Leverett - Clark, RN Assistant Chief, California Department of Public Health, Licensing and Certification Division at 12440 East Imperial Highway Room 522, Norwalk, CA 90650.

This request must be sent during the same ten (10) days you have for submitting a POC for the cited deficiencies. An informal dispute resolution for the cited deficiencies will not delay the imposition of the recommended enforcement actions. A change in the seriousness of the noncompliance may result in a change in the remedy selected. When this occurs, you will be advised of any change in remedy.

**Should CMS determine that termination or any other remedy is warranted, they will provide you with a separate formal notification of that determination.**

If you have questions concerning the instructions contained in this letter, please contact, Eric Stone, Program Manager, at (626) 312-1142.

Sincerely,

Nwamaka Oranusi, Acting Chief
Health Facilities Inspection Division

Rosario Quispe RN, Sr. HFEW for

# SIGNATURE REQUIREMENT NOTICE
## (For Plan of Correction)

**Notice to Licensee/Designee**

The surveying state agency is required to obtain a signed plan of correction for deficiencies noted on the Statement of Deficiencies and Plan of Correction (Code of Federal Regulations, Title 42, Section 489.13; State Operations Manual, Section 2612; and California Health and Safety Code, Section 1280). By signing a plan of correction, a licensee or designee does not necessarily admit guilt of any alleged violation nor does this interfere with the right to contest or appeal any alleged violations on which the plan of correction is based or the same period for correction. It does acknowledge responsibility for compliance with licensing requirements, with appropriate requirements of the Medicare and Medi-Cal programs, that an exit conference was held during which the items listed were discussed, and that a copy of the deficiency/report and plan of correction was received.

| Name of facility | City |
|---|---|
| Southern California Hosp at Culver City SNF/DP | Culver City |

Copy of this notice received:

| Licensee or designee signature | Date |
|---|---|
| [signature] | 7/20/15 |

Copy of this notice presented to licensee or designee:

| Licensing Evaluator signature | Date |
|---|---|
| Rosario Bosque for Sirtin Chang | 7/13/15 |

**Complaint Notice**

If there should be disagreement between the Licensee or Designee and the Evaluator of the Survey Team on an interpretation of the regulations or a field decision, the Licensee of Designee may wish to call and discuss this with the District Licensing Supervisor.

| Name of Licensing Supervisor | Telephone |
|---|---|
| Eric Stone, Program Manager | 626-312-1142 |

**Instructions**

This notice is to be used with Plans of Correction for Skilled Nursing Facilities, Intermediate Care Facilities, Intermediate Care Facilities/Developmentally Disabled, Intermediate Care Facilities/Developmentally Disabled-Habilitative, Intermediate Care Facilities/Developmentally Disabled-Nursing, Congregate Living Health Facilities, Pediatric Day Health and Respite Care Facilities, and Hospitals with Distinct Part Skilled Nursing Facilities or Intermediate Care Facilities. It is to be signed by the licensee/designee and the licensing evaluator. A copy is left with the licensee/designee and the original is kept in the district office licensing file.

**IMPORTANT NOTICE - PLEASE READ CAREFULLY**

July 13, 2015

Darrin Buckner, RN
Director of Subacute
Southern California Hosp At Culver City D/p Snf
3828 Delmas Terrace
Culver City, CA 90230

Dear Administrator:

On June 22, 2015, a standard annual Health and Life Safety Code survey was conducted at your facility by the California Department of Public Health, Licensing and Certification Program (Los Angeles Acute - South), to determine if your facility was in compliance with federal participation requirements for nursing homes participating in the Medicare and/or Medicaid programs.

This survey found the most serious deficiency(ies) to be:

[ ] Isolated deficiencies that constitute no actual harm with potential for more than minimal harm that is not immediate jeopardy, as evidenced by the enclosed "Statement of Deficiencies and Plan of Correction" form, whereby corrections are required (D).

[x] A pattern of deficiencies that constitute no actual harm with potential for more than minimal harm that is not immediate jeopardy, as evidenced by the enclosed "Statement of Deficiencies and Plan of Correction" form, whereby corrections are required (E).

The enclosed Centers for Medicare and Medicaid Services (CMS) form, entitled "Statement of Deficiencies and Plan of Correction" (CMS–2567), documents the deficiencies of participation requirements identified during this visit. All references to regulatory requirements contained in this letter are found in Title 42, Code of Federal Regulations (CFR).

**Plan of Correction (POC)**

A POC for the deficiencies must be submitted within **ten (10) days from receipt of the CMS- 2567.** Failure to submit an acceptable POC by the due date will result in remedies being recommended for imposition by the CMS and/or the State Medicaid Agency effective as soon as notice requirements are met.

Your POC must be submitted on the enclosed CMS-2567 form and must contain the following:

- How corrective action(s) will be accomplished for those residents found to have been affected by the deficient practice;
- How the facility will identify other residents having the potential to be affected by the same deficient practice and what corrective action will be taken;
- What measures will be put into place or what systemic changes the facility will make to ensure that the deficient practice does not recur;
- How the facility plans to monitor its performance to make sure that solutions are sustained. The facility must develop a plan for ensuring that correction is achieved and sustained. This plan must be implemented, and the corrective action evaluated for its effectiveness. The POC is integrated into the quality assurance system; and
- Include dates when corrective action will be completed. The corrective action completion dates must be acceptable to the State Agency.

Remedies will be recommended for imposition by the CMS Regional Office and/or the State Medicaid Agency if your facility has failed to achieve substantial compliance by .

**Recommended Remedies**

The remedies, which will be recommended if substantial compliance has not been achieved by July 23, 2015 , include the following:

[ x ] Civil money penalty of $ 150.00 , effective June 22, 2015 (§488.430).

We are also recommending to the CMS Regional Office and/or the State Medicaid Agency that your provider agreement be terminated on if substantial compliance is not achieved by that time.

**Denial of Payment for New Admissions (DPNA)**

Based on deficiencies cited during this survey and as authorized by CMS San Francisco Regional Office, we are giving formal notice of imposition of statutory DPNA effective September 22, 2015. This remedy will be effectuated on the stated date unless you demonstrate substantial compliance with an acceptable POC and subsequent revisit. This notice in no way limits the prerogative of CMS to impose discretionary DPNA at any appropriate time.

