| K 045 | Continued From page 16<br>of means of egress as is necessary for corridors, passageways, stairways, landings, and exit doors and all ways of approach to exits. Switching arrangement to transfer patient corridor lighting from general illumination circuits shall be permitted<br>providing only one of two circuits can be selected and both circuits cannot be extinguished at the same time.<br><br>Findings:<br><br>During a facility tour with staff from 12/14/15 to 12/18/15, the stairwells were observed.<br><br>Culver City Campus:<br><br>1. The facility failed to provide documentation to show that emergency lights were inspected in the stairway enclosures of the Tower and Pavilion and connection of the lights in the stairwells to emergency power could not be verified by documentation. This finding was previously cited during a Life Safety Code Survey conducted in September 2015 under K046. During the September survey, facilities staff were unsure if the stairwells were equipped with emergency lighting.<br><br>During an interview at 3:24 p.m., on 12/15/15, the Plant Operations Lead Staff (PO1) was asked if the stairwells were equipped with emergency lights and if they would be continuously illuminated during a power outage. PO1 stated that the lights were hooked up to the generator power but there were no records of inspecting them monthly. | K 045 | 1. Hospital Leadership engaged an electrical vendor to assess the lights in the stairway enclosures of the Tower and Pavilion. The electrician confirmed that the lights are on emergency power and would be continuously illuminated during a power outage.<br><br>2. Inspection of emergency lighting in egress stairwell enclosures for all three campuses was performed and the records are maintained in the Facilities Department.<br><br>3. The Director of Facilities inserviced the department staff on emergency lights in egress stairway enclosures of the Tower and Pavilion, with special emphasis on these lights being on emergency power in the event of a power outage, how to perform the inspection and that inspections are to occur on a monthly basis, and documentation is maintained in the Facilities Department.<br><br>4. Emergency lighting in egress stairway enclosures is monitored monthly with generator testing.<br><br>Compliance and Monitoring:<br>Data on compliance is tracked, trended, analyzed and is reported monthly at the EOC Committee. Corrective action is taken as necessary. Compliance is reported monthly to the Quality Council (until the Quality Council determines monitoring of the building is sufficiently conducted and then reporting will be provided quarterly to the Quality Council) and quarterly to the Governing Board. | 02/29/2016<br><br>02/29/2016<br><br>03/11/2016 |

All dampers in the Pavilion were tested this year as part of an HVAC restoration project but there were no records of testing the Tower fire dampers since 2010. Without utilization of a categorical waiver, the dampers were due to be tested in November 2014.<br><br>3. At 11:04 a.m., on 12/15/15, records indicated that five dampers (#2-003, #2-004, #2-005, #2-006, and #2-008) in the second floor of the Tower failed testing on 11/4/10. There were no records of repairing the dampers.<br><br>Van Nuys:<br>4. At 8:07 a.m., on 12/16/15, there was a temporary portable air handler connected to the temporary portable chiller in the west parking lot. The portable chiller was cited during the last Life Safety Code Survey in September. The portable chiller, on a wheeled portable flat bed in the west parking lot, did not have an OSHPD permit.<br><br>An invoice from the HVAC vendor indicated that the temporary chiller was installed on 7/17/15.<br><br>At 11:37 a.m., a kitchen temperature log indicated that the portable air handler has been installed since 9/30/15. Records indicated that an application for an OSHPD permit was submitted but no permit had been issued for the use of the temporary chiller and air handler.<br><br>During an interview at 11:55 a.m., the Project | K 067 | 2. Hospital Leadership discussed the findings with the Director of Facilities and the process for ensuring that timely damper testing is completed and documentation maintained. The schedule for fire damper testing is listed on the PM program schedule. Documentation is to be maintained in the Facilities Department. The Damper Test for the Tower Building was conducted in October and November 2015 and the next due date is November 2019.<br><br>3. Hospital Leadership reviewed the survey findings with the Director of Facilities. The Hospital was unable to locate the documents indicating repairs of the five dampers in the second floor of the Tower from 11/4/10. The fire damper testing for the Tower Building was completed in November 2015 and repairs were completed by 3/11/16. Scheduled testing of dampers is monitored through the PM program. If issues arise, documentation indicating repairs is maintained in the Facilities Department.<br><br>4. The VP of Facility Operations discussed the survey findings regarding the application for a permit with the OSHPD Regional Compliance Officer, who confirmed that they would not issue a permit because the project was considered to be a repair. The Unit has subsequently been removed and OSHPD project No. S152648-19-00 was closed on 2/20/16. | 12/22/2015<br><br>03/11/2016<br><br>02/20/2016 |

At 3:51 p.m., on 12/14/15, the kitchen hood above the stove was not equipped with grease filters. This finding was previously cited during a Life Safety Code Survey conducted in September 2015. | K 069 | Actions Taken:<br>1. The Senior VP of Hospital Operations consulted with a repair vendor to assess the particular kitchen hood above the stove in the Pavilion Building for grease filters. The vendor inspected the kitchen and advised the Hospital in writing that this type of stove does not require a grease filter as it is self-cleaning. The Hospital also obtained the manufacturer's manual for the kitchen hood, which stated that the ventilator "extracts 95% of the grease, dust and lint particles from the air stream passing through it without the use of filters, revolving devices, removable parts or running water. This high efficiency eliminates the fire hazard and maintenance problems normally due to the accumulation of these contaminants in the ductwork." The Senior VP of Hospital Operations discussed this issue with the Director of Facilities.<br><br>2. The Hospital contacted an outside vendor to inspect and clean the kitchen hood filters above the stove in the Hollywood, First Floor area. The Hospital set up a quarterly hood inspection with the vendor beginning 1/5/16. | 12/22/2015<br><br>01/05/2016 |

| A 167 | Continued From page 10<br>member (MHW 1) was seated at a table at the foot of the bed.<br><br>When asked where the staff member was who was assigned to N 401, LN 11 stated, "Oh, he (MHW) 2 is just down the hall if they need him."<br><br>N 401 was not receiving 1:1 observation as required by the facility's policy. | A 167 | | |
| A 172 | 482.13(e)(8) PATIENT RIGHTS: RESTRAINT OR SECLUSION<br><br>[Unless superseded by State law that is more restrictive,]<br>(ii) After 24 hours, before writing a new order for the use of restraint or seclusion for the management of violent or self-destructive behavior, a physician or other licensed independent practitioner who is responsible for the care of the patient as specified under §482.12(c) of this part and authorized to order restraint or seclusion by hospital policy in accordance with State law must see and assess the patient.<br><br>This Standard is not met as evidenced by:<br>Based on observation, interview, and review of records the facility failed to ensure the physician documented an assessment of two patients in seclusion and/or restraints. Patient N 402 was on 1:1 observation and in four point restraints. Patient N 404 was in the locked seclusion room.<br><br>This failure placed both patients at risk for not being accurately assessed for the restrictions.<br><br>Findings:<br><br>Review of facility policy titled Behavioral Restraints and Seclusion" dated 3/2014 identified | A 172 | A 172 482.13(e)(8) Patient Rights: Restraint or Seclusion<br><br>Immediate Actions Taken:<br>1. Executive Leadership discussed the surveyor's comments from the exit interview regarding physician documentation of assessments of patients in seclusion and/or restraints.<br><br>Subsequent Actions Taken:<br>1. The "Restraint and Seclusion" policy was revised (and approved by the MEC and Governing Board) to discuss the requirement of the physician to assess the patient, however the discussion of documenting this in the progress notes was not made a requirement. The focus for the medical staff is on ensuring the assessment takes place with the restraint/ seclusion integrated into the care planning process where all staff can easily review. A memorandum was disseminated to the medical staff encouraging documentation in the progress notes as well, however, the focus is on performing the assessment, and getting the restraint/seclusion management effectively in the care planning document<br>2. Executive Leadership engaged two consulting physicians to work with medical staff providers (including nurse practitioners) to ensure understanding of restraint/seclusion requirements.<br>3. Compliance with ongoing assessments for patients in restraints/seclusion is monitored through the QAPI program. | 12/29/15<br><br>3/22/16<br><br>2/15/16 and 2/29/16 |

The hospital implemented a process of significant adverse events management improvements and executive awareness through daily "Flash" huddles with weekends rolled into Monday's outcome data. Any significant event on the weekend will be reported to the administrator on call. Executive Leadership participates in these meetings where any significant event occurring over the prior 24 hours is brought before senior leadership for immediate review, ensuring the event is managed timely, by the right individuals, through the right method. The hospital is also rebuilding its QAPI and oversight processes from the bottom up, addressing the Process Oversight, Issue or Problem Management, Regulatory Preparedness and Response, the roll out of a rigorous improvement Process, and the streamlining and focusing of Oversight mechanisms. A revised QAPI program plan was developed and implemented, and now includes a reporting schedule, indicator matrix, departmental breakdown and flow diagram, which was presented and approved at the Quality Council on 1/27/16. The revised QAPI program is comprehensive, data-driven, and robust, reflecting the hospital's operations and services. Identification, measuring, analyzing and tracking of quality indicators is in place to ensure that hospital services and operations are evaluated on an ongoing basis and sufficient performance improvement measures are implemented and monitored to reflect accuracy and effectiveness. High risk, problem prone areas are identified through incident reports (including report at the "flash" meetings described above) or review of departmental quality indicators. The quality indicators were individualized for each campus facility, and approved by the Quality Council (the organization's QAPI oversight committee) on | |

Quality indicators address all clinical services and departments ensuring appropriate integration of these departments and services into the organization wide QAPI program. Services provided by contracted providers are now included in the QAPI program, ensuring full integration into the organization's quality and safety monitoring processes. The Quality Council meeting minutes reflect discussion of these indicators. On 1/27/16, the Quality Council and members of the Executive Leadership met to analyze quality monitoring data. The focus of the meeting was to discuss how the organization monitored all departments and services, including mortalities, hospital acquired and surgically related infections, fall preventions, discharge planning and assessment and prevention of suicide. The Quality Council meeting also discussed activities the organization is implementing to sustain quality monitoring of effective systems to identify, report, investigate and control untoward events and patient safety issues. The Quality Program commenced monitoring on 2/1/16. There shall be weekly reporting to Hospital Leadership teams, with monthly reporting to the hospital-wide Quality Council. Compliance monitoring shall be reported to the Governing Body monthly.<br>Revisions to the program included revamping of the data collection and analysis components of the program and initiation of a data collection tool that allows for critical analysis of collected data via a benchmarked analysis report format that drives critical decision - making in relationship to data presented. Data collection includes, but is not limited to, information on behavioral health patient management, infection control and prevention outcomes, and staff compliance with receipt of influenza vaccinations. | 3/22/16 |

| A 283 | Continued From page 22<br>would determine the level of observation provided and that a patient was to be placed on " suicide precautions " based on the information obtained from the history, legal holds, initial assessment, and Suicide Potential Rating Scale.<br>During reviews of medical records from the VN facility and the CC facility, several records of patients who presented with suicidal ideation were reviewed. The records did not contain Suicide Potential Rating Scale or resultant risk score (see A-286 and A-392).<br>In an interview with the Dir BHU on 12/17/15 at 1000, she stated that she had many concerns with the quality of documentation in the BHU. She stated that the BHU had been looking at the same quality indicators for years, and that they were not looking at the assessment information, including pain assessments. She stated that they had wanted to begin looking at new quality measures, but then the department director changed again. She stated that the change in personnel resulted in a delay in implementing the request for new quality measures. She stated that currently there was no auditing process for the behavioral health unit assessments because the charting was variable.<br>She stated that the behavioral health department met monthly, but that no one from quality attended the meetings, and that she reported informally to the quality department if issues arose.<br>In an interview with the Hosp Sys Dir Quality on 12/17/15 at 1510, he stated that the medical record audit tool used to review records was very generic, and not adequate to catch the missing suicide risk assessments.<br>2) The Quality Council Minutes from October 28, 2015, were reviewed and showed that " There would need to be a deeper analysis . " of the code blues, and there was an intention to address | A 283 | the above prioritization criteria. Use of this prioritization criteria allows for severity, prevalence, incidence and how these issue qualifiers shape indicator development to meaningfully address health care outcomes and patient safety. The indicators are outcome based quality and safety indicators and include, among other things, a review of the hospital's processes for assessing and treating suicidal patients, performing mortality reviews, and addressing patient falls. Benchmarks are established to assist with identifying non-conformity to desired practice or goal. Performance outcomes reflected via indicator monitoring, failing to meet desired benchmarks will be analyzed for root cause and corrective action will be implemented. The Quality Council meeting minutes reflect discussion of these indicators. On 1/27/16, the Quality Council and members of the Executive Leadership met to analyze quality monitoring data. The focus of the meeting was to ensure that all departments and services were integrated into the hospital-wide QAPI program and to discuss how the organization monitored quality and safety activities throughout the organization. The Quality Council meeting also discussed activities the organization is implementing to sustain quality monitoring of effective systems to identify, report, investigate and improve patient care and safety. The Quality Program commenced monitoring on 2/1/16. There shall be monthly reporting to the hospital-wide Quality Council. Compliance monitoring shall be reported to the Governing Board monthly.<br>2. A member of the Quality Department now attends the Behavioral Health monthly department meetings to ensure appropriate integration of behavioral health quality processes into the hospital-wide QAPI program.<br>3. Hospital Leadership reviewed and revised the "Suicide Risk" policy and the EMR system was changed to allow for a hard stop process to capture suicide risk assessments for all patients on admission. | 3/11/16<br>3/22/16 |