CMS Regional Office will notify your intermediary and the Medicaid Agency. If effectuated, denial of payment will continue until your facility achieves substantial Compliance or your provider agreement is terminated. Facilities are prohibited from billing those Medicare/Medicaid residents or their responsible parties during the denial period for services normally billed to Medicare or Medicaid.

**Appeal Rights**

If you disagree with the **determination of noncompliance (and/or substandard quality of care, if applicable)**, you or your legal representative may request a hearing before an administrative law judge of the Department of Health and Human Services, Departmental Appeals Board. Procedures governing this process are set out in 42 CFR §498.40, et. seq. You may appeal the finding of noncompliance that led to an enforcement action, but not the enforcement action or remedy itself. A written request for hearing must be filed no later than 60 days from the date of receipt of this letter.

Such written request should be made **directly** to:

***Attention: Ms. Karen Robinson***
***Departmental Appeals Board***
***Civil Remedies Division***
***Cohen Building, Room G-644***
***330 Independence Avenue S.W.***
***Washington, D.C. 20201***

A request for hearing should identify specific issues, and the findings of fact and conclusions of law with which you disagree. It should also specify the basis for contending that the findings and conclusions are incorrect. You may be represented at a hearing by counsel at your own expense.

Be sure to include a copy of this letter with your request to the Departmental Appeals Board. In addition, please forward a copy of your request to:

***Attention: Paula Perse, Manager***
***Long Term Care Branch***
***Division of Survey and Certification***
***Centers for Medicare & Medicaid Services***
***90 7th Street, Suite 5-300 (5W)***
***San Francisco, CA 94103-6707***

**Alternatively, you can file your appeal electronically at the Departmental Appeals Board Electronic Filing System Web site (DAB E-File) at https://dab.efile.hhs.gov.**

To file a new appeal using DAB E-File, you first need to register a new account by: (1) clicking **Register** on the DAB E-File home page; (2) entering the information requested on the "Register New Account" form; and (3) clicking **Register Account** at the bottom of the form. If you have more than one representative, each representative must register separately to use DAB E-File on your behalf.

The e-mail address and password provided during registration must be entered on the login screen at https://dab.efile.hhs.gov/user_sessions/new to access DAB E-File. A registered user's access to DAB E-File is restricted to the appeals for which he or she is a party or authorized representative. Once registered, you may file your appeal by:

-Clicking the **File New Appeal** link on the Manage Existing Appeals screen, then clicking Civil Remedies Division on the File New Appeal screen.
And,
-Entering and uploading the requested information and documents on the "File New Appeal-Civil Remedies Division" form.

At minimum, the Civil Remedies Division (CRD) requires a party to file a signed request for hearing and the underlying notice letter from CMS that sets forth the action taken and the party's appeal rights. All documents must be submitted in Portable Document Format ("PDF"). Any document, including a request for hearing, will be deemed to have been filed on a given day, if it is uploaded to DAB E-File on or before 11:59 p.m. ET of that day. A party that files a request for hearing via DAB E-File will be deemed to have consented to accept electronic service of appeal-related documents that CMS files, or CRD issues on behalf of the Administrative Law Judge, via DAB E-File. Correspondingly, CMS will also be deemed to have consented to electronic service. More detailed instructions on DAB E-File for CRD cases can be found by clicking the CRD E-File Procedures link on the File New Appeal Screen for CRD appeals.

If you choose to file your appeal electronically, please also send a copy of the hearing request to:

**Attention: Paula Perse, Manager**
**Long Term Care Branch**
**Division of survey and Certification**
**Centers for Medicare & Medicaid Services**
**90 7th Street, Suite 5-300 (5W)**
**San Francisco, CA 94103-6707**

**Allegation of Compliance**

If you believe these deficiencies have been corrected, you may submit your POC as your allegation of compliance to Eric Stone, Program Manager, California Department of Public Health, Licensing and Certification Program, Los Angeles Acute and Ancillary Unit - South, 3400 Aerojet Suite 323 El Monte, CA 91731. We may accept your POC as your allegation of compliance and presume compliance until substantiated by a revisit or other means. In such a case, neither the CMS Regional Office nor the State Medicaid Agency will impose the previously recommended remedy(ies) at that time.

If, upon a subsequent revisit or by other means it is determined your facility has not achieved substantial compliance, we will recommend the remedies previously mentioned in this letter be imposed by the CMS Regional Office beginning on June 22, 2105 and continue until substantial compliance is achieved. Additionally, the CMS Regional Office may impose a revised remedy(ies), based upon changes in the seriousness of the noncompliance at the time of the revisit, if appropriate.

**Informal Dispute Resolution**

In accordance with §488.331, you have one (1) opportunity to question cited deficiencies through an informal dispute resolution process. To be given such an opportunity, you are required to send your written request, along with the specific deficiencies being disputed, and relevant information (evidence) as to why you are disputing those deficiencies to Suzette Leverett - Clark, RN Assistant Chief, California Department of Public Health, Licensing and Certification Division at 12440 East Imperial Highway Room 522, Norwalk, CA 90650.

This request must be sent during the same ten (10) days you have for submitting a POC for the cited deficiencies. An informal dispute resolution for the cited deficiencies will not delay the imposition of the recommended enforcement actions. A change in the seriousness of the noncompliance may result in a change in the remedy selected. When this occurs, you will be advised of any change in remedy.

**Should CMS determine that termination or any other remedy is warranted, they will provide you with a separate formal notification of that determination.**

If you have questions concerning the instructions contained in this letter, please contact, Eric Stone, Program Manager, at (626) 312-1142.

Sincerely,

Nwamaka Oranusi, Acting Chief
Health Facilities Inspection Division

Rosario Burgos RN, Sr. HFEW for

1. During the initial tour of the unit with Registered Nurse (RN) 1 on June 19, 2015 at 8:30 a.m., Resident 1 was observed lying in bed with a PEG (Percutaneous endoscopic gastrostomy) tube (a tube passed into a patient's stomach through the abdominal wall, most commonly to provide a means of feeding when oral intake is not adequate) and tracheostomy tube (a tube to be inserted allows a person to breathe without the use of his or her nose or mouth). Resident 1 was observed with soft wrist restraints applied on his wrists. According to RN 1, the resident was confused and was on soft wrist restraints to prevent the resident from pulling out the tracheostomy tube and PEG tube.

A review of clinical record indicated Resident 1 was admitted to the facility on April 20, 2015, with diagnosis of intracranial hemorrhage (bleeding within the skull).