| A 286 | Continued From page 26<br>reporting system for November, 2015, for review, and one was selected from the Code Blue Log for November, 2015. None of the incidents appeared to have been thoroughly reviewed, and none were used as the basis for performance improvement. Departures from hospital policy and from the standard of care for hospitalized patients were noted during a review of the four incidents.<br>1) An incident dated 11/14/15 was reviewed on 12/15/15, and showed that a patient, Patient 508, a 21 year old woman with schizoaffective disorder, was admitted to the behavioral health unit at Culver City, and reported an assault during a stay on one of the psychiatric units, "when I was in the other unit yesterday after I got my shoot (sic) Rayan came to the day room he grabbed my ass and kissed me behind the door". The patient reported two different names for the assailant. The only investigation documented appeared to consist of a review of unit patient names and an interview with one LVN, who stated "nobody witnessed anything". There was no documentation that the patient was questioned about the appearance of the alleged assailant, was asked to identify the assailant, or that the review of possible assailants included unit staff and other staff such as cleaning, kitchen, facility or medical staff who may have been in the unit. There was no documentation to support that other possible witnesses were interviewed.<br>The event was documented as forwarded to the CNO, Quality Staff 2, and Adm Staff 1, but the column for "review completed" was blank, there were no manager's comments and no proposed actions documented.<br>In an interview with the Adm Staff 1 on 12/15/15 at 1415, she stated that the department directors were supposed to respond to incidents, but there was no comment added in this case from the | A 286 | Findings 1-2<br><br>Immediate Action Taken:<br>1. Executive Leadership, the Consulting Team, and the Director of Quality discussed the survey findings and an in-depth revision and restructure of the QAPI program, including revision of how significant adverse events and incidents are identified, reported and managed.<br><br>Subsequent Actions Taken:<br>1. The hospital implemented a process of significant adverse events management improvements and executive awareness through daily "Flash" huddles Monday through Friday (with weekends rolled into Monday's outcome data. Any significant event on the weekend will be reported to the administrator on call). Executive Leadership participates in these meetings where any significant event occurring over the prior 24 hours is brought before senior leadership for immediate review, ensuring the event is managed timely, by the right individuals, through the right method. The hospital is also restructuring its QAPI program and plan to focus on patient safety and improvement in healthcare outcomes. A revised QAPI plan was implemented, which is comprehensive, data-driven, and robust and reflects the hospital's operations and services. Identification, measuring, analyzing and tracking of quality indicators is in place to ensure that hospital services and operations are evaluated on an ongoing basis and sufficient performance improvement measures are implemented and monitored to reflect accuracy and effectiveness. High risk, problem prone areas are identified through incident reports or review of departmental quality indicators and there is a process for analyzing and tracking quality indicators. The quality indicators include, among other things, tracking medical errors and adverse events, analyzing their causes and implementing preventive actions and mechanisms that will help identify and reduce medical errors. | A 286 | Continued From page 27<br>director. She stated that on the surface it looked like there were gaps in the investigation.<br>In an interview with the Dir BHU on 12/15/15 at 1445, she stated she started as the Dir BHU in October. She stated that she did not recall the case, and that she was not sure if there was follow-up of the incident. Documentation of further investigation was requested, but was not provided.<br>In another interview with the Adm Staff 1, on 12/17/15 at 1445, she stated that the investigation of the assault incident did not happen.<br>The record showed that Patient 508 did not receive a suicide risk assessment per hospital policy, and did not have a substance withdrawal risk assessment, despite the history of substance abuse (see A-392).<br>2) An incident dated 11/18/15 was reviewed and showed that a patient, Patient 503, was admitted to the behavioral health unit at Culver City, but remained in the ER overflow area. The nurse could not find the patient medications and profile. The follow-up of the event was reviewed and showed that the ER RN Dir reviewed the incident. A delay of service was identified, and education was documented as the proposed action. However, additional review of the record showed that numerous issues occurred in the care of Patient 503, and the issues were not documented as being identified pursuant to event reporting. The record showed that there was incomplete assessment, care planning and treatment provided to Patient 503 during the Culver City facility admission.<br>The record showed that the patient was transferred from the Van Nuys facility, but there were multiple omissions and inconsistencies in the patient's medical record (see A-392 and A-438).<br>In an interview with the Dir BHU on 12/6/15 at | A 286 | improvement indicators which fail to meet the benchmark will be analyzed for root cause and corrective action will be implemented. Revision of the program to focus on healthcare outcomes through a tightly structured, prioritized indicator monitoring program ensures ongoing improvements are realized through implementation of the QAPI program.<br>2. Hospital Leadership and the Consulting Team reviewed the process for incident reporting, including identification of incidents and assurance that incidents were being reported and properly annotated, aggregated and analyzed. The Quality Department resources were reallocated to provide for a quality director, a risk manager and a director of education, effective 1/22/16, to allow for dedication of resources for incident management. Incidents are reviewed daily (Monday through Friday) with inclusion of trended data resulting from incident review included in QAPI reporting as appropriate to the incident topic. For example, an incident on a restraint issue or an incident on a patient fall would be included in the numerator/ denominator data for indicators related to restraint or fall management. Significant and unique incidents are addressed in the daily flash huddles (Monday through Friday) and to the Quality Council on an as occurrence basis and up to the MEC and Governing Board. A discussion of the event, any causal analysis or event analysis is presented with the QAPI report.<br><br>Compliance and Monitoring:<br>Data on audits is tracked, trended, analyzed and reported monthly to the Quality Department. Compliance is reported to the Quality Council, MEC and Governing Board on a monthly basis, and is used for performance improvement measures. The Quality Council renders determinations of frequency and volume of reporting data based on the results (in terms of healthcare outcomes) of trended data reported. | 3/16/16 |

The consultants and Medical Staff Team worked collaboratively on reviewing the current process for OPPE. The following actions were taken between 2/15/16 and 3/22/16:<br>a. A review of the appointment and reappointment process in the bylaws was performed and it was determined that these processes did not require any revisions.<br>b. Medical Staff Leadership reviewed the existing "OPPE/FPPE" Policy. The policy was revised to focus on ensuring the medical staff conducts periodic appraisals of all practitioners granted privileges. This appraisal may include peer review, FPPE, OPPE or performance data for practitioners (e.g., physicians and AHP) on an ongoing basis. Data is collected, analyzed and discussed with the practitioner so as to enable the medical staff to assess and ensure the competence of its practitioners, and to take appropriate steps to improve performance of these practitioners as part of its ongoing commitment to high quality care. The MEC approved the revised policy on 3/15/16 and the Governing Board on 3/16/16.<br>c. The CEO, Director of Medical Staff Services and Chief of Staff met on 3/2/16 to discuss concerns with the identified pre-printed forms. It was decided to cease using these forms and reinstitute use of the "Practitioner Performance Profile" Form to identify the current available data for reappointments, including, among other things, practitioner findings on core measures and core competencies (e.g., patient care, medical knowledge, communication, professionalism, practice-based learning and improvement, and systems based practice), surgical site infections (for the department of surgery) and readmissions within 30 days (for the department of medicine), utilization review, number of suspension days, blood use, medication use, mortality/morbidity rates, hospital acquired infections, risk management, grievance/complaint, and peer review issues. | 2/15/16 and 3/22/16 |

Hospital Leadership and the Director of Medical Staff Services worked collaboratively with the Director of Business Integration to set up an electronic system so that individual Department Leadership can input the necessary data for reporting outcomes, which is used for evaluation by the Medical Staff Services Department for reappointments and for ongoing monitoring. It is anticipated that this electronic system will be functional by 6/1/16. In the interim, the data is being collected manually by the individual Department Leadership, including Quality, Infection Control, Radiology, Laboratory/Blood Bank, Pathology, Case Management, Health Information Management Department and other medical staff departments.<br>e. The Medical Staff Services Department and physician leadership re-evaluated reappointments for all practitioners from January 2016 through March 2016 and reviewed those practitioners due for reappointment in April 2016 to assess compliance with establishing/evaluating the physician's competency prior to re-appointment. The data for reappointment was collected and profile developed, which was resubmitted to the MEC for re-review and approval. | 3/16/16 |

This failure has the potential of not having readily available the assigned RN to manage the care of the intensive care patient population.<br><br>Findings:<br>1) Patients did not receive suicide risk screening per hospital policy.The hospital policy, Precautions BHU.053 (revised 6/2014) was obtained at the Van Nuys facility on 12/17/15. The policy showed that the "Suicide Potential Rating Scale (addendum A) shall be completed as part of the Initial Nursing Assessment and daily assessment for each patient", and that the score of the assessment would determine the level of observation provided.<br>The hospital policy, Precautions (reviewed 8/2015), was obtained from the Culver City facility, and showed that a patient was to be placed on "suicide precautions" based on the information obtained from the history, legal holds, initial assessment, and Suicide Potential Rating Scale. The Suicide Potential Rating Scale was to be completed as part of the initial nursing assessment and daily assessment for each patient, and was to generate a risk score that would prompt different levels of observation. The Suicide Potential Raking Scale appended to the policy included assessment of 8 parameters, including age, socialization support system, onset of suicidal ideation, plan, availability of means, symptoms, planned outcomes, and recent stressors. A score was to be determined for each parameter, and based on the total score, precautions were determined, including no precautions for a score of 4-9, Q15 minute rounds, " S/I " indicated on rounds board and documentation in progress notes each shift for a score of 10-19, and 1:1 monitoring until evaluation by attending for patients with scores of | A 392 | Finding 1<br><br>Immediate Actions Taken:<br>1. Executive Leadership (including nursing) reviewed the findings from the survey exit. It was determined an in-depth review of staffing was necessary to identify and remediate any staffing vulnerabilities.<br>2. The staffing matrix was reviewed by Senior Nursing Leadership to ensure each department was appropriately staffed. It could not be identified that issues cited related to nursing failure to follow the precautions policy were related to staffing.<br><br>Subsequent Actions Taken:<br>1. Nursing Leadership reviewed and revised the "Precautions" policy to current practice, which included elimination of the Suicide Potential Rating Scale. The policy was renamed the "Suicide Risk" policy. Suicide screening is done on admission (or prior to admission in the ED). If the patient responds yes to any of the suicide questions, a suicide assessment is performed and care initiated based on the individual patient's assessed needs (e.g., 1:1 observation). The facility staff notifies the physician when the patient makes statements related to suicidal ideation. All clinical departments regularly assess the clinical condition of the patient according to policy. The MEC approved the policy on 3/15/16 and Governing Board on 3/16/16. Nursing staff education was performed.<br>2. Care Facilitation process was implemented to assess on an ongoing basis (in real time) compliance with staffing to allow for appropriate suicide screening and resultant patient protection. Care facilitation is a process of concurrent record compliance monitoring whereby a "care facilitator" (licensed healthcare professional) identifies any noncompliance with the subject matter, intercepts the nurse/ provider in real time, provides "just in time" education and training to correct clinical or documentation process issues. | A 392 | Continued From page 41<br>In an interview MR Staff 1 on 12/16/15 at 1145, she reviewed the medical record of Patient 507 and stated that there were no nurses notes prior to the code blue, no evidence of physician notification, and that the last order for the patient recorded prior to the 1845 code blue was at 0813 in the morning.<br>The medical record of Patient 504 was reviewed on 12/14/15 and showed that he was to have outpatient surgery on 12/14/15. The Preoperative Orders included an order to "Instill one drop of the left eye every 5 minutes for 3 doses on call to OR: a) Marcaine 0.75% or equivalent topical anesthetic " . The other four eye drops ordered included Cyclogyl, Mydriacyl, Phenylefrin, and Ciprofloxacin. The record showed that those four drops were given, and the times of administration recorded, but not the Marcaine.<br>During an interview with the Sr Mgr Medical Records on 12/15/16 at 1050, she was unable to find documentation that the Marcaine was administered.<br><br>2) On 12/17/15, at 9 a.m., during a tour and interview of the ICU, charge nurse (LN5) was questioned about patient N106's medical condition. LN 5stated, "That's RN3's patient." When asked where RN3 could be found the LN 5 stated, "I think she is caring for her other patient outside of the ICU." RN3 was located outside of the ICU, in room 305C in the MAC unit, RN3 was dressed in a protective isolation gown, caring for Patient N104 outside of the ICU.<br><br>During an interview with the DON1 on 12/17/15, at 9:15 A.M., DON1 was questioned as to the usual and customary staffing assignments. DON1 stated, "The staffing ratio is 1:2 (nurses to patients) and if the nurse is away from the unit, | A 392 | Finding 2<br><br>Immediate Actions Taken:<br>1. Nursing Leadership reviewed the identified patients and there was no adverse findings resulting from the staffing assignment.<br>2. Nursing Leadership changed the staffing assignment at the time of survey to ensure direct visualization of ICU patients by assigned nurse at all times. One nurse was assigned to care for the patient in the room outside the ICU.<br>3. Nursing Leadership provided education to Nursing Supervisors and ICU charge nurse to ensure appropriate nursing assignment for ICU patients. ICU staff is either assigned to care for patients inside the ICU or to the room outside the ICU so that there is direct visualization. A log tool was created to show the ICU patient assignments. The Charge nurse or qualified designee is assigned to provide coverage for breaks to the ICU nurse providing care to the patient in the room outside the ICU.<br><br>Subsequent Action Taken:<br>1. Nursing Leadership instituted monitoring of staff assignments in the ICU, effective 12/18/15. Nursing Leadership continued ongoing education to Nursing Supervisors and Charge Nurses, which resulted in 100% compliance for March to date.<br><br>Compliance and Monitoring:<br>Nursing Supervisor or designee performs daily staffing review of ICU assignments to achieve the goal of 100% compliance with appropriate staffing of the room outside the ICU. Data is analyzed and reported monthly to the Quality Council, MEC and Governing Board until sustained compliance is achieved and process control is demonstrated. Ongoing monitoring will occur until the Quality Council determines sustained compliance has occurred, at which time the Council will determine what adjustments to monitoring are necessary for ongoing sustainability (e.g., random samples or inclusion of the issue as an ongoing indicator). | 12/17/15<br><br>12/17/15<br><br>12/17/15<br><br>3/10/16 |

| A 395 | Continued From page 43<br><br>This Standard is not met as evidenced by:<br>Based on observation, interview, and record review, the facility failed to ensure nursing staff evaluated and implemented nursing care according to professional care standards for patients with Foley catheter devices as evidence by the following:<br><br>1. Foley Catheters were inserted without a doctor's order in the Critical Care Unit (CCU), Step Down unit and Emergency Department (ED).<br><br>2. Facility staff did not evaluate for urinary catheter insertion indication and daily neccessity as indicated per policy.<br><br>These failures have the potential to have a negative health outcome for patients' with a Foley Catheter.<br><br>Findings:<br><br>According to the California Nursing Practice Act, Scope of Regulation, Section 2, Chapter 6. Article 2, (b) (2) indicates "Direct and indirect patient care services, including, but not limited to, the administration of medications and therapeutic agents, neccessary to implement a treatment, disease prevention, or rehabilitative regimen ordered by and within the scope of licensure of a physician...as defined by Section 1316.5 of the Health and Safety Code.<br><br>1. During a tour of the CCU and concurrent interview with Administrative staff (AS) and Charge nurse (CN) on 12/15/15 at 10:05 a.m., Patient N-200, N-201 were observed with a Foley catheter device. The AS and CN were asked to | A 395 | Findings 1 and 2<br><br>Immediate Actions Taken:<br>1. Nursing Executive Leadership reviewed the findings after the survey. It was determined nursing staff would benefit from refresher education on multiple topics and a search for an outside education vendor that could provide deep education in a consistent fashion to nursing staff was needed to augment the organization's educational program. An outside education firm was hired, with these skilled educators performing intensive education to staff on many of the core nursing practices.<br>2. It was determined the foley catheter policy provided at time of survey was not related to management of the acute inpatient population.<br><br>Subsequent Actions Taken:<br>1. The referenced "Foley Catheter Need Assessment " Policy was reviewed and identified to be the subacute unit policy. Nursing Leadership developed a new policy for acute inpatients entitled "Indwelling Urethral Catheter Management." The physician is responsible for writing the order and justification for placement of an indwelling urethral catheter to be placed. Healthcare providers must ensure and document an appropriate indication for an indwelling urethral catheter to be placed. The policy was approved by the MEC on 2/16/16 and Governing Board on 2/24/16. Nursing staff was educated on the policy.<br>2. The Chief of Staff sent a memorandum to medical staff practitioners reminding them of the need for an order and indication for the indwelling catheter.<br>3. The CNO worked with the consultants to implement facilitation, a process of concurrent record compliance monitoring whereby a "care facilitator" (licensed healthcare professional) identifies any noncompliance with the subject matter, intercepts the nurse/provider in real time, provides "just in time" education and training to correct clinical or documentation process issues. This method allows for role | 12/19/15 - 2/19/16<br><br>12/29/15<br><br>3/22/16<br><br>3/18/16<br><br>2/5/16 |