A review of the "Non-Behavioral restraint orders and flow sheet" dated April 20, 2015, indicated the physician had ordered bilateral soft wrist restraints to prevent the resident from pulling out tracheostomy tube and PEG tube. The order was countersigned by the physician. However, there was no documentation the physician had authenticated the order within 24 hours after the initiation of restraint for the following days: 5/29/15, 5/30/15, 6/3/15, 6/5/15, and 6/7/15 to 6/16/15. The less restrictive measures were attempted on 5/29/15 and 6/1/15.

2. During the initial tour of the unit with RN 1 on June 19, 2015 at 8:49 a.m., Resident 7 was observed lying in bed with a PEG tube and

administer the routine medications. After RN 1 administered all the oral (through the mouth) medications, she put on a pair of gloves, emptied the resident's urinal in the toilet, and without removing her gloves to wash her hands, she moved the overbed table to the side and uncovered the resident by pulling the linen sheet in order to administer Vancomycin (an antibiotic) enema (a procedure of introducing liquids into the rectum and colon via the anus through a tube).

During a concurrent interview, RN 1 stated she should have washed her hands after she emptied the urinal and before she touched the resident's environment.

A review of Resident 5's clinical record indicated the resident was admitted to the facility on February 28, 2014 with diagnoses which included methicillin-resistant staphylococcus aureus (MRSA, a bacteria responsible for several difficult-to-treat infections in humans) of the nares (nose) and Clostridium difficile (C. diff). The MDS assessment was still in the process of being completed.

A review of the physician's order, dated March 4, 2014, indicated the antibiotic was changed to Vancomycin enema 500 milligrams (mg) twice a day for seven (7) days and to place the resident on contact isolation for C. diff in the stool.

According to the facility's policy and procedure titled "Isolation Guidelines," dated November 2012, transmission-based precaution, such as contact plus precautions, was to be used in conjunction with Standard Precautions which are measures to be used in all patients regardless of diagnosis when there is potential for contact with

| K 051 | NFPA 101 LIFE SAFETY CODE STANDARD<br><br>A fire alarm system with approved components, devices or equipment is installed according to NFPA 72, National Fire Alarm Code, to provide effective warning of fire in any part of the building. Activation of the complete fire alarm system is by manual fire alarm initiation, automatic detection or extinguishing system operation. Pull stations in patient sleeping areas may be omitted provided that manual pull stations are within 200 feet of nurse's stations. Pull stations are located in the path of egress. Electronic or written records of tests are available. A reliable second source of power is provided. Fire alarm systems are maintained in accordance with NFPA 72 and records of maintenance are kept readily available. There is remote annunciation of the fire alarm system to an approved central station. 19.3.4,9.6 | K 051 | | |

LABORATORY DIRECTOR'S OR PROVIDER/SUPPLIER REPRESENTATIVE'S SIGNATURE — TITLE: INTERIM CEO — (X6) DATE: 5/29/15

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

| K 067 | Continued From page 10<br><br>During an interview, after reviewing the fire alarm system inspection and test report dated 4/24/13, the Lead Man stated that he he didn't see any evidence in the report that air handlers 1 and 2 at the 7th floor penthouse were inspected and tested.<br><br>The last documented evidence of duct smoke detectors for air handler one and two being inspected was on 3/20/12.<br><br>3. On 2/5/15 between 10 a.m. and 12 a.m., the Lead Man stated that the tower building had plenums as part of the buildings air distribution system on some of the tower building floors , but that he would have to investigate to determine which floors had plenums.<br><br>A review of the tower building's supply and exhaust conveyance document indicated that Tower floors 2, 4, 5, and 6 (T-2, T-4, T-5, and T-6) had plenums as part of the buildings air distribution system.<br><br>On 2/17/15, between 2 p.m. and 4 p.m., the following condition existed in the Tower.<br><br>At T-6, a Med-Detox unit, the air duct in the corridor was an open system with air blowing into the pen egress corridor space above the drop down suspended ceiling. There were no ducts branching out from the corridor air duct, and there were transfer openings in the egress corridor walls that separated patient rooms from the corridor. There were no ducts from the corridor duct to the patient rooms, and the egress corridor above the ceiling space was used as a portion of the supply air system serving the patient rooms. | K 067 | | |