| A 405 | Continued From page 47<br>law, including scope of practice laws, hospital policies, and medical staff bylaws, rules, and regulations.<br><br>(2) All drugs and biologicals must be administered by, or under supervision of, nursing or other personnel in accordance with Federal and State laws and regulations, including applicable licensing requirements, and in accordance with the approved medical staff policies and procedures.<br><br>This Standard is not met as evidenced by:<br>Based on observation, interview, and record review, the facility failed to ensure medications were administered according to the prescriber's orders for two randomly observed patients (P100 and P101). Further the facility failed to prepare and administer medications in accordance with the facility's policies and procedures, as evidence by the following:<br><br>1. Intravenous medication tubing was not labeled as per policy.<br>2. Medications administered without indication or pain assessment.<br>3. Medications were withdrawn by one nurse and administered by a different nurse.<br><br>Patients potentially did not receive the full benefits of ordered treatments.<br>Failure to follow medication administration policy has the potential of resulting in a negative outcome to patient's health.<br><br>Findings:<br><br>1. During the observation of medication administration on the Telemetry Unit at Culver | A 405 | Findings 1-7<br><br>Immediate Actions Taken:<br>1. Nursing Leadership discussed the survey finding regarding registry nurses and administration of narcotic medication. The "Orientation and Competency Registry/ Contract/Temporary Personnel" policy was reviewed which provides that an agency nurse's licensure is deemed competent to perform the duties recognized by the State Board of Registered Nurses. This would include administration of narcotic medications. At the time of the survey, Nursing Leadership instructed the nursing staff that if they pulled the medication from the Omnicell, it was their responsibility to administer the medication to the patient. While Pharmacy addressed issues with the Omnicell, the staff nurses administered narcotic medications for the registry nurses. On 2/26/16, the Omnicell was reset to allow registry nurses to be able to access and dispense their own medication to patients. Charge nurses educated the registry staff to use of the Omnicell.<br><br>Subsequent Actions Taken:<br>1. Nursing Leadership reviewed the "Medication Administration" policy, which did not require any revisions. The "Pain Management" policy was reviewed and revised to clarify medication assessments and reassessments and more closely align with actual practice. The nurse assesses the patient in a time frame appropriate for pain medication response, however the documentation of this assessment was not required in a concurrent note. The evaluation of pain effectiveness assessments must, however, be documented by the end of the nurse's shift. The MEC approved the policy on 3/15/16 and the Governing Board on 3/16/16. The "IV Tubing" policy was reviewed and did not require any revisions. Nursing staff was re-educated. | 2/26/16<br><br>3/22/16 |

| A 438 | Continued From page 54<br><br>This Standard is not met as evidenced by:<br>Based on, Interview and record review, for one patient, Patient 505, the hospital failed to ensure that documentation regarding the patient's desire for CPR was recorded in the medical record and failed to ensure that transfer, assessment and treatment records were available in the medical record for one patient, Patient 503, transferred from the VN to the CC facility, creating the risk of the patient's wishes regarding emergency treatment not being followed. Further, the hospital failed to accurately reflect intensive out-patient admissions when they routinely and systematically readmitted every intensive out-patient every month despite the individual patients not being discharged from the program. This failure creates the potential of inaccurately reflecting the patients length of stay and episodes of care within the intensive out-patient program.<br><br>Findings:<br>1) During a review of the medical record of Patient 505 on 12/14/15, the record contained a Physician's Orders sheet that was pre-printed with CPR orders that were to be selected by means of checking a box. The order sheet read, "Must be filled out at the time of admission and with any change in code status". There were boxes to select either "full CPR" or "no CPR", but neither was selected. The form bore a date and time, but no signature. The emergency admit form showed that the patient was 84 and being admitted for failure to thrive. A pre-procedure evaluation on 12/11/15 showed that she was awake and oriented.<br>During an interview with the Sr Mgr Medical Records on 12/15/15 at 1050, she stated that the form should have been completed upon admission, and that she was not sure why it was | A 438 | Findings 1 and 2<br><br>Immediate Actions Taken:<br>1. Hospital Leadership discussed the survey findings and compliance strategies.<br><br>Subsequent Actions Taken:<br>1. The pre-printed Physician Order Sheet for CPR orders was reviewed and eliminated. Nursing Leadership worked with the IT Department to create a section in the nursing assessment to identify/clarify the code status with the patient/patient representative. The EMR system has a "hard stop" in effect that requires the nurse to complete this section before completing the assessment. The patient will remain on a full code status until the code status is clarified. Nursing staff was educated on the process.<br>2. Hospital Leadership reviewed and revised the process for interfacility transfers. The Nursing Supervisor is responsible for coordinating the transfer, including ensuring that pertinent clinical information from the medical record is provided at the time of transfer. Nursing Supervisors were inserviced.<br>3. Nursing Leadership discussed the survey findings and process for nursing care planning. The "Interdisciplinary Plan of Care" Policy was revised and renamed the "Documentation" Policy. The nursing staff develops and keeps current, a nursing care plan for each patient that addresses the patient's individual acute hospitalization needs based on assessment outcomes. Care planning was discussed as those patient needs that require acute response including discharge planning and psychosocial issues, however if a patient was receiving treatment for a chronic issue that was not impacting the current hospitalization, nursing staff were to prioritize the need and focus planning on the acute condition. The MEC approved the policy on 3/15/16 and Governing Board on 3/16/16. Nursing staff was inserviced on the policy. | 12/29/15<br><br>3/22/16<br><br>3/22/16<br><br>3/22/16 |

| A 438 | Continued From page 55<br>not completed.<br>An incident dated 11/18/15 was reviewed and showed that a patient, Patient 503, was admitted to the behavioral health unit at Culver City, but remained in the ER overflow area. The nurse could not find the patient medications and profile. The record showed that the patient was transferred from the Van Nuys facility, but there were no transfer documents found in the Culver City record. Records from the Van Nuys admission were requested and showed Patient 503 came to the Van Nuys hospital location on 11/13/16. The Physician's Initial Assessment & Preliminary Treatment Plan dated 11/14/15 showed the patient had schizoaffective disorder and was depressed, suicidal, and had the intention to overdose on pills. The Patient Transfer and Referral Record in the Van Nuys record showed the primary diagnosis as schizoaffective disorder, and did not include information about suicidality. The Multidisciplinary After Care Instructions dated 11/16/15 showed that the patient was to "transfer to ER Culver City due to breathing". The form showed that the absence of suicidal ideation was to be documented, but there was no indication of a psychiatric condition or suicidality documented on the form.<br>A treatment plan was formulated at the Van Nuys facility, including identification of triggers and coping skills. Medical record documentation at the Culver City facility did not include transfer documents and did not include the treatment plan from the Van Nuys facility. The record at Culver City showed that the patient was seen in the ER on 11/16/15 and the MD Note indicated the patient was having suicidal ideation. The triage note from the ER on 11/16/15 showed the chief complaint was suicidal ideation, with a plan to cut herself. Patient 503 was subsequently admitted | A 438 | 4. Intensive Outpatient Program (IOP)<br>Leadership discussed the discharge planning criteria. The "Discharge Planning and Discharge Criteria" policy was reviewed and did not require any revisions. Patients are discharged from the program based on the following criteria: (a) the treatment team has determined that the patient has adequately accomplished the goals of treatment; (b) the patient's condition necessitates inpatient treatment; (c) the patient's medical condition is such that the required level of nursing care is beyond the capability of the program; and (d) the patient's behavior is violent, threatening or inappropriate. IOP staff was reinserviced on the discharge policy.<br><br>Compliance and Monitoring:<br>Data is collected by the care facilitators for care planning and code status assessment, reported daily, aggregated and reported to leadership at least weekly to allow for leadership to focus resources on those issues and units where continued vulnerabilities exist. The goal is to achieve 100% compliance with code status assessments and nursing care plans. The Director of Behavioral Health or qualified designee reviews discharge records monthly to monitor compliance with discharge criteria per hospital policy. The goal of compliance is 100%.<br><br>Data is analyzed and reported monthly to the Quality Council, MEC and Governing Board until sustained compliance is achieved and process control is demonstrated. Ongoing monitoring will occur until the Quality Council determines sustained compliance has occurred, at which time the Council will determine what adjustments to monitoring are necessary for ongoing sustainability.<br><br>Persons Responsible:<br>Chief Nursing Officer<br>Director of Behavioral Health | 3/22/16 |

Executive Leadership discussed the survey findings and the process for obtaining consents. 12/29/15<br><br>Subsequent Actions Taken:<br>1. The "Informed Consent" policy was reviewed and revised to align with current practice. Informed Consent is required for those procedures which are complex or involve material risks that are not commonly understood. The patient's physician is responsible for providing the information the patient needs in order to make an informed decision and for obtaining the patient's informed consent or refusal for the recommended procedure. The hospital's role in the informed consent process is to verify that the physician obtained the patient's informed consent before the procedure. Additionally the hospital's consent form (the document on which the patient's consent is annotated) was reviewed and revised to streamline the narrative, simplify the format and reduce the overall form from six (6) pages to two (2) pages. The hospital elected to maintain a separate consent for blood transfusions and psychotropic medications. The consent form was approved by the MEC on 3/15/16 and the Governing Board on 3/16/16. Nursing staff was educated and the form was implemented by 3/22/16. 3/22/16<br>2. Hospital Leadership sent a memo to physician staff reminding them of the informed consent process. 1/21/16<br>3. I am an interim supervisor and I have only been here for two months." | A 467 | | |
| A 490 | 482.25 PHARMACEUTICAL SERVICES<br><br>The hospital must have pharmaceutical services that meet the needs of the patients. The institution must have a pharmacy directed by a registered pharmacist or a drug storage area under competent supervision. The medical staff is responsible for developing policies and procedures that minimize drug errors. This function may be delegated to the hospital's organized pharmaceutical service.<br><br>This Condition is not met as evidenced by:<br>The hospital failed to ensure the Condition of Participation: CFR 482.25 Pharmaceutical Services was met by failing to:<br><br>1. Ensure (1) the temperatures for medication refrigerators were monitored as specified by policy; (2) out-of-range temperatures for medication refrigerators were acted upon; (3) inconsistent temperatures for medication refrigerators from two different thermometers were addressed; (4) two different medication strengths were not stored together; (5) medications were stored according to manufacturer's specifications; (6) the contents of the crash carts were accurate; (7) the pharmacist had oversight of the crash cart's contents; (8) renal dosing by the pharmacist was consistent; (9) medications were disposed of safely according to policy; and (10) medications were stored under conditions of sanitation. (Refer to A | A 490 | A 490 482.25 Pharmaceutical Services<br><br>Executive Leadership collaborated with hospital and corporate pharmacy leaders, including the Vice President of Pharmacy Operations and regional pharmacy directors. The purpose was to improve the method for ensuring medication temperature consistency in medication refrigerators through repair or installation of new medication refrigerators and thermometers, ensuring proper sanitation in areas where medications are stored, revising storage methodology for storage of the same medications with differing strengths, storing medications pursuant to the manufacturer's recommendations, ensuring accuracy and oversight of medication content in all crash carts through revisions in policy and practice and requiring pharmacy accuracy verification, ensuring consistency in renal dosing via revision of renal dosing policy and practice, and providing for safe medication disposal by reeducation. Accuracy of scheduled drug records and recognition of standards related to identified high alert medications was improved through refresher education of pharmacy staff. Shortages of medications was addressed by revision to the inventory list to provide for a column reflecting appropriate medication alternatives. Use of compounded or repackaged drugs was examined with practice changes implemented to ensure correct formula and accurate beyond use dating. Medication security was addressed through nursing education. Process revision was implemented to ensure mislabeled or unusable medications are not available for use. The inventory for night | 3/22/16 |

Pharmacy Leadership met immediately following the survey to discuss use of night lockers and compliance requirements. The "After Hours Procurement of Medication" policy was reviewed and did not require any revision. The night locker inventory list was analyzed to ensure consistency with contents and appropriate par levels. Pharmacy staff reviewed the night locker at Hollywood to ensure that contents were current and matched the inventory list. The Pharmacist is responsible for checking and monitoring the night locker inventory and par levels on a daily basis. The Director of Pharmacy educated the Hollywood campus pharmacy staff.<br><br>Compliance and Monitoring:<br>The Director of Pharmacy or qualified licensed designee shall perform night locker inventory daily. Any discrepancies in the inventory list and the actual content of the locker are immediately remediated with the list and the content reconciled. This inventory and reconciliation is ongoing and is a component of usual pharmacy operations. Ongoing discrepancies will be trended, and if identified, this issue will be forwarded to the Medication Safety Committee for process management and resolution. The Director of Pharmacy is responsible for ensuring daily inventory assessments and content reconciliation occurs as a component of his/her job responsibilities. All medication storage areas are inventoried monthly. It is during this required monthly inspection that any variances in the pharmacist's oversight and inspection process are identified. Thus, the monthly inventory serves as a redundant process validation assessment, with reporting to the Medication Safety Committee as stated.<br><br>Person Responsible:<br>Director of Pharmacy | 12/18/15 |

| A 701 | Continued From page 97<br>1) Ensure the temporary air handler unit feeding air to certain departments (e.g. 6th, 5th, partial of the 4th, and 2nd floor) was functioning well enough to provide heated air according to state regulations, or hospital policy and at a comfortable level for patients, staff and visitors.<br><br>2) The hospital did not ensure that follow-up of out of range OR temperature and humidity was documented, creating the increased risk of substandard OR environmental conditions and poor surgical outcomes.<br><br>3)The facility failed to ensure emergency equipment was properly maintained. The fourth floor crash cart had a defibrillator which was not plugged into a red plug to ensure battery was charged should there be a power failure.<br><br>Findings:<br><br>1) According to the facility's record review on 12/12/15 at 10:00 a.m., records indicate the facility had been using a temporary air handler unit since March, 2015. The facility was granted a permit on 12/9/15 from the office of statewide health planning and developement to begin installation of a new air handler unit. Meanwhile the facility is using a temporary air handler that is not providing heated air to patient's rooms in certain areas of the Pavilion (e.g. 6th, 5th, partial of the 4th, 2nd floor, etc.) and patients and staff are complaining that "they are cold".<br><br>During an interview on 12/15/15, at 10:27 a.m., the project manager (PM2) in charge of restoration of the air handler installation (OSHPD Project #S151262-19-00) stated that the temporary air handler feeds the air into the patient rooms of the Pavilion (hospital building). | A 701 | Finding 1<br>1. Hospital Leadership discussed the issues related to the HVAC systems. A heating coil was placed into the temporary air handler on 12/31/15 to ensure that the identified rooms/ areas could be heated to appropriate temperatures, or as stated cooled. Nursing staff monitored the identified rooms/areas to ensure that appropriate temperatures were maintained and can be consistently controlled. Temperatures were recorded on log sheets. Random monitoring occurred daily in patient rooms through 3/2/16. Temperatures have been stabilized. Monitoring random rooms now during weekly EOC rounds. Compliance is reported monthly to the Quality Council (until the Quality Council determines monitoring of the building is sufficiently conducted and then reporting will be provided quarterly to the Quality Council) and quarterly to the Governing Board. The permanent unit is being addressed through OSHPD project number S151262-19-00. 6<br>2. Compliance with HVAC systems is monitored through the PM program and scheduled EOC rounds.<br><br>Compliance and Monitoring:<br>Data on compliance is tracked, trended, analyzed and is reported monthly at the EOC Committee. Corrective action is taken as necessary. Compliance is also reported monthly to the Quality Council (until the Quality Council determines monitoring of the building is sufficiently conducted and then reporting will be provided quarterly to the Quality Council) and quarterly to the Governing Board.<br><br>Persons Responsible:<br>Vice President of Facilities Development<br>Director of Facilities | 3/2/16 |