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

| □A 297□ | Continued From page 5<br>This STANDARD is not met as evidenced by:<br>Hollywood, Culver City and Van Nuys Campuses<br><br>In an interview on 8/21/14 beginning at 9 a.m., with Staff A (Hospital Administrator), Staff L (Director .of Food Service), RD (Registered Dietitian) 1, 2, 3 and Staff W (Director, Quality) and concurrent review of performance indicators beginning January 2014 revealed the following improvement activities:<br><br>1. At the Hollywood campus, performance improvement activities were limited to data collected through patient satisfaction surveys that included the timeliness of meals served, food temperatures and overall rating of food. With respect to clinical nutrition, care data collection included the timeliness of Registered Dietitian (RD) assessment and accuracy of diet It was noted that for 2014 the hospital's goal was met for all elements; however, the follow up action was to continue to monitor, despite the lack of identification of opportunities for improvement No new activities were identified for improvement for the current year.<br><br>RD 1 acknowledged that with the majority of these indicators the department was meeting or exceeding the departmental set thresholds. She also stated that within the last several years the department had not identified new issues that □ may warrant a performance improvement study. It was also noted, there was no evaluation of the effectiveness of food handling systems within the department<br><br>There have been deficient practices in the areas of food service operation and clinical nutrition services identified by the survey team at the initial | □A 297□ | and to it Quality Council on a monthly basis. Further, monitoring activity outcomes data will be reported up to the hospital□s MEC and Governing Board on a quarterly basis. Should variance from standard practice be identified, the hospital will take immediate action to improve performance, measure the success of the improvements, and monitor performance to ensure that the improvements are sustained. (**Attachment 1)**<br>**Person (s) Responsible:** Director of Quality; Director of Dietary Services; Director of Infection Prevention.<br><br>**Culver City**<br>**2.) Corrective Actions:** The hospital has enhanced its QAPI program to ensure that it evaluates the full scope of Dietary services to ensure that **corrective action** is implemented when variance is detected and to ensure that an evaluation of the effectiveness of those **corrective action** interventions is performed. The hospital has implemented a quality appraisal that is designed to evaluate the full scope of services, detect variance and identify on-going opportunities for improvement. The quality appraisal is inclusive of on-going monitoring activity which consists of the reporting of outcomes to the hospital□s Regulatory Compliance Committee and to its Quality Council on a monthly basis. Monitoring activity consists of the following quality appraisals: (1) Correct consistency of pureed foods (pudding-like), (2) Food items evaluated for correct temperatures, (3) Food items evaluated for palatability, (4) Stock dishware/flatware used to serve patient meals, (5) Menu recipes followed verbatim, (6) Food items have a documented recipe, (7) Food recipes provide guidance on expected consistency of finished product, (8) Perishable food items dated w/opening and expiration dates, (9) Refrigerator storage space adequate (containers stored to allow ample air circulation), (10) Freezer storage temperature w/range (0F or less), (11) Refrigerator storage temperature w/range (32F □ 41F), (12) Dry storage temperature w/range (50F □ 70F), (13) Menus have variety, (14) Planned menus available for specia diets, (15) Menus meet the needs of the patients, (16) Recipe substitutions are evaluated for nutritional adequacy, (17) Food items are of proper portion sizes, (18) Enteral feeding administered per order, (19) Closed system used for Enteral feedings, (20) Feeding tubes are dated/timed, (21) Feeding tube □hang time□ w/policy, (22) Feeding tube records evidence actual volume delivered, (23) Diet orders administered per therapeutic spreadsheet, (24) Patients receive correct diet order, (25) Unclear diet orders are clarified, (26) Sanitation practices followed (gloves changed between tasks and hand hygiene), (27) Air gaps installed on sinks, (28) Proper protection used when disposing garbage, (29) Dry wiping cloths used to dry food production equipment. The hospital will continue to review its QAPI program for opportunities to further enhance it to target opportunities for improvement and mitigation of identified issues.<br>**Date of Implementation**: October 24, 2014<br>**Monitoring Process:** Monitoring activity outcomes data is submitted to the hospital□s Regulatory Compliance Committee and to it Quality Council on a monthly basis. Further, monitoring activity outcomes data will be reported up to the hospital□s MEC and Governing Board on a quarterly basis. | 10/24/2014 |

| A 630 | 482.28(b)(2) DIETS<br><br>Nutritional needs must be met in accordance with recognized dietary practices and in accordance with orders of the practitioner or practitioners responsible for the care of the patients.<br><br>This STANDARD is not met as evidenced by:<br>Based on observation, review of hospital documents and staff interviews, the hospital failed to ensure the nutritional needs of patients on pureed and diabetic diets (Patient 57, 58, 59, and 60) and two sample patients on tube feeding (Patient 55 and 56), in sample of eight, were in accordance with recognized practices and orders of the practitioner responsible for the care of patients. Tube feeding orders were not carried out correctly; recommended hang times for tube feeding orders were not followed, which could result in growth of microorganisms. The pureed diet was improperly prepared resulting in a watery consistency that could result in aspiration; improper preparation method also compromised the nutritive value of the food. Diabetic diets incorrectly translated to meet the caloric limits set by the physician in the diet order and unclear diet order was served without clarification with the physicians. This could result in patients receiving diets not in line with the therapy planned by the physician.<br><br>Findings: | A630 | | |

| □A 630□ | Continued From page 25<br>Hollywood Campus<br>1. On 8/18/14 beginning at 6 p.m., Patient 55□s tube feeding was running at a rate of 40 cubic centimeters (cc- a metric unit of measure). Patient 55□s feeding was an open system feeding. An open system allows of addition of formula throughout the course of the day; whereas a closed system does not allow for the addition of formula (Critical Care Nutrition, 2011). It was also noted that the feeding was dated as 8/18/14; however the time the feeding was hung was not documented. It was also noted that 200 cc of formula remained in the feeding bag.<br><br>In a concurrent interview and demonstration with RN 2 (Registered Nurse), she stated that she started the feeding at approximately 6 a.m., on 8/18/14. She also stated that she added 2 cans or the physician ordered supplement when the feeding was started. She further stated that when the feeding became depleted she would add additional cans of formula. In a concurrent observation of the enteral pump, the pump recorded of 112 cc□s of feeding delivered. RN 2 was unable to demonstrate the amount of feeding that was delivered since it was hung on 8/18/14 at 6 a.m.<br><br>Review of patient intake/output records dated 8/18/14 noted that nursing staff documented that 40 cc□s of formula was delivered every hour. It was also noted that based on hospital documentation a total of 480 cc□s of formula was delivered. There was an inconsistency of 368 cc□s between the cumulative total of the enteral pump and the documentation in the electronic medical record. RN 33 was unable to describe the inconsistency. She also stated that she documented the physician□s order in the medical | □A 630□ | **Hollywood**<br><br>**1.) Corrective Actions**: All open-system tube feedings have been discontinued and switched to closed system feeding; education/in-service with return demonstration provided to staff to included: 1) new closed-system feeding, 2) tube feeding orders, 3) date and hang time of feeding, 4).water flushing and 5). Proper documentation in EMR to include accurate documentation of Intake and Output. Education inservice with return demonstration was provided to staff on August 23-Sept 17, 2014. (**Attachment 1**)<br>**Date of Implementation:** Education for tube feeding occurred August 23, 2014- September 17, 2014; closed system implemented facility wide on September 16, 2014; RD education on diet list, entering diet orders, MD orders September 17- 29, 2014<br>**Monitoring process:** Nursing performs audits on tube feedings<br>**Person Responsible:** Nursing department | 8/23/2014<br>9/16/2014<br>9/17/2014 |