| A 701 | Continued From page 103<br>they are given blankets. The CNs places a call to facilities or bio-med in order for someone to come and adjust the heat. But this cold temperature problem has "Been going on for a while".<br><br>On the same date after the tour, temperature logs that hospital staff recorded in patient rooms at 2:00 a.m., 4:00 a.m., and 6:00 a.m. were reviewed:<br>a) In P6 (Sixth Floor), temperatures in 15 of 40 patient rooms remained below 68°F from 2 a.m. to 6 a.m. with the lowest temperature of 65.2°F recorded at 2:00 a.m. in Room 635.<br>b) In P5 (Fifth Floor), temperatures in 12 of 41 patient rooms remained below 68°F from 2 a.m. to 6 a.m. with the lowest temperature of 65.8°F recorded at 6:00 a.m. in Room 534.<br>c) In P2 (Second Floor), temperatures in 9 of 44 patient rooms remained below 68°F from 2 a.m. to 6 a.m. with the lowest temperature of 64.5°F recorded at 6:00 a.m. in Rooms 224, 225, and 226.<br><br>Per these observations, interviews, and log reviews, the facility failed to ensure the provision of adequate central heating to the patient rooms either through the HVAC system or any other means. The temperatures remained under facility policy ranges and state regulations.<br><br>2.) During a tour of OR 1 on 12/18/15 at 1445, there was an hourly temperature and humidity monitoring log posted. The log had columns for recording temperature, humidity, time, initials of | A 701 | Finding 2<br><br>Actions Taken:<br>1. Hospital Leadership reviewed the "Temperature and Humidity" policy, which was revised and renamed the "Temperature and Humidity Monitoring in Operative and Invasive Procedural Areas" policy. The Hospital follows the humidity range of 30 to 60%. The policy was revised to allow the surgeon to raise or lower the temperature of the operating room temporarily for a given case for specific reasons (e.g., lower temperature during long joint cases with production of sweat under lights for hours, pediatric cases where the surgeon desires a warmer temperature). This policy was approved on 3/15/16 by the MEC and 3/16/16 by the Governing Board.<br>2. Formal and informal meetings were held during the weeks of 1/18/16 – 2/12/16 between Executive Leadership, facilities management, surgical services and ancillary services regarding humidity levels. A presentation was provided on 2/11/16 to Quality Council, Infection Control Committee and Governance regarding temperature and humidity requirements and the organization's compliance level to raise awareness at leadership levels for connection between temperature/humidity and potential infection control and fire safety risk. After repair of the HVAC system, hourly readings were transitioned to daily readings for all areas where surgical/procedural cases were not performed (e.g., sterile supply and other areas where sterile instruments/supplies are required to be stored under specific temperature/humidity ranges). Temperature and humidity readings were taken before each case in surgical/procedural areas to validate ongoing range stability. A contracted vendor installed remote temperature/humidity readers in the operating rooms and cardiac catheterization laboratory. The Hospital had the vendor re-evaluate the system on 2/10/16 and they identified that the system was operating properly. The contract vendor technician educated facilities | 3/16/16<br><br>1/18/16 – 3/16/16 |

(Refer to A-0749) | A 747 | The Hospital assures that it has a comprehensive infection control program that provides for the prevention, control and investigation of infections and communicable diseases. A sanitary environment is maintained to avoid sources and transmission of infection. Hospital Leadership and the Director of Infection Control reviewed the survey findings and worked collaboratively to address the identified issues as discussed below. Governance approved of changes to the infection control and prevention program and plan. An evaluation of the 2015 infection control and prevention risk assessment was conducted by an APIC certified infection control practitioner (CIC) specialist engaged by the hospital to analyze gaps in the existing infection control program and assist with remediation of vulnerabilities within the program. From the 2016 risk assessment and analysis of the Infection Control program, the hospital-wide infection control program and plan for 2016 was developed. This new program and plan addresses core practices and infection prevention techniques necessary to minimize the risk of spread of infection and contagious disease throughout the organization. The plan was approved at the Infection Control Committee on 3/10/16, the MEC on 3/15/16 and Governing Board on 3/16/16. Additionally, Executive Leadership hired a seasoned full-time Infection Control Preventionist to oversee and deploy the new Infection Control and Prevention Program. Implementation of a structured rounding surveillance process was implemented.<br><br>Infection Control practices were reviewed regarding maintenance of a sanitary environment and prevention of transmission of infectious and communicable diseases. Education on infection control has been and continues to be provided to staff on a variety of topics, including maintaining sterility of equipment and instruments in the surgical and procedural environment. Audit tools were | 3/16/16 |

The facility failed to ensure competent staff trained on job/duty specific current national recognized standards and facility policies regarding sterile processing of surgical instruments, the storage of sterile supplies and area specific, facility adopted infection control national recognized standards. Consequently, the facility failed to ensure:<br><br>1. Staff is trained and competent to effectively maintain sterile surgical instruments, storage and the environment of care for the decontamination area according to nationally recognized standards and facility policy.<br>a. Failed to ensure restricted areas and traffic patterns in procedure areas are identified and maintained in accordance with nationally accepted standards of practice.<br><br>1.Traffic through the pass of decontamination to Sterile Storage is monitored for cross contamination. PPE is not changed and Hand Hygiene is not observed allowing for cross contamination.<br><br>2.The cleanliness of the area known as the Decontamination room.<br><br>3.The facility staff members were trained and competent to ensure surgical<br><br>2. The facility staff members were trained and competent to ensure surgical instruments are effectively decontaminated to ensure the sterility process:<br>The facility failed to ensure:<br>a. Decontamination room maintained in accordance with nationally recognized standards | A 749 | Findings 1-4<br><br>Immediate Actions Taken:<br>1. Executive Leadership met immediately following survey and determined an additional infection control practitioner was needed.<br>2. 100% of instruments were inspected, with any affected instruments either refurbished or discarded and replaced. All instruments were reprocessed following staff re-education on sterilization.<br><br>Subsequent Actions Taken:<br>1. Hospital Leadership and the Director of Infection Control reviewed and revised the Infection Control Plan and Program. An evaluation of the 2015 infection control and prevention risk assessment was conducted by an APIC certified infection control practitioner (CIC) specialist engaged by the hospital to analyze gaps in the existing infection control program and assist with remediation of vulnerabilities within the program. From the 2016 risk assessment and analysis of the Infection Control program, the hospital-wide infection control program and plan for 2016 was developed. This new program and plan addresses core practices and infection prevention techniques necessary to minimize the risk of spread of infection and contagious disease throughout the organization. The plan was approved at the Infection Control Committee on 3/10/16, the MEC on 3/15/16 and Governing Board on 3/16/16.<br>2. The Director of Infection Control and the OR Director conducted extensive education with OR and sterile processing staff regarding a) proper cleaning, sterilization and maintaining sterile surgical instruments/storage and environment of care; b) traffic patterns; and c) use of PPE.<br>3. The Decontamination Room is on a schedule to be terminally cleaned during usual days of operations. A checklist was developed to ensure compliance with terminal cleaning. During an observation in the surgical corridor on 12/14/15 at 1230 p.m., a physician in scrub attire, MD9, was observed handing two large blue-wrapped trays to RN 7 at the desk. He told RN 7 that the trays were "already sterile".<br>In an interview with RN 7 at 1231 p.m., she stated that the trays were for a surgery scheduled for 1230, and that she was not sure why the surgeon brought them in right now. She stated the trays contained special retractors. She was asked to show on the surgical log which surgery they were for, and indicated that they were for a knee surgery scheduled for Patient 501 in OR 4.<br>In an interview on 12/14/15 at 1235p.m., with OR TECH 2 in OR 4, he stated that MD9 often brought his own instruments, such as a rondeur and handle.<br>The surgeon failed to bring instruments in a sufficient time prior to the surgery to allow for sterile processing of the instruments.<br>5. Employee health policies and procedures did not follow the facility adopted, nationally recognized CDC guidelines for immunizations of health care workers that state:<br>· "Healthcare workers include physicians, nurses, emergency medical personnel, dental professionals and students, medical and nursing students, laboratory technicians, pharmacists, hospital volunteers, and administrative staff ".<br>· " (...recommends that health care providers receive vaccinations for diseases for which routine vaccination or documentation of immunity is recommended because of risks in the workplace (i.e. hepatitis B, seasonal influenza, measles, mumps, rubella, pertussis, and varicella) " | A 749 | Finding 5<br><br>Immediate Actions Taken:<br>1. Executive Leadership discussed the survey findings and available staff resources.<br><br>Subsequent Actions Taken:<br>1. Hospital Leadership and the Director of Infection Control reviewed and revised the "Facility-wide Influenza Plan (seasonal)" and "Respiratory Etiquette and Mandatory Facility-wide Vaccination" and "Mask Use" policies to include the distribution of a colored badge signifying the staff member or LIP has received the influenza vaccine for the current season. The color of this badge will change annually. The policies were approved by the Infection Prevention Committee in an Ad-hoc meeting 2/29/16, MEC on 3/15/16 and Governing Board on 3/16/16.<br>2. The Hospital hired an Infection Control Practitioner.<br>3. The Infection Control Committee reviewed the process for TB testing of medical staff members and an analysis of current community standard was conducted. The process for TB testing coinciding with the two year reappointment cycle was implemented on 2/29/2016. This information will be monitored and required for reappointment to the medical staff.<br>4. The Infection Control Committee reviewed the process for MMR vaccination and an analysis of current community standard for medical staff members was conducted. The vaccination status is tracked for employees through the HR department. Community standard does not support the documentation of MMR vaccination status for medical staff members in the absence of an exposure or other validated need. Community standard is followed for medical staff members. | 12/29/15<br><br>3/16/16<br><br>2/8/16<br><br>2/29/16<br><br>2/29/16 |

| A1005 | Continued From page 135<br><br>This Standard is not met as evidenced by:<br>Based on interview and record review, the hospital did not ensure the integrity of the post-anesthesia evaluation for one patient, Patient 502, creating the risk of a substandard anesthetic outcome for that patient.<br>Findings:<br>During a tour of the PACU on 12/14/15 at 1130, with RN 6, she stated that Patient 502 had just arrived in the PACU.<br>Patient 502 was observed in the PACU on 12/14/15 at 1132 and appeared to be unmoving and asleep.<br>Patient 502 ' s medical record was reviewed at 1135. The Critical Care Flowsheet for the patient containing the PACU record was reviewed, and showed that the patient arrived in the PACU at 1129, and that assessments were completed at 1129 and 1135 with the level of consciousness recorded as " 0 " , indicating " not responding " , and the level of physical activity record as " 0 " , indicating " unable to move extremities voluntarily or on command ' , scores of " 1 " for respiration and oxygen saturation, indicating " limited breathing " and " needs oxygen inhalation to maintain oxygen saturation >90% " . The record also contained a post-anesthetic assessment that indicated that the patient had recovered from anesthesia. The pre-printed note included the observations that " Patient ' s mental status is acceptable. " , and " Pain and nausea are adequately controlled " , and " Patient is determined to have stable airway patency and respiratory function including respiratory rate and oxygen saturation. " The note, observed at 1135, was signed by MD7 and timed 1229. The Anesthesia Record also contained a check mark indicating that there were no anesthesia complications. | A1005 | reported monthly to the Quality Council, MEC and Governing Board until sustained compliance is achieved and process control is demonstrated. Ongoing monitoring will occur until the Quality Council determines sustained compliance has occurred, at which time the Council will determine what adjustments to monitoring are necessary for ongoing sustainability (e.g., random samples or inclusion of the issue as an ongoing indicator).<br><br>Persons Responsible:<br>Director of Anesthesia<br>Chief Nursing Officer | |

***Re:*** ***Eastern Connecticut Health Network, Inc.***
***Proposed Asset Purchase by Prospect Medical Holdings, Inc.***
***OHCA Docket Number: 15-32016-486***
***Attorney General Docket Number: 15-486-01***

Dear Mr. Hawes and Mr. Lazarus:

Eastern Connecticut Health Network, Inc. and Prospect Medical Holdings, Inc. (the "***Applicants***") hereby submit the following:

1. Responses to the issues identified in the letter dated February 24, 2016 from the Office of the Attorney General and the Office of Health Care Access (the "***Hearing Notice***").

2. Prefile testimony of the following individuals, each of whom will be present at the hearings scheduled on March 29, 2016 and March 30, 2016 and available for questions:

   For Eastern Connecticut Health Network, Inc.:

   Dennis O'Neill, MD
   Peter J. Karl
   Joy Dorin

For Prospect Medical Holdings, Inc.:

Von Crockett
Mitchell Lew, MD
Jonathan Spees
Steven Aleman

As requested, the prefile testimony addresses the topics identified in the Hearing Notice. For ease of reference, please find below a chart that shows which speaker's testimony addresses each of the topics you listed:

| Topic | Prefile Testimony |
|---|---|
| 1. The clear and public need for and community benefits of the proposal. | All, but particularly the testimony of Peter Karl and Mitchell Lew, MD |
| 2. How access to care will be maintained in the service area following the asset purchase of the two ECHN hospitals (MMH and RGH) by PMH. | All, but particularly the testimony of Peter Karl and Mitchell Lew, MD; see also the testimony of Jonathan Spees regarding the commitment of PMH to provide charity care. |
| 3. PMH's management of Quality Assurance and Performance Improvement (QAPI) across its hospital network and, in particular, the manner in which oversight of the QAPI program will be managed by MMH and RGH. | Testimony of Von Crockett |
| 4. The financial feasibility of the proposal. | Testimony of Jonathan Spees |
| 5. How prices for, and the cost of, health services at MMH and RGH will be affected by PMH's acquisition of those facilities. | Testimony of Mitchell Lew, MD and Jonathan Spees |
| 6. The charity care policies to be implemented at MMH and RGH following the transfer of ownership and how they compare to PMH's current charity care policies. | Testimony of Jonathan Spees |
| 7. The commitment PMH is willing to make to performing future health needs assessments for the communities in ECHN's service area in a manner that allows for widespread public input, collaboration with other health care providers in the community as well as public dissemination of the assessments and MMH's and RGH's implementation plan to address identified needs. | Testimony of Von Crockett |

| Topic | Prefile Testimony |
|---|---|
| 8. How PMH's experience with license consolidation (i.e., combining separately licensed hospitals into a single licensed hospital with separate campuses) in the other markets in which it operates might impact the future of MMH and RGH. | Testimony of Von Crockett |

At your request, one (1) hard copy and one (1) electronic copy of this submission have been provided to each Office.

If you have any questions or need anything further, please feel free to contact Rebecca Matthews at (203) 498-4502 or Melinda Agsten at (203) 498-4326. Thank you for your assistance in this matter.

Eastern Connecticut Health Network, Inc. and Prospect Medical Holdings, Inc. (the "***Applicants***") hereby submit the following:

1. Responses to the issues identified in the letter dated February 24, 2016 from the Office of the Attorney General and the Office of Health Care Access (the "***Hearing Notice***").

2. Prefile testimony of the following individuals, each of whom will be present at the hearings scheduled on March 29, 2016 and March 30, 2016 and available for questions:

   For Eastern Connecticut Health Network, Inc.:

   Dennis O'Neill, MD
   Peter J. Karl
   Joy Dorin

For Prospect Medical Holdings, Inc.:

Von Crockett
Mitchell Lew, MD
Jonathan Spees
Steven Aleman

As requested, the prefile testimony addresses the topics identified in the Hearing Notice. For ease of reference, please find below a chart that shows which speaker's testimony addresses each of the topics you listed:

| Topic | Prefile Testimony |
|---|---|
| 1. The clear and public need for and community benefits of the proposal. | All, but particularly the testimony of Peter Karl and Mitchell Lew, MD |
| 2. How access to care will be maintained in the service area following the asset purchase of the two ECHN hospitals (MMH and RGH) by PMH. | All, but particularly the testimony of Peter Karl and Mitchell Lew, MD; see also the testimony of Jonathan Spees regarding the commitment of PMH to provide charity care. |
| 3. PMH's management of Quality Assurance and Performance Improvement (QAPI) across its hospital network and, in particular, the manner in which oversight of the QAPI program will be managed by MMH and RGH. | Testimony of Von Crockett |
| 4. The financial feasibility of the proposal. | Testimony of Jonathan Spees |
| 5. How prices for, and the cost of, health services at MMH and RGH will be affected by PMH's acquisition of those facilities. | Testimony of Mitchell Lew, MD and Jonathan Spees |
| 6. The charity care policies to be implemented at MMH and RGH following the transfer of ownership and how they compare to PMH's current charity care policies. | Testimony of Jonathan Spees |
| 7. The commitment PMH is willing to make to performing future health needs assessments for the communities in ECHN's service area in a manner that allows for widespread public input, collaboration with other health care providers in the community as well as public dissemination of the assessments and MMH's and RGH's implementation plan to address identified needs. | Testimony of Von Crockett |

| Topic | Prefile Testimony |
|---|---|
| 8. How PMH's experience with license consolidation (i.e., combining separately licensed hospitals into a single licensed hospital with separate campuses) in the other markets in which it operates might impact the future of MMH and RGH. | Testimony of Von Crockett |

At your request, one (1) hard copy and one (1) electronic copy of this submission have been provided to each Office.

If you have any questions or need anything further, please feel free to contact Rebecca Matthews at (203) 498-4502 or Melinda Agsten at (203) 498-4326. Thank you for your assistance in this matter.

February 22, 2016

Ladies and Gentlemen,

I appear before you tonight to share my thoughts and insights on the proposed merger of ECHN with Prospect Medical Holdings. I am a retired physician, a urologist, who has practiced in the Vernon/Manchester community for 37 years, from 1975 through 2012, while on the active medical staffs of Rockville General Hospital, Manchester Memorial Hospital and ultimately at ECHN. During that time I had the privilege to serve terms as Chief of Urology at each hospital, President of the combined medical staffs and a hospital board member. In my retirement I proudly continue as an ECHN Corporator. I take this position quite seriously since, as a resident of South Windsor, my wife and I continue to receive a substantial portion of our continuing medical care at ECHN facilities just as we had when I was in practice. It is important to us that medical services at ECHN remain readily accessible, comprehensive and of the highest quality.

I am well acquainted with the challenges facing health care today, both nationally and at this local level. 20 years ago, before the advent of ECHN, when we first became acutely aware of the profound financial limitations impacting both Manchester and Rockville Hospitals, I served on a select hospital committee to explore our options. We realized we couldn't go it alone without initiating significant cost savings and more efficient measures in order to preserve the level of care our communities expected from us. To this end, with very capable leadership and much due diligence, we formed ECHN.

This action sufficed for many years, but as we all know, the financial burdens brought about by increasingly more expensive technology, progressive limitations on private and government reimbursement, and the burgeoning demand for health care services has again created a nation-wide crisis. In order to meet this reality, we can all agree that if there was a bottomless pool of money to pay for this demand we might continue to practice as we have been with individual, lavishly staffed hospitals providing all manner of specialty services with the latest instrumentation and technology. We know this is no longer possible. Our hospitals need access to capital to stay current, staffing needs to be optimal but realistic, and the pattern of practice needs to encourage the best outcomes for our population, not the most outcomes.

To achieve both access to capital and the implementation of a well-managed, cost efficient delivery system requires a new model that builds on our existing strengths. ECHN is recognized as a lower cost hospital network with excellent professional staff. When integrated into a well-managed, risk based system which incentivizes and equips our quality providers to produce the best outcomes for wellness and disease prevention along with effective chronic disease management, then both lower costs and optimal care are well served. The alternative of affiliating with a regional network that, by its very nature and interest, must funnel patients

into large, expensive downtown hospitals makes little sense. Such changes neither serve the current economic imperative or our local need for ready access to quality care.

For us, in this ECHN service area, our goal should be to maintain a broad range of quality medical services that emphasize coordinated care in a cost efficient environment. Anything less short changes us on access to care, misdirects an emphasis on preventative and wellness services, and diminishes the full range of quality care we expect within our community. Neither the State nor regional competitors can create the proper mix of changes that preserve all these goals. Prospect has access to needed financial resources as well as the proven data driven, management model to deliver the correct health care product for these ever changing times.

Thank you for your attention.

Respectfully submitted,

Robert D. Rodner

The Honorable George C. Jepsen, Attorney General
Office of the Attorney General
55 Elm Street, Hartford, CT 06106

The Honorable Raul Pino, Commissioner
Department of Public Health
Office of Health Care Access
410 Capitol Avenue, Hartford, CT 06134

Dear Attorney General Jepsen and Commissioner Pino:

As the Chair and Senior Medical Director of the Department of Emergency Medicine and the Service Line Director for Emergency Services at ECHN, I would like to express my excitement about the future acquisition of ECHN by Prospect Medical Holdings (PMH). For the past several years we have been facing one financial challenge after the next in the form of hospital taxes, sequestration, Medicare reimbursement cuts, pension reform, or unfunded quality reporting mandates. The only way we have been able to meet these challenges has been to "do more with less".

My view on Healthcare is that we are facing the same struggles now that the smaller department stores and hardware stores faced a decade or more ago with the emergence of Walmart and Home Depot. Their ability to purchase goods in such large quantities made it impossible to compete with their prices, and many of the mom and pop stores eventually went out of business. This is the path that I believe ECHN would be on if we didn't proceed with this acquisition.

I, as a healthcare provider, and ECHN as a healthcare system, have an obligation to the patients we serve. Our obligation is to be there for them in their time of need and to provide the expertise, staff, and equipment necessary to diagnose and treat them at any hour of the day or night. The acquisition of ECHN by a larger system is the only option that would allow us to continue our mission of "improving your well-being by providing high-quality, compassionate healthcare." Without the ability to join a larger system, our costs will be higher than our competitors, our ability to recruit skilled physicians and

nurses will become more difficult, and we would eventually find ourselves out of business.

I have been asked many times, "Why partner with PMH, rather than with one of the other large systems closer to Manchester and Rockville?" My desire for PMH is based on my belief that they would be the best option for both the patients we serve and for the staff we employ. In order to succeed, PMH has to help grow our system to allow us to directly compete with our local competitors. I feel that if we had chosen to partner with a nearby competitor, we would become victim to consolidations of services and locations. This would directly impact access to healthcare for our patients in our communities.

In my 15 years at ECHN, I have watched our competitors advertise their cutting edge therapies during the prime time news and open healthcare centers in our own neighborhood. I've read about their latest minimally invasive cardiac procedures and have heard on the radio about their world-class stroke therapies. It would be really nice to have the access to capital funding that would allow us to advertise the cutting-edge programs we have here at ECHN. However, the ability to grow and advertise these types of services is becoming virtually impossible under the financial constraints we are facing. With the implementation of the Affordable Care Act, the increase in Medicaid volume, and the State's tax on hospitals, remaining independent is futile and no longer an option. A partnership with PMH will afford us access to the clinical expertise our patients need, as well as access to the desperately needed capital funding so that we can resume investing in our technology, staff, and infrastructure. This partnership will position ECHN competitively for the foreseeable future of healthcare.

Sincerely,

R. Carroll MD

Office of the Attorney General
55 Elm Street, PO Box 120
Hartford, CT 06141-0120
Attention: Deputy Attorney General Perry Zinn-Rowthorn

Office of Health Care Access, Dept. of Public Health
410 Capitol Avenue
Hartford, CT 06134
Attention: Deputy Commissioner Brancifort

Dear Messrs. Zinn-Rowthorn and Brancifort:

It is my understanding that the Office of the Attorney General and the Office of Health Care Access will hold public hearings March 15th and 16th on the Certificate of Need ("CON") application of Eastern Connecticut Health Care, Inc.("ECHN") relating to its intended partnership with Prospect Medical Holdings, Inc. ("Prospect"). I regret that I will be unable to attend the hearings. In my absence, however, I submit this letter to strongly support and recommend approval of the CON and the proposed partnership between ECHN and Prospect.

I have lived in the Manchester and Glastonbury communities my entire life. I was on the Board of Manchester Memorial Hospital ("MMH") and on its ad hoc committee that recommended the merger between MMH and Rockville General Hospital, a merger that made both institutions stronger.

Since that time, in response to the health-care needs of East of the River communities, ECHN has set high standards for quality of care, innovation, and accessibility. While it has always been a challenge to maintain top health care, ECHN has succeeded. To sustain the delivery of high-quality health care, ECHN must operate with reasonable financial returns in order to reinvest in its facilities, keep up with technological advances, and continue to attract highly qualified clinicians and staff. Unfortunately, due to severe economic constraints attributable to numerous factors, the existing business model is no longer sustainable.

Several years ago, ECHN recognized this economic reality and embarked on a process to find the best health-care provider partner. That partner must be dedicated to maintaining the highest standards of health care and also be able to meet the financial needs that those high standards require. In Prospect, ECHN has found such a partner. This conclusion has been reached by ECHN after substantial due diligence and after overwhelming support from ECHN's board, its incorporators, administration, medical staff, and employees.

I know that ECHN's partnership with Prospect will enable the communities that ECHN serves to continue to have accessibility to the highest quality of health care.

Accordingly, I respectfully request that the CON be approved.

Thank you for your consideration of my recommendation.

Very truly yours,

Laurence P. Rubinow

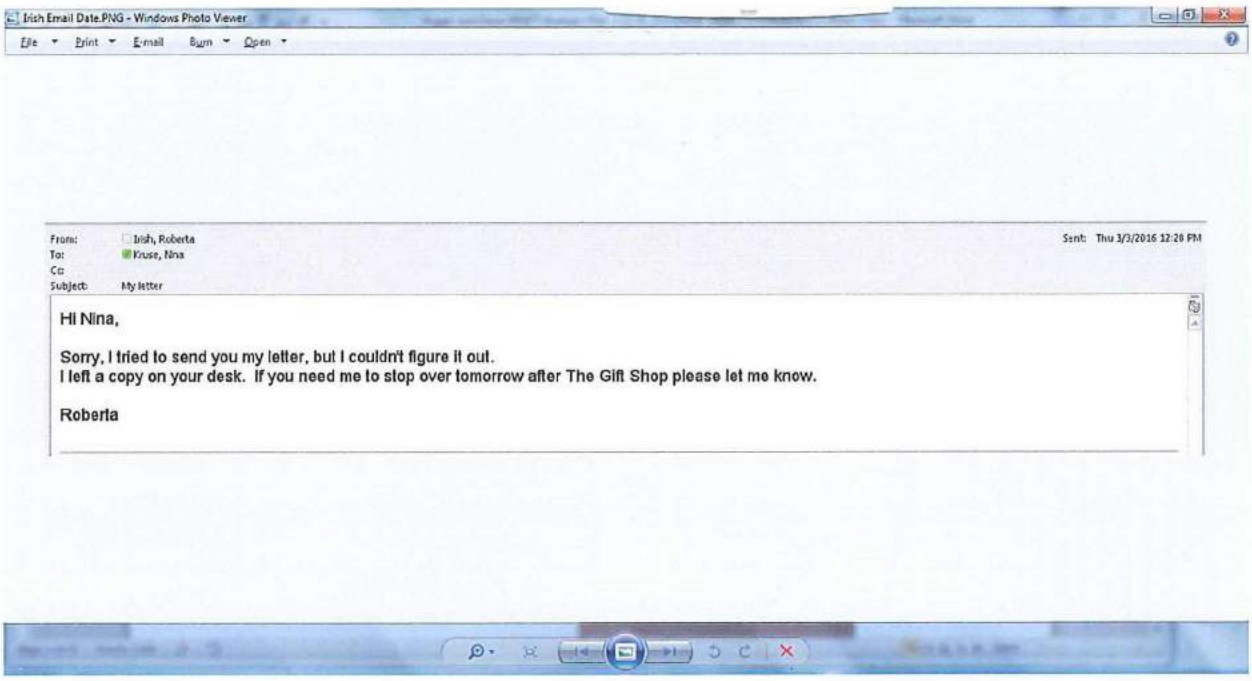
The Honorable Raul Pino, Commissioner
Department of Public Health
Office of Health Care Access
410 Capitol Avenue, Hartford, CT 06134



Dear Attorney General Jepsen and Commissioner Pino,

As the President of The Manchester Memorial Hospital Auxiliary, I appreciate the value of a community hospital. Our organization has been active for the last 93 years providing volunteers and fundraising. With our Gift Shop and Thrift Shop, we have raised millions of dollars to support the needs of our hospital, and now we realize things must change to continue to make our hospital as strong as it can be.

I think for ECHN to stay healthy, it must partner with a larger entity so that it can remain a community hospital. Quality care at Manchester Hospital is important to our residents and I don't ever want to see it go away.