| □A 701□ | Continued From page 55<br>Radioactive Laboratory, (Nuclear Medicine □1) the examination table had two missing nylon fasteners replaced with metal bolts and nuts, with the end of the bolts facing up to where the patient would lie on the table. The end of one of the bolt had a sharp edge, and the nut was loose.<br><br>80. Hollywood Campus<br>Emergency Preparedness<br>During observation on 8/18/14 beginning at 10:45 a.m., the hospital's disaster preparedness was reviewed in the presence of Staff L (Director of Food Service). In a concurrent interview, she stated that the hospital was planning for a total of 200 patients and staff for a period of 4 days. She also stated the plan was to utilize dehydrated meal products. Review of the inventory revealed that currently the hospital had 125 meals on hand for approximately two days; however had planned to augment that supply with additionally stocked dry goods such as canned tuna. Review of current stock revealed there were 9 cans each weighing 5 pounds which would equate to 200 servings, a quantity for 1 meal. It is unclear how the hospital would implement the plan when there was no menu, staff guidance, recipes or evaluation of inventory to ensure the development of a comprehensive feeding plan that would meet the nutritional needs and could be implemented in the event of a disaster. In addition, additional review of 8/18/14 at 2:45p.m. of available fluid revealed that the hospital had insufficient quantities of dry milk. The plan as discussed would be inadequate to meet the hospital needs for four days.<br><br>It was also noted that the dehydrated meal | □A 701□ | **Hollywood**<br>**80).Corrective Action**s: A plan was enacted to have on hand a minimum of 4 days of water & 7 days of foods and related supplies on hand based on population of 200. | A 726 | Continued From page 66<br>Although there was an air vent in the room, there was a refrigerator/freezer in the room that generated heat possibly contributing to the high room temperature. In an interview with Staff K, she stated that they do not monitor or keep logs of the dry storage room.<br><br>According to the same policy described above, "All dry goods are stored in storeroom that is clean, dry and well ventilated ... " The dry storage room was not well-ventilated. Improperly stored staple foods could result in poor quality such as deterioration of food products including rancidity and altered flavors. Foods held at less than optimum temperatures could support the growth<br>of microorganisms that promote spoilage and /or food borne illness.<br><br>Best practices guidelines would ensure dry food staples such as flour, crackers, cake mixes, seasonings, and canned goods should be stored in their original packages at an optimal range 50°F to 70□F. Higher temperatures speed up deterioration (Virginia, Clemson State and Ohio State Universities Cooperative Extension). While the hospital's policy titled, "Food Supply and Storage Procedures" dated 11/12 noted that dry storage areas may be maintained at<br>temperatures ranging from 50-75□F, there were no standard of practice references to support the elevated temperature range. Departmental policy titled, "Surveillance, Prevention, and Control of Infection" dated 11/12 noted that "Adequate ventilation shall be provided in all storage areas ...Lighting, ventilation, and humidity shall be controlled to prevent the growth of microorganisms." | A 726 | | |

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

The deficient practice had the potential for compromising patients' nutritional status.<br><br>Findings:<br><br>Hollywood campus<br>1. During meal service at approximately 12:15 p.m. on March 24, 2014, a tray for a patient on pureed diet was observed placed on the cart for. distribution to the floor. The plate of the unsampled patient contained three small plastic souffle cups. In each cup was pureed meat, pureed vegetable and mashed potatoes. The amounts served appeared smaller than would be expected for an adult. Measurement of the food revealed the meat and vegetables were each 2 oz. The mashed potato was 2/5 c or 3.2 ounces. The correct portion for purred meat should have been 3 ounces, 4 ounces for the vegetables and mashed potatoes based on the serving size of the patients on the regular diets.<br><br>The consistency of the meat and vegetables in each of the cups was that of soup or liquefied pureed. The correct consistency of pureed food is that of mashed potatoes. Incorrect consistency could result in aspiration of food into the lungs resulting in aspiration pneumonia. Aspiration pneumonia is an inflammation of the lungs or bronchial tubes resulting from food, saliva, liquids or vomit breathed into the lungs. | A 630 | **Hollywood & Van Nuys**<br>**1.) Pureed food :**<br>**Corrective Actions:** Food service staff was educated on proper preparation of pureed food using food thickener and portioning of pureed food items. Dietary staff was in-serviced on appropriate portion sizes, correct consistency, menu reading and following therapeutic diet requirements. Menu books were provided to the dietary staff for reference to ensure accurate patient tray preparation. In addition a simplified □snap shot□of items to be used in the prep area was created and posted. Additional changes to these processes will be implemented and staff trained based on audit results.<br>**Date of Implementation:** May 19, 2014 and April 30, 2014 to June 5, 2015. Initial Competency will be completed 7/31/14.<br>**Monitoring Process:** Biannual return Demonstration/Comprehension competencies will be conducted on all food service staff at Hollywood and maintained in employee files. Tray audits will be performed 3-5 times per week to ensure diet tray accuracy and compliance with prescribed menu. Results of audit activity will be reported to the hospital□s Quality Council, MEC, and Governing Board on a quarterly basis.<br>**Person Responsible:** RD, Director of Dietary Department | 5/19/2014<br>7/31/2014 |

| A 630 | Continued From page 103<br><br>Culver City campus<br>2. Patient 12 was admitted with diagnosis including pneumonia (an infection in the lungs) and hypoxia (a low level of oxygen in tissues and blood). Electronic medical record review was conducted on March 26, 2014 beginning at 2 p.m. Admission diet order dated March 13, 2014 was a cardiac diet. A physicians' order dated March 24, 2014 was for tube feeding through a nasogastric tube (tube through the nose inserted in the stomach for feeding) with Diabetasource (tube feeding formula for diabetics) at a rate of 20 cc (cubic centiliters)/hour. A follow up order dated March 26, 2014 requested water via the NG tube, 150 cc (a metric unit of measure) every 6 hours. The tube feeding was ordered on March 24, 2014 at 3 p.m.<br><br>An observation of the tube feeding was conducted on March 26, 2014 at 3:00 p.m. It was noted that the tube feeding pump was off. It was also noted that the feeding bag or the tubing was not dated and/or labeled; the volume in the bag at the time of hanging was 1,000 cc and that there was approximately 300 cc left. It was also noted that a new bag of Diabetasource was lying on the residents' bedside table.<br><br>In a concurrent interview with Staff 3, she stated that the dietary department sent up tube feedings every day at lunch that included labels which were intended to be placed on the tube feeding when it was hung. In an interview with RN 17, she stated that she reset the pump as 12 p.m. (3 hours prior). She also stated that she cleared the pump at 12 p.m. and turned the pump off shortly before 3 p.m. to provide personal care and probably forgot to turn it back on. | A 630 | (Continued from page 103)<br><br>**Culver City**<br>**Corrective Action:** Policy VAS.005 □Intravenous Therapy □ Initiation and Management of Peripheral Intravenous Lines□and Policy PAT.057 □Enteral Nutrition Support□were used, along with the mandatory online self-study module, to re-educate nursing staff. All feeding bags, IV bags and all tubing must be labeled, dated, timed and initialed. Documentation of tube feeding will be accurate.<br>**Date of Implementation:** 6/16/2014<br>**Monitoring Process:** Nursing Leadership from each department will monitor proper labeling of IV bags, feeding bags and all tubing using the newly created □IV Fluid P.I.□and □Feeding Formula P.I.□ audit tools. Date will be collected on 30 random patients and then results will be reported to the Quality Council on a monthly basis.<br>**Person Responsible:** Nursing Leadership in each unit. | 06/16/2014 |