We look forward to continuing volunteer opportunities, whatever they may be, in the future. Somewhere there will be a place for our Auxiliary where we can continue to make a difference.

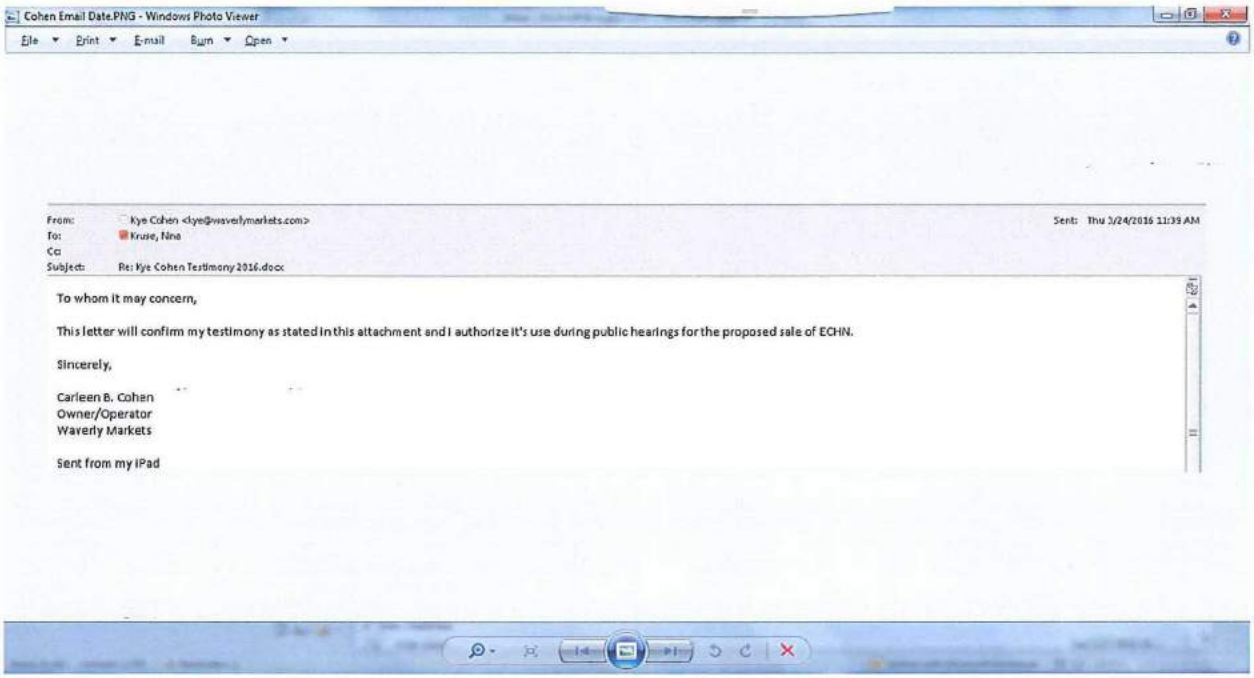
The Honorable Raul Pino, Commissioner
Department of Public Health
Office of Health Care Access
410 Capitol Avenue, Hartford, CT 06134

Dear Attorney General Jepsen and Commissioner Pino,

As a Corporator of ECHN, I have always been extremely impressed with the vision, intellect and communication skills of Peter Karl and Dennis O'Neill. I am comfortable with their decisions regarding the ECHN acquisition by Prospect Medical Holdings and it's my hope that the company becomes more viable and successful as a result.



As a business owner, I am keenly aware of the need for "economies of scale". My organization's ability to partner with a larger entity allows us to stay in business, pass immense savings onto our customers and be philanthropic to the greater Manchester community.

The common thread that exists between ECHN and my business is that we both face a highly competitive marketplace.

I truly understand the need for ECHN to adapt to a rapidly changing healthcare environment and fully support the merger so that we may go forward and keep quality healthcare in greater Manchester.

Respectfully submitted,

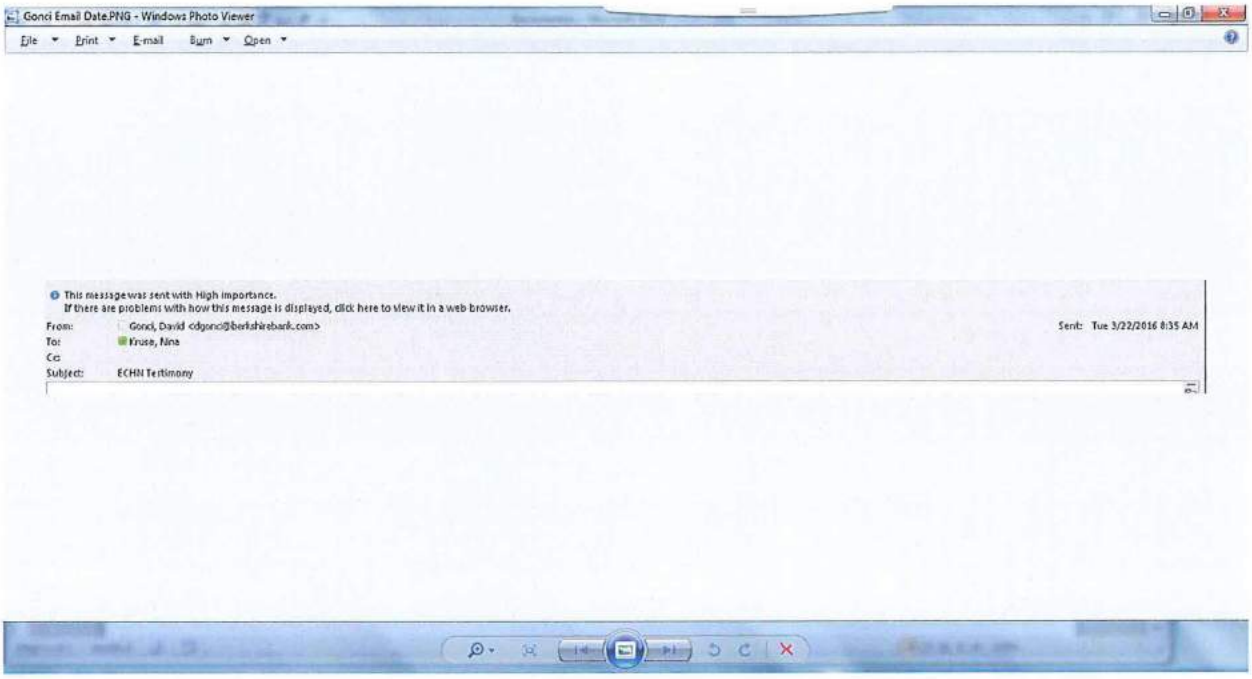
March 22, 2016

The Honorable George C. Jepsen, Attorney General
Office of the Attorney General
55 Elm Street, Hartford, CT 06106

The Honorable Raul Pino, Commissioner
Department of Public Health
Office of Health Care Access
410 Capitol Avenue, Hartford, CT 06134

Dear Attorney General Jepsen and Commissioner Pino,

I am writing to strongly recommend the proposed acquisition of Eastern Connecticut Health Network by Prospect Medical Holdings. I and my family have lived in the ECHN service area for decades and have received both routine and critical care at its facilities. I am a Trustee of ECHN, having served for more than a decade first as a Corporator and then as a Trustee. I chair the Audit and Corporate Compliance Committee and also serve as Vice Chair of the Finance Committee and as a member of the Transaction Committee which worked with management to develop this proposed transaction, which has the unanimous support of our Board.



ECHN has demonstrated the compelling need to combine our operations with a larger system due to the sweeping changes in the healthcare environment. The majority of Connecticut community hospitals have arrived at a similar conclusion. The need for a combination has been made more urgent by the State's hospital tax, as well as the reduction and withholding of State payments to Connecticut hospitals.

ECHN has spent several years assessing and developing partnership options. The proposed Prospect transaction follows an early proposed transaction with Tenet Healthcare, which was withdrawn by Tenet following the imposition of burdensome approval conditions. We are convinced that the combination with Prospect provides the best opportunity available to sustain healthcare services in our communities, while meeting important quality and affordability objectives. ECHN cannot sustain its current service delivery in its current form of organization, and the pressures are mounting to complete this process as proposed, and without burdensome conditions that would make the combination unworkable.

Thank you for your prompt consideration of our proposal to implement the needed changes in order to support our communities.

Tolland, CT 06084

Tuesday, March 22, 2016
The Honorable George C. Jepsen, Attorney General
Office of the Attorney General
55 Elm Street, Hartford, CT 06106

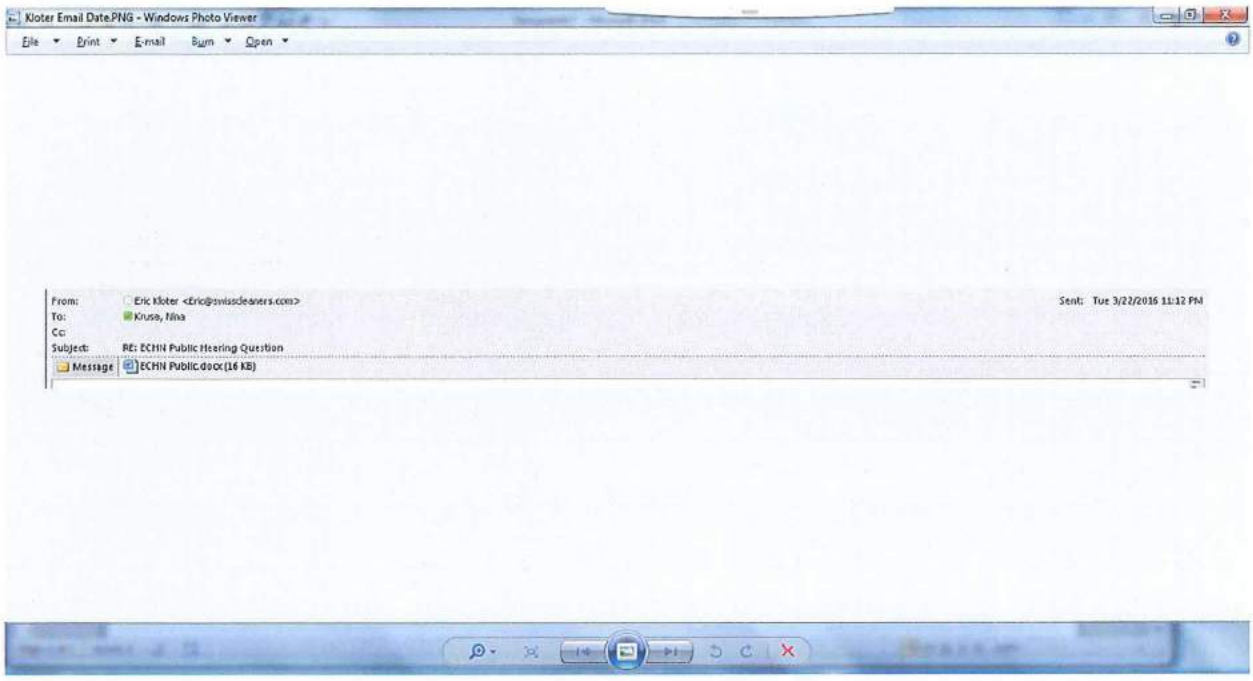
The Honorable Raul Pino, Commissioner
Department of Public Health
Office of Health Care Access
410 Capitol Avenue, Hartford, CT 06134

Dear Attorney General Jepsen and Commissioner Pino,

The honor and privilege has been mine to serve on the ECHN Board of Trustees and numerous other ECHN committees including chairing both the Eldercare (Woodlake of Tolland) and VNHSC (Visiting Nurse and Health Services of CT) Boards of Trustees.

One of those "other" ECHN responsibilities has been to serve on the Transaction Committee which has reviewed all aspects of the ECHN – Prospect Medical Holdings, Inc (PMH) acquisition. The complexity and depth of this endeavor has been challenging, forced by the changing landscape of the medical field. For any industry, it is difficult to reduce cost as revenue sources shrink while preserving the highest level of quality and patient satisfaction possible is not a sustainable model. ECHN cannot survive without the benefit of scale and a new focus on program development.

This acquisition process has revealed to me without any doubt that the future of small community hospitals is short – especially in Connecticut. We have chosen Prospect Medical Holdings to acquire ECHN – based on:



- our visits to PMH facilities and subsequent measures of due diligence in reviewing their practices
- PMH's achievements of high quality which are validated by their measurements and metrics
- the unique PMH vision to empower primary care physicians and oversee patient's as they navigate through a journey to sustain or regain health which leads to better patient outcomes
- implementation and extensive use of electronic medical records to help reduce duplication and cost
- a deep study of how PMH supports local culture and leadership
- and then . . . the resulting level of trust and confidence in PMH leadership and their program for managing population health.

The administrative team that leads PMH is actively committed to a vision that will change the way future healthcare is delivered. ECHN, its staff, and the physicians that serve our local communities have studied the

PMH business plan – Coordinated Regional Care (CRC) – and are eager to engage this new culture that will enhance ECHN's healthcare delivery in our local communities.

Having had the privilege of working closely with the PMH transaction team, I am convinced and confident of ECHN's ability to deliver the finest healthcare under PMH's guidance and with the benefits of PMH's scale and best practices. PMH's leadership has delivered on their commitments and promises. The PMH hospitals successes in California, Texas and Rhode Island further confirms to me that the ECHN Board of Trustees has made the right decision to be acquired by Prospect Medical Holdings and we look forward to integrating our mission, vision and values for healthcare in our region that will benefit our neighbors, family and friends across eastern Connecticut.

Sincerely,
Eric L. Kloter

**Letter of support for the partnership between Eastern Connecticut Health Network and Prospect Medical Holdings Inc.**

To: Office of Healthcare Access and the State Attorney General

From: M. Saud Anwar MD, MPH, FCCP
Partner Northeastern Pulmonary Associates, LLC,
Chairman of Department of Medicine, Eastern Connecticut Healthcare Network.

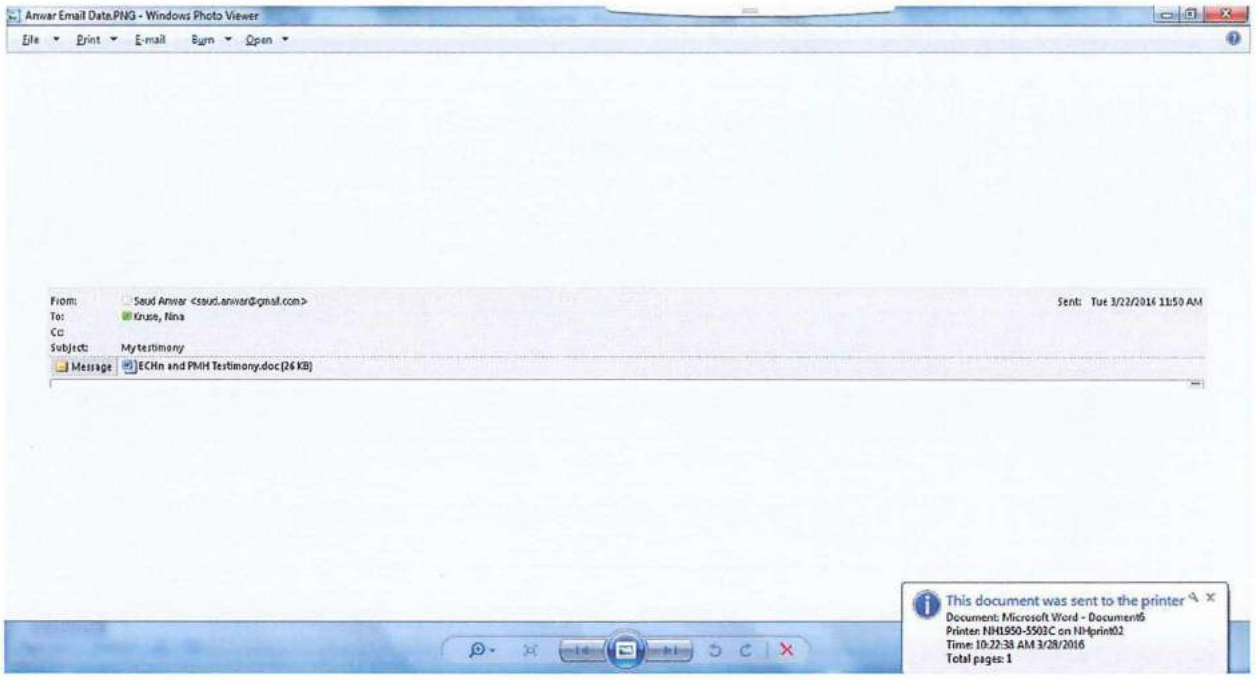
RE: Certificate of Need, Application for Hospital Conversion to "For Profit" Status.

Dear Commissioner of the Office of Healthcare Access and State of Connecticut Attorney General Mr. Jepsen,

My name is Saud Anwar, I am a Pulmonary and Critical Care physician affiliated with Eastern Connecticut Health Network for over 17 years. I support the proposed partnership of Eastern Connecticut Health Network and Prospect Medical Holdings. I am an independent physician who has the opportunity to interact not only with the patients in the community, but also the staff essentially in most parts of our hospital and I also have an opportunity to cooperate with the community physicians providing primary care to our community. As a medical director of the Clinically Integrated Network of Eastern Connecticut and also with the Eastern Connecticut Physician Hospital Organization and medical advisor to the care management department of the hospital, I have had the opportunity to closely observe the sustainability challenges our healthcare system has who are struggling to continue to provide best quality to all the patients with ongoing challenges with increasing social challenges and insurance reimbursement and bureaucracy.

I have also had the opportunity to learn first hand from the representatives of the Prospect Medical Holdings and their existing hospitals and their track record of providing quality care to patients with all capabilities of payments. It is quite clear to the physicians that integrated network and coordination of care in a healthcare system with strong primary care delivery along with collaborative specialty care with appropriate transitions according to the patients' needs is the best and the most effective way of maintaining and managing population health. Prospect Medical Holdings has many years of experience and success in managing risks with their delivery models. The size of our healthcare system and the opportunity to collaborate with an experienced partner who believes in collaboration between the independent physician in the community and the hospital will truly strengthen healthcare within our network.

Our hospital continues to employ members in the community and serves as a backbone of the economic engine within our towns. In my other role as a Mayor of the Town of South Windsor, I know that over 250 people in my community are employed by ECHN. Stronger, efficient and sustainable healthcare system allows industry to identify and



choose communities to invest in. With the growth of population health management, we truly can have an impact at all levels according to the needs of the people.

I strongly feel that the track record and the current system needs to move to "for-profit" model and this partnership will not compromise the quality of care, but actually enhance the quality of care and would be able to provide care to the patients irrespective of their insurance status and abilities to pay.

I thank you for your consideration. Should you have any questions, please do not hesitate to contact me.

Sincerely,

M. Saud Anwar, M.D.
Chairman of Department of Medicine,
Eastern Connecticut Health Network

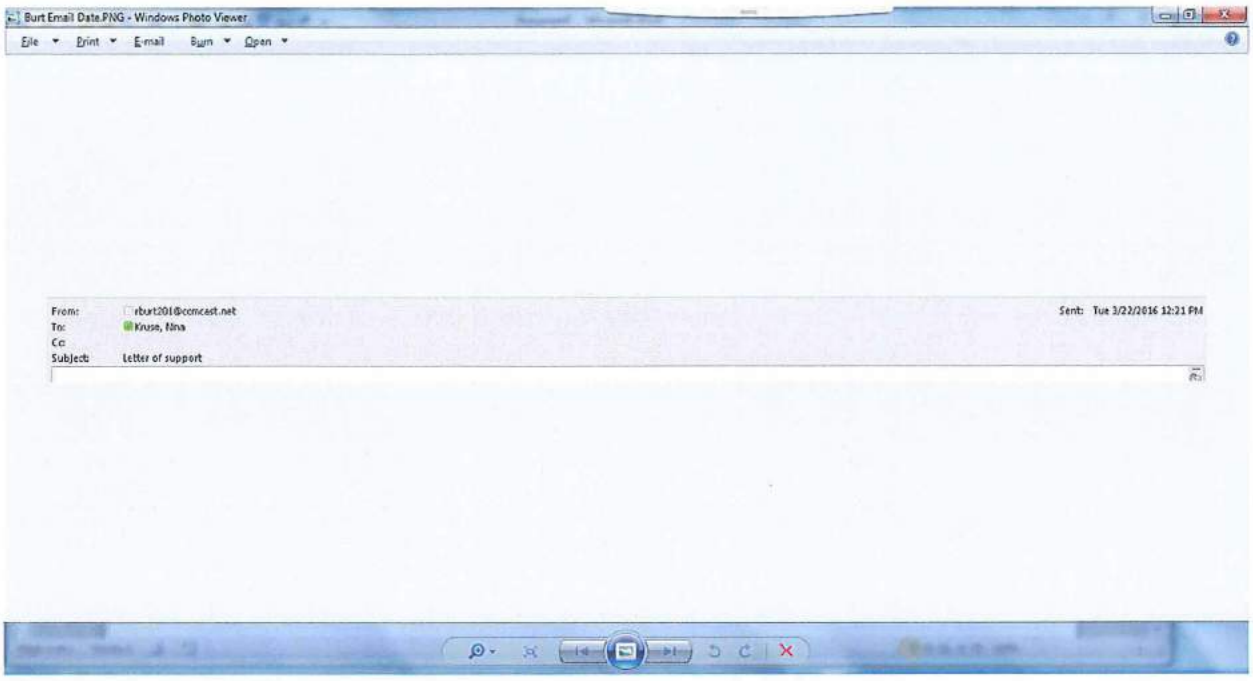
March 22, 2016

The Honorable George C. Jepsen, Attorney General
Office of the Attorney General
55 Elm Street, Hartford, CT 06106

The Honorable Raul Pino, Commissioner
Department of Public Health
Office of Health Care Access
410 Capitol Avenue, Hartford, CT 06134

Dear Attorney General Jepsen and Commissioner Pino,



I would like to submit the following statement of my support for the proposed sales transaction of ECHN to Prospect Medical Holdings, for entry into the public record.

As a Connecticut physician practicing in Hartford and Tolland Counties for 30 years, I have been witness to, and very much involved in the evolution of all aspects of delivery of health care in central and eastern Connecticut, very much including those specifically relating to the ECHN organization. ECHN is a critical institution to the continued delivery of health care to the communities it serves. Challenges have never been as daunting as they are now, but the trustees and management of the organization have never been so fully dedicated to the preservation of ECHN's service to their community as they have been over the last several years. In this time, the necessity of all hospitals becoming parts of larger systems has been well recognized by all as the only organizational approach to both surviving, and even thriving, in the new paradigms of health care delivery. I strongly believe that ECHN, with the right corporate partner, has all the elements necessary to move forward successfully and durably. Tremendous expenditures of time, personal, and institutional commitment have been devoted by ECHN and its many supporters to identify the best organization within which to grow, and to negotiate the best possible terms under which to join such an organization. That extended and extraordinarily diligent process has brought ECHN to its current position of proposed acquisition by Prospect Medical Holdings. Prospect has already demonstrated its ability to assist hospitals in Southern New England to traverse the increasingly difficult regulatory and fiscally constrained environments within which health care is delivered in this region, and is extraordinarily well prepared to extend that record of success in furthering the availability and quality of health care services within the ECHN service area. Prospect has not simply been reactive in its responses to the new and continually changing realties of health care delivery, but has been proactive: anticipating, preparing for, and developing successful models of implementation of systems to respond to the need for population health management, cost containment, quality improvement, and successful operation within new models for reimbursement for services.

For all the above reasons, I very strongly support the proposed ECHN/Prospect Medical Holdings transaction and respectfully ask that the ECHN public community and involved Connecticut regulatory bodies support and approve the process.

Respectfully submitted,

Ronald E. Burt, M.D.

ECHN
Eastern Connecticut Health Network, Inc.
Department of Medical Affairs
860-647-6866

February 22, 2016

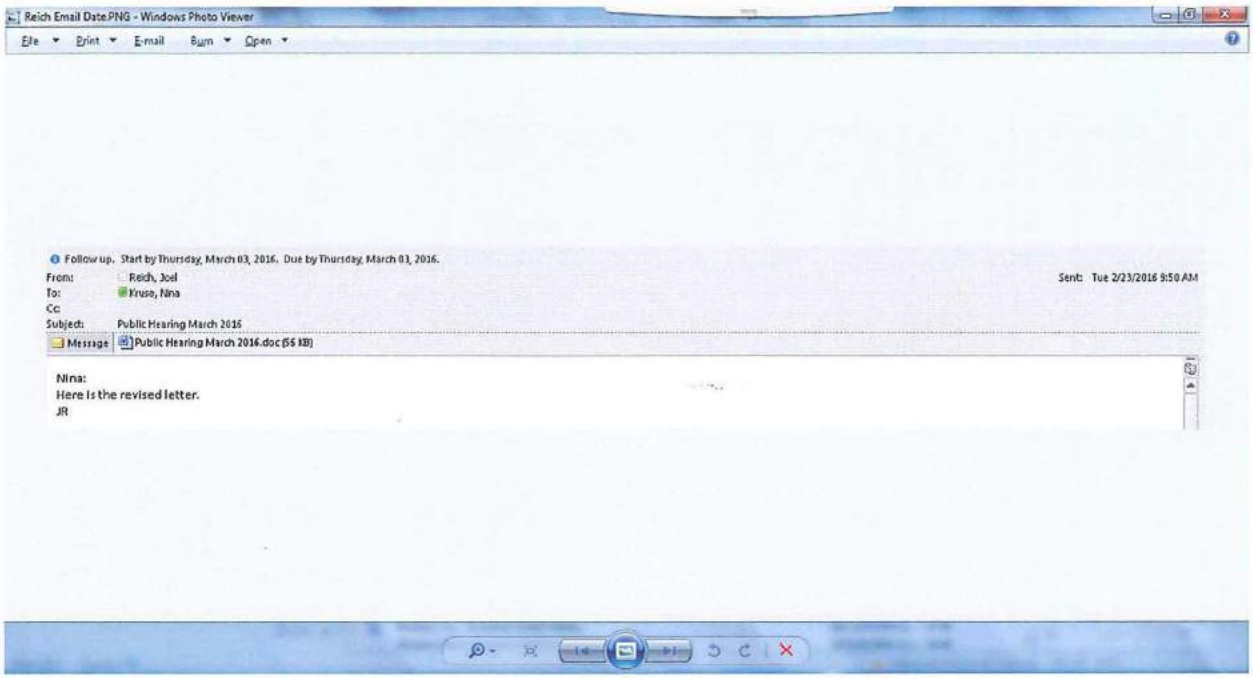
The Honorable George C. Jepsen, Attorney General
Office of the Attorney General
55 Elm Street, Hartford, CT 06106

The Honorable Raul Pino, Commissioner
Department of Public Health
Office of Health Care Access
410 Capitol Avenue, Hartford, CT 06134

Dear Attorney General Jepsen and Commissioner Pino:
I am writing this letter to express my total support for Prospect Medical Holdings acquisition of Eastern Connecticut Health Network. I have lived in this community and have been with ECHN for 32 years as a practicing emergency physician, Chair of Emergency & Ambulatory Care, Medical Director of EMS, and currently as Chief Medical Officer. These roles have enabled me to attain a deep understanding of our community's needs and how our health system can best continue to provide excellent care and improve the health of the residents of the towns we serve.

Clinical advances, maturation of health information technology, increasing economic pressures, and policy and legislative initiatives including the Affordable Care Act have driven unprecedented change in the healthcare system during the past 5 years. What worked before, no longer works today, and certainly won't work in the future.

ECHN has completed a carefully planned due diligence process to determine what best meets our future needs and those of the communities we serve. I was part of the team that visited Prospect Medical Holdings' health systems in Los Angeles, CA and Providence, RI. While health systems address their local needs, we found several things in common: (1) substantial capital investment, (2) significant growth of clinical services, (3) effective population health/community care management programs, and (4) highly satisfied community physicians. It is rare to see *any one* of these, and almost unheard of to see all in one place. Prospect Medical Holdings has applied its extensive experience in health system leadership & management, care coordination, independent physician association alignment, and value-based purchasing contracting to advance high quality patient care, while thoughtfully managing cost.



Prospect Medical Holdings is by far the best option for ECHN for the following reasons:

- It is the best "cultural fit". It has extensive experience with community hospitals serving communities very much like our own. Its leadership is focused on innovation and growth and its strategy execution is agile.
- It will bring much-needed capital investment to ECHN to ensure financial stability and future growth.
- Prospect Medical Holdings is much more than a "hospital company". It is healthcare services company. While it very successfully operates its 13 current hospitals, it has fully integrated 9,000 independent physicians, community health care centers, and other community care givers into its system model which is fully compatible with the Affordable Care Act.
- Through its care management programs, health coaching structure, and sophisticated health information and analytics capabilities, it helps patients and families navigate the complexities of the healthcare system, while reducing expenditures for non-value-added services. In short, Prospect Medical Holdings has already mastered what most other health systems are *talking about* doing in the future.

I believe that Prospect Medical Holdings is the best partner for ECHN and hope that you will be able to support this choice through the regulatory process. Thank you for your consideration of this request.