| A 630 | Continued From page 105<br><br>describe how this diet was implemented. She stated that she had not yet completed the tray cards for the ensuing day; however she would use the pre-printed menu for renal diets, which limited the potassium to 2 grams/day. She also stated that if the renal diet did not meet the physicians' specific parameters she would decrease the amount of protein in each of the meals to meet the parameters. The example she described was to decrease the noon meal to 1-ounce of protein and the dinner entree selection to 3 ounces. She also stated that once the meal was delivered she would not be able to recount what was actually delivered as there was no system to know what was delivered to patients after the fact.<br><br>In a concurrent interview with Staff 4; she was asked if there was guidance for dietary staff to follow when referring specialized diets to a registered dietitian (RD) 1 for review. She replied that while there was no guidance this was one that should have been reviewed by an RD 1. Review of the hospitals diet manual on March 26, 2014 at 4 p.m., revealed that a renal diet would restrict protein, sodium and the potassium was limited to 2 grams, a more severe restriction than was ordered by the physician. Sources of potassium include meats, vegetables, and dairy (National Institute of Medicine), a 3 gram potassium diet would have included additional sources of potassium rather than restricting them. On March 28, 2014, the hospital presented a blank document titled □Diet Clerk Competency Test□ which included guidance to contact the RD for modification of complicated diet orders.<br><br>4. | A 631 | Continued From page 111<br><br>reviewed. It was noted that in the diet manual, a low fiber diet was described as less than 15 grams of fiber/day. Review of the nutritional analysis of the low-fiber menu revealed that for 3 of 7 days the fiber content exceeded the diet manuals specifications ranging from 16.4-18.7 grams of fiber/day.<br><br>Hospital failed to use the low fiber diet parameters approved by medical staff to develop the menu for patients on low fiber diets.<br><br>2. Review of the hospitals' diet manual under the section titled □Dietary Management of Diabetes Mellitus□ revealed that this section provided clinical practice recommendations; rather than the elements of a diet manual. Diet manuals establish a common language based on hospital practices. A diet manual would reflect the purpose and principles of each diet, a meal pattern based on the hospitals menu, foods allowed and not allowed and the inadequacies of each diet.<br><br>The facility's diet manual should mirror the diets ordered by physicians and the nutritional care provided by the facility. Hospital policy titled □Diet Manual□dated 11/12 guided staff that the □diet order should be specified in terms of exact amount of restriction: 1500 calorie ....□ However, when these diets were ordered with specific caloric restrictions they were changed and interpreted as consistent carbohydrate levels (CCHO). The policy also noted that if the physician □is unsure of the terminology necessary for desire diet order, he/she should consult the Clinical Diet Manual ... □It was noted that referring to the diet manual would not have provided physicians additional guidance for | A 631 | (Continued from page 111)<br>**Culver City**<br>**1) Corrective Actions:** Low Fiber diet has been revised so that nutrition analysis is consistent with the Manual of Clinical Nutrition Management, diet manual used at Culver City. Diet spread sheets have been revised. **(see Addendum 55)**<br>**Date of Implementation:** April 5, 2014<br><br>**Monitoring Process**: The Manual of Clinical Nutrition Management (diet manual) is reviewed and approved annually by the medical staff and Registered Dietitians.<br><br>**Person Responsible:** R.D. Clinical Nutrition Manager.<br><br>**2) Corrective Actions:** The Medical Nutrition Therapy for Diabetes Mellitus addendum to the Manual of Clinical Nutrition Management (Diet Manual) has been modified to reflect the missing components. Policies, Diet Manual and Electronic Medical Record System will be in sync with the requirement of computerized physician ordering in July 2014.<br>The Diet Manual policy referred to is for Hollywood/Van Nuys. Culver City does not require that □diet orders should be specified in terms of exact amount of restriction□pertaining to 1500 calorie diets **(see Addendum 56)**<br><br>**Date of Implementation:** 6/1/14<br><br>**Monitoring Process:** Monitoring of the accuracy of Diet orders in CPOE will be implemented in 8/2014 following implementation.<br><br>**Person Responsible:** R.D. Daily rounding is conducted by EVS to monitor cleanliness.<br>**Person Responsible:** Director of EVS and Director of Engineering<br>**72). Corrective Actions:** The standard faucet in the patient bathroom was replaced with anti-ligature faucet. The exposed drain pipe will be covered with a p trap cover.<br>**Date of Implementation:** The standard faucet in the patient bathroom was replaced with anti-ligature faucet on August 19, 2014. The exposed drain pipe will be covered with a p trap cover by September 19, 2014.<br>**Monitoring Process**: Until patient bathrooms are resistant to ligature, continual round the clock rounding by mental health workers will be conducted at 30-minute intervals to ensure patient safety. Criteria to monitor that integrity of anti-ligature faucets and p-trap covers are in place will be added to the Behavioral Safety Rounds sheets, and will be surveyed on a weekly basis.<br>**Person Responsible:** Director of Engineering, Director of Behavioral Health<br>**73). Corrective Actions:** The standard faucet in the patient bathroom was replaced with anti-ligature faucet. Source of insects, e.g. food tray, was removed from the room by Nursing staff. Steritech, pest control, came on April 7 and 11, 2014 and got rid of small flying insects in room 615. The pest control company also did visual inspection of the entire unit.<br>**Date of Implementation:** The standard faucet in the patient bathroom was replaced with anti-ligature faucet on August 19, 2014. Steritech completed work on April 11, 2014 (pest control).<br>**Monitoring Process:** Until patient bathrooms are resistant to ligature, continual round the clock rounding by mental health workers will be conducted at 30-minute intervals to ensure patient safety. Criteria to monitor that integrity of anti-ligature faucets and p-trap covers are in place will be added to the Behavioral Safety Rounds sheets, and will be surveyed on a weekly basis. Food trays are brought by staff inside the rooms of Geropsych patients and any patient who is unable to get out of bed. Leftover food is removed by staff immediately after meal time. All the other patients are allowed to dine only in the activity/dining room. Pest control provider comes monthly for routine service at high-risk areas for insects/pests and is on call to areas requiring their service.<br>**Person Responsible:** Director of EVS and Director of Engineering | 3/26/2014<br>9/19/2014<br><br>4/10/2014<br><br>4/11/2014<br>6/30/2014<br><br>8/19/2014<br>9/19/2014<br><br>4/7/2014<br>8/19/2014 |

| A 701 | Continued From page 141<br><br>with Staff 2. She stated that the hospital was preparing to serve 160 patients and staff for a period of 5-7 days. Concurrent review of the hospital document titled □Disaster Plan□ dated 11/12 revealed that the menu was limited to 3 days, despite the hospitals' intent to be self-sufficient for 5-7 days. It was also noted that the food supply was inadequate, with insufficient quantity for some items for 1 meal. As an example the plan called for a tuna sandwich for 2 required 360 servings. It was also noted that the plan was to serve milk; however the hospital did not have any powdered milk and the current milk on hand would also be less than a 1-day supply. Similarly there were either inadequate or non-existent supplies of ravioli, soup, chicken or chili. Staff 1 acknowledged that the supply was not adequate.<br><br>It was also noted that the menu/food supply consisted of items such as hot cereal, soups, and Sloppy Joes that required cooking. In an interview with the Facilities Director on March 27, 2014 at 10:30 a.m., he stated that he had a large barbeque in the basement that could be utilized. While the hospital had a barbeque, the fuel supply was limited to two 5-gallon tanks of propane. He stated he did not know how long these tanks would last and acknowledged that the use of the barbeque would not likely be practical in a mass disaster due to the unavailability of fuel.<br><br>133. During an initial kitchen tour on March 27, 2014 beginning at 8:20a.m., it was noted that the water at the employee hand washing sink was tepid. On March 27, 2014 at 9 a.m., Staff 2 was asked to take the water temperature. It was noted to be 70□F. It would be the standard of practice to ensure that the water temperature of | A 701 | (Continued from page 141)<br>**Date of Implementation:** July 31, 2014 Written plan completion, staff training and monthly inventory of disaster supplies will be completed by September 10, 2014 Weekly inventory of all food products to ensure adequate availability will take place starting September 10, 2014<br>**Monitoring Process:** Weekly inventory to ensure adequate menu supplies are on hand and no non pasteurized eggs are present. | A 703 | Continued From page 145<br>During an interview at the same time as the review, Staff 5 stated that the disaster coordinator not available and that the Loss of Water Policy and Procedure (Number EMP.018) is scheduled to go through committee in April.<br>3. On March 27, 2014 beginning at 10:30 a.m., an evaluation of the hospital disaster water storage was reviewed with the Facility Director (FD), Staff 6. It was noted that the hospital plan was to provide .5 gallons/person/day of potable water with an additional .5 gallons for non-potable water. It was also noted that in the basement the hospital was storing 240 gallons of bottled water. Staff 6 also stated that additional water would be obtained from the facility water heaters.<br>Concurrent observation of the water heaters revealed that there was a discharge valve at the bottom of the water heater that was approximately 3 inches off the ground. Staff 6 director stated that he would use a garden hose to get the water out of the tank. He also stated the hospital did not have a hose specifically intended for the use of transferring potable water.<br><br>Review on March 28, 2014 at 1 p.m., of an undated draft policy presented by the hospital titled 11 Loss of Water Policy and Procedure revealed that the hospital planned on using the boiler room water as a non-potable source of water, rather than a potable source which would limit the potable source to 240 gallons. It was also noted that the plan did not include any potable water required to implement the disaster menu or direct patient care needs.<br><br>Additional review of the plan revealed that the hospital utilized a reference document developed by the Centers of Disease Control and the American Water Works Association (2012) that | A 703 | | |

In OR □2, the surgical instruments and sterilized gowns on the back table were opened to the air at 9:38 a.m. Scrub technician (ST) 1 Was about to go out of the room to scrub his Hands without constantly monitoring the sterile field until the surveyor intervened. During the concurrent interview, ST 1 stated he had to prepare the surgical instruments to be ready for surgical procedures. The patient was brought into the room at 10:15 a.m., which was 37 minutes after the surgical instruments were opened on the back table.<br><br>According to Perioperative Standards and Recommended Practices for 2013 of the AORN Recommendation VII<br>Sterile fields should be constantly monitored.<br>VII.a. Once created, a sterile field should not be left unattended until the operative or other invasive procedure is completed.<br><br>2. There was no thermometer and humidity | A 951 | (Continued from page 180)<br>**2) Corrective Actions**: Red Line Air Conditioning Service to assess decontamination area for proper exhaust. A temperature and Humidity gauge will be installed in the Decontamination Room in Central Processing. Room temperature and humidity will be monitored and recorded on a daily basis by Plant Operations and Central Processing Staff **(see Addendum 156, 156a).** Corrective actions will be taken and documented when minimum parameters are not met. . ASHE, AORN, and AAMI, guideline parameters for Soiled/ decontaminated areas are temperature 60-65 degrees and 20-60% humidity. Digital gauges will replace the Analog gauges in those areas where the monitoring of temperature and humidity is required on June 18, 2014.<br><br>**Date of Implementation**: June 17, 2014 Red Line Air Conditioning to assess decontamination area for proper exhaust. June 18, 2014 installation of digital gauges in areas requiring monitoring of temperature and humidity. June 18, 2014 Daily Monitoring of Temperature and Humidity in Central Processing<br><br>**Monitoring Process:** Monitoring activity will include a verification of the Decontamination Room daily temperature and humidity log by the Director of Perioperative Services. Compliance data will be reported to the Infection Prevention Committee and the Quality Council on a quarterly basis until optimal compliance is achieved.<br><br>**Person(s) Responsible:** Director Perioperative Services & Director Plant Operations | 6/17/2014 |

|---|---|---|---|---|
| A 951 | Continued From page 182<br>temperature to ensure that the correct temperature is being achieved.<br><br>Rationale: Work areas should be comfortable for properly attired personnel. Comfort is a particular consideration in the decontamination area, where PPE is worn for long periods of time and where temperatures suitable for general work areas might be uncomfortably hot. Also, bacteria thrive at high temperatures; cool temperatures in the Decontamination area might help minimize Bioburden. Although AIA (2006) allows the temperature in clean work areas to be as high as 24° C (75° F), the consensus of the AAMI Committee was to recommend consistent temperature ranges for all general work areas. Controlling the temperature in sterilization equipment access rooms promotes higher efficiency of the equipment contained within the enclosures. For additional information on temperature control, see AIA (2006).<br>3.3.6.6 Relative humidity<br>Relative humidity should be controlled between 30% and 60% in all work areas except the sterile storage area, where the relative humidity should not exceed 70%. An independent humidity monitor should be located in each area that requires controlled relative humidity. Relative humidity should be recorded daily. Processing personnel in each work area are responsible for monitoring and recording the relative humidity to ensure that the correct relative humidity is being achieved.<br><br>NOTE-Ideal relative humidity in the preparation And packaging area is 50% and should not be less than 35% for best results in achieving sterilization. In the decontamination area, the recommended range of relative humidity should | A 951 | | |

|---|---|---|---|---|
| A 951 | Continued From page 183<br>be maintained to the extent possible, but temporary elevations might occur because of the type and quantity of cleaning and decontamination equipment.<br><br>Humidifiers may be installed to maintain the recommended humidity level seasonally (e.g., during the winter months, when the heating system is functioning). If duct humidifiers are located upstream of the final filters, they should be placed at least 15 feet (4.57 meters) upstream of the final filters. For ductwork with duct mounted humidifiers, there should be a means of water removal. An adjustable high-limit humidistat should be locteddownstream of the humidifier to reduce the potential for condensation inside the duct. All duct takeoffs should be sufficiently downstream of the humidifier to ensure complete moisture absorption. Steam humidifiers should be used. Reservoir-type water spray or evaporative pan humidifiers should not be used.<br><br>Rationale: Relative humidities higher than those recommended can promote microbial growth and thus increase bioburden. Relative humidity lower than 30% will permit absorbent materials to become excessively dry, which can adversely affect certain sterilization parameters (such as steam penetration) and the performance of some products (such as BIs and CIs). Thus, for best results, the committee recommends an ideal relative humidity level of 50% and a minimum level of 35%. The recommended range for relative humidity was largely based on AIA (2006). | A 951 | | |

Administrator
Nix Health Care System
414 Navarro, Suite 600
San Antonio, TX 78205

Dear Administrator:

Enclosed is the CMS-2567 Statement of Deficiencies and Plan of Correction Forms for federal deficiencies and the State forms for State deficiencies cited during a Health Survey conducted at your facility on October 29, 2015. Please type your plans of correction and proposed completion dates on the enclosed forms. Your signature is required on page one of each set of deficiencies. The enclosed forms need to be returned to this office within ten days from the date of receipt. Please keep a copy of the forms for your files.

On the enclosed list of deficiencies, please follow these instructions:

1. Enter on the form provided a plan of correction for each deficiency cited; please assure that each plan of correction clearly indicates the corrective action to be taken; rebuttals to or explanations for the deifciencies cannot be construed as acceptable plans of correction; proper names cannot be used. Please include the mechanism for monitoring to assure compliance.
2. The plan should address improving the processes that led to the deficiency cited.
3. The plan must include the procedure for implementing the acceptable plan of correction for each deficiency cited.
4. A completion date of correction for each deifciency cited must be included.
5. The monitoring procedure to ensure that the plan of correction is effective and that the specific deficiency cited remains corrected and/or in compliance with regulatory requirements.

6. The plan must include the title of the person responsible for implementing the acceptable plan of correction. DO NOT use proper names.
7. Enter a date of completion for each deifciency.
5. Return the completed plans of correction to this office by email, fax or mail.

Please note acceptance of a plan of correction to any alleged noncompliance does not preclude a proposal to assess administrative penalties and/or to otherwise take disciplinary action for that or any alleged noncompliance.

Should you have any questions, please call me at 210-531-4532. Thank you for your cooperation.

Sincerely,

Mr. Larrie Collier, Program Administrator
Health Facility Compliance Division

Note: The CMS-2567 (Statement of Deficiencies) , is an official, legal document. All information must remain unchanged except for entering the plan of correction, correction dates, and the signature space. Any discrepancy in the original deficiency citation (s) will be reported to the Dallas Regional Office (RO) for referral to the Office of the Inspector General (01G) for possible fraud. If information is inadvertently changed by the provider/supplier, the State Survey Agency (SA) should be notified immediately.

An unannounced full survey was conducted on site. An entrance conference was held with the hospital delegated-representatives the morning of ! 10/26/15. The hospital delegated-representatives were informed this survey would be conducted according to the survey protocol in the State Operations Manual, Chapter 5, section 5100 and Appendix A, and according to 42 CFR 482 the Conditions of Participation for Hospitals.

Survey findings were presented at an exit conference on the afternoon of 10/29/15 with hospital delegated-representatives. The preliminary survey findings were presented and facility staff were given the opportunity to ask questions and provide additional information.

not been signed in the area for Physician's Signature to include authentication.

Patient #12

Record review on 10/28/15 of Patient #12's records revealed he was admitted to the facility on 10/22/15. Patient #12's Admission Orders, Medication Orders, and Physician Certification dated 10/22/15 at 00:45 had not been signed or authenticated by a physician as of 10/28/15 (6 days past/144 hours).

Further review of Patient #12's Physician Orders revealed the following Telephone Order (TO) that : had not been signed or authenticated by a physician as of 10/28/15:
10/22/15 at 00:45 TO for the following medications: Tylenol 325 milligrams (mg), Hydroxyzine HCL 25 mg, Loperamide 2mg, Lorazepam (Ativan)1 mg, and milk of magnesium 400 mg.

During an interview on 10/29/15 at 10:40 AM with the facility's Chief Nursing Officer (CNO) and Director of Risk Management confirmed the following Patient records (# **1,** #2 #9, and #12) had Verbal/Telephone Orders that had not been signed or authenticated. The CNO stated that Verbal/Telephone Orders had to be signed within the facility's Policy; By Laws; which was 48 hours from the time of the order. The Director of Risk Management stated that the Psychiatrist would sign their own Restraint/Seclusion Verbal/Telephone Orders when doing rounds and reviewing charts. The Director of Risk Management confirmed that Patient #9 had 6 Restraint/Seclusion Verbal/Telephone Orders that had not been signed or authenticated. The