Sincerely,

Joel J. Reich, MD, FACEP
Chief Medical Officer/Senior Vice President for Medical Affairs

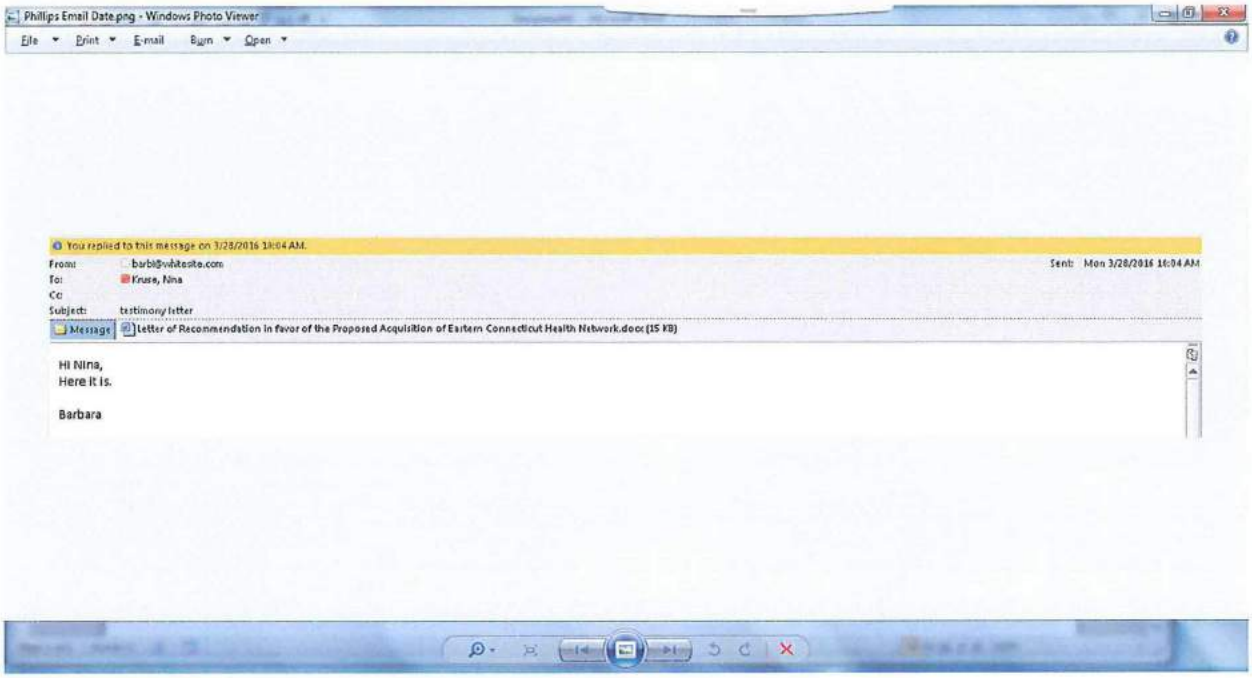
Nina:
Here is the revised letter.
JR

**Letter of Recommendation in favor of the Proposed Acquisition of Eastern Connecticut Health Network, Inc. by Prospect Medical Holdings, Inc., Provided for Public Hearing on March 30, 2016**

**To: The Office of Health Care Access and the State Attorney General**

My name is Barbara L. Phillips, M.D., and I speak today as a family physician and as a member of the Board of Trustees of Eastern Connecticut Health Network, Inc. ("ECHN"), in support of the acquisition of ECHN by Prospect Medical Holdings, Inc. ("Prospect").

I have a great interest in preserving access to quality health care for the citizens of Connecticut. I have practiced independent family medicine in Manchester since 2004. I completed my internship and residency training at Middlesex Hospital here in Connecticut and have served on the Board of Directors for the Connecticut Academy of Family Physicians, all of which has informed my understanding of the healthcare needs of our state. My work in the Eastern Connecticut Physician Hospital Organization and our clinically integrated network have deepened and broadened my connections with communities in the ECHN service area. In helping to represent Connecticut family physicians and the physician hospital organization at the national level, I have tried to bring the voices of Connecticut residents into the dialog regarding health care reform, and to place the healthcare issues of our state in the national context. And now as Trustee for ECHN, through due diligence I have developed confidence in and a strong commitment to the choice of Prospect as the appropriate partner with ECHN to ensure the health of all residents of the ECHN service area.



A number of years ago, the ECHN management team, Board of Trustees and medical staff leaders anticipated the significant challenges posed by the accelerating pace of change in healthcare in Connecticut. ECHN, like a number of community hospitals in the state, determined that aligning with a capital partner offered the best means of preserving and improving access and quality of local health care, and of "bending the cost curve" of medicine.

ECHN, with the Board of Trustees, conducted a thorough search to identify the best partner to support its mission to provide high-quality compassionate health care. Simultaneously, a collaborative organization was developed to better unite the efforts of healthcare providers, health system and community, and transition stakeholders toward inevitable risk-contracting. This organization is the ECHN Clinically Integrated Network of Eastern Connecticut, called "CINECT". The formation and growth of CINECT has allowed us to work cooperatively with our health insurance partners to more effectively manage the health of our population. With proper oversight and alignment of all involved in primary, specialty, acute and post-acute care, the clinical integration model has tremendous potential to achieve the Institute for Healthcare Improvement's Triple Aim -- to improve patient experience of care, improve the health of populations, and reduce the cost of health care.

As the health system's search for a partner progressed, it became and remains abundantly clear that Prospect is the most appropriate acquisition partner for ECHN. Prospect is best poised to build upon the bedrock of ECHN's deep community ties and historical stewardship of regional health care, and to bring their expertise to developing the path of clinical integration and

bettering the delivery of regional health care. In contrast to the fears of some regarding the entry into the state of a for-profit health system, Prospect has consistently demonstrated its commitment to the viability of its locally managed health systems and the promotion of robust primary care-driven physician networks. With its proven Coordinated Regional Care model and solid financial health, Prospect will help ensure that we preserve diversity, choice and access to health care in Connecticut, and I urge the State Attorney General and Office of Health Care Access to approve the acquisition.

Thank you and please feel free to contact me for further information.

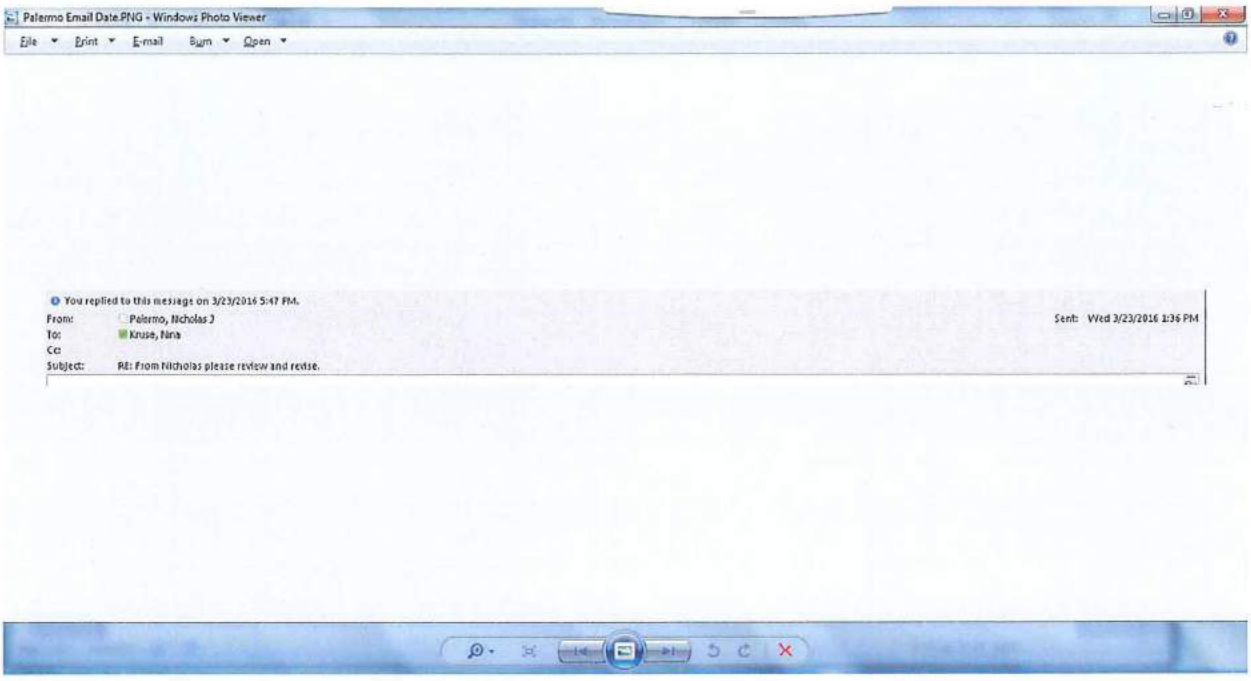
Letter of Recommendation in favor of the Proposed Acquisition of Eastern Connecticut Health Network.docx (15 KB)
Hi Nina,
Here it is.
Barbara

March 22, 2016

The Honorable George C. Jepsen, Attorney General
Office of the Attorney General
55 Elm Street, Hartford, CT 06106

The Honorable Raul Pino, Commissioner
Department of Public Health
Office of Health Care Access
410 Capitol Avenue, Hartford, CT 06134



Dear Attorney General Jepsen and Commissioner Pino,

Over six years ago Manchester Memorial Hospital had a vision of expanding primary care for the communities we serve east of the Connecticut River. We developed a Department of Academic Affairs, and together with our academic partner, the University of New England and the College of Osteopathic Medicine, we developed a medical student program for those students to receive their clinical training at ECHN. This was received so well by the local and hospital community that a decision was made to expand our clinical teaching services by starting a Family Medicine Residency Program. The vision for this project was to continue the continuum of medical education training by developing graduate medical education programs. The benefit to developing our own residency programs is that we train our own physicians who will hopefully love our community as much as we do and stay in the area after they graduate.

The Eastern Connecticut Family Medicine Program graduated its first class of physicians in June of 2015. Chad McDonald, D.O., our Chief Resident at the time, is now practicing in South Windsor, CT. Another graduate, Tricia Hall, D.O., is also practicing in our community as a Neuromuscular Medicine Fellow. Keeping this trend alive, this year another one of our graduating physicians and chief resident, Katelyn Zachau, D.O. will also be establishing her practice in Ellington. The mission to bring primary care providers to our area is working and in the spring of 2017 two more graduates will be opening their offices in the Manchester and South Windsor area as well.

Prospect Medical Holdings, LLC has expressed one hundred percent commitment to both the undergraduate and graduate medical programs at Manchester Memorial Hospital. There are natural synergies between their vision to expand clinical services and our vision to provide those physicians for those projects. In addition, Prospect Medical Holdings, LLC shares our opinion that there is a tremendous value in academic medicine as we look to train our future medical providers today. We are confident that Prospect Medical Holdings, LLC's investment in our ECHN Family will be to strengthen our family medicine residency program as it continues to grow and to provide our primary care physicians with ample opportunities to practice in this wonderful community.

Nicholas J. Palermo, D.O., M.S.
Program Director
Eastern Connecticut Family Medicine Residency Program
Associate Regional Assistant Dean, UNECOM

ECHN℠
Eastern Connecticut Health Network

# The Proposed Transfer of Assets of Eastern Connecticut Health Network, Inc. and Affiliates to Prospect Medical Holdings, Inc.

**Presented to:**
The Office of the Attorney General
The Office of Health Care Access
March 29 & 30, 2016

PROSPECT MEDICAL
Quality Service ~ Quality Care

**Presenters:**
Dr. Dennis O'Neill, Chairman, ECHN Board of Trustees
Joy Dorin, Vice Chairman, ECHN Board of Trustees
Peter J. Karl, President & CEO, ECHN

ECHN℠
Eastern Connecticut Health Network

# Overview: ECHN's Journey, Its Mission

Dennis G. O'Neill, M.D.
Chairman, ECHN Board of Trustees

# Preparing for the Future at ECHN

## *Our Mission : Our Community*

- Caring for & serving the community, continuing our mission & vision
  - Improving the well-being of those we serve with quality, compassionate health care
  - Preserving ECHN: its name, local institutions, services and programs
  - Developing the next generation of physicians to serve our communities
  - Striving to continuously improve quality, safety, & outcomes with recognition by Joint Commission for the services offered
- While preserving over 3,000 jobs

ECHN
Eastern Connecticut Health Network

# Preparing for the Future at ECHN

## *Serving the public need*

- More than our two hospitals, a network of 13 wholly owned companies, 12 joint ventures companies, dozens of facilities serving our communities healthcare needs
- For 2015:
  - 114,000 people treated at its hospitals
  - 60,000 patients under the care of community-based physicians employed by ECHN
  - 4,690 patients cared for by Visiting Nurse and Health Services of CT
  - 805 people received homemaker and companion services
  - Comprehensive behavioral health services
  - 61,000 emergency visits

ECHN℠
Eastern Connecticut Health Network

ECHN℠
Eastern Connecticut Health Network

# Understanding Its Past, Preserving Its Future

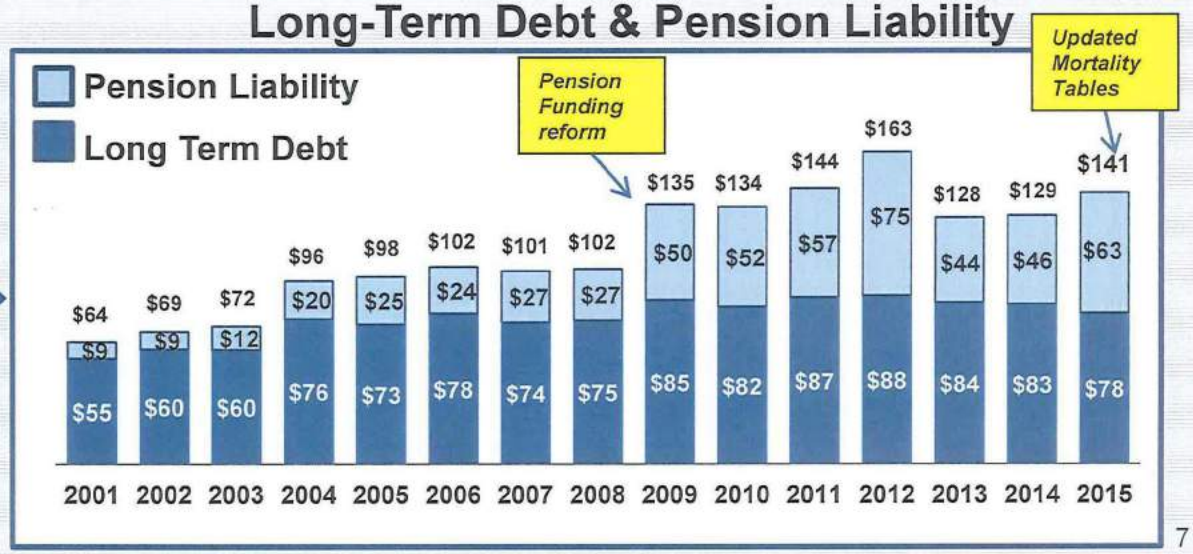
Peter J. Karl
President & CEO

# Impact of Healthcare Reform
## *(PPACA)*

- More than insuring 32M more people
- Declining government payments to hospitals
- Focus on value, lowest cost with best results
- New payment systems put providers at risk
- Community focused delivery models
- Major investments required for programs, technology and facilities

ECHN
Eastern Connecticut Health Network

ECHN
Eastern Connecticut Health Network

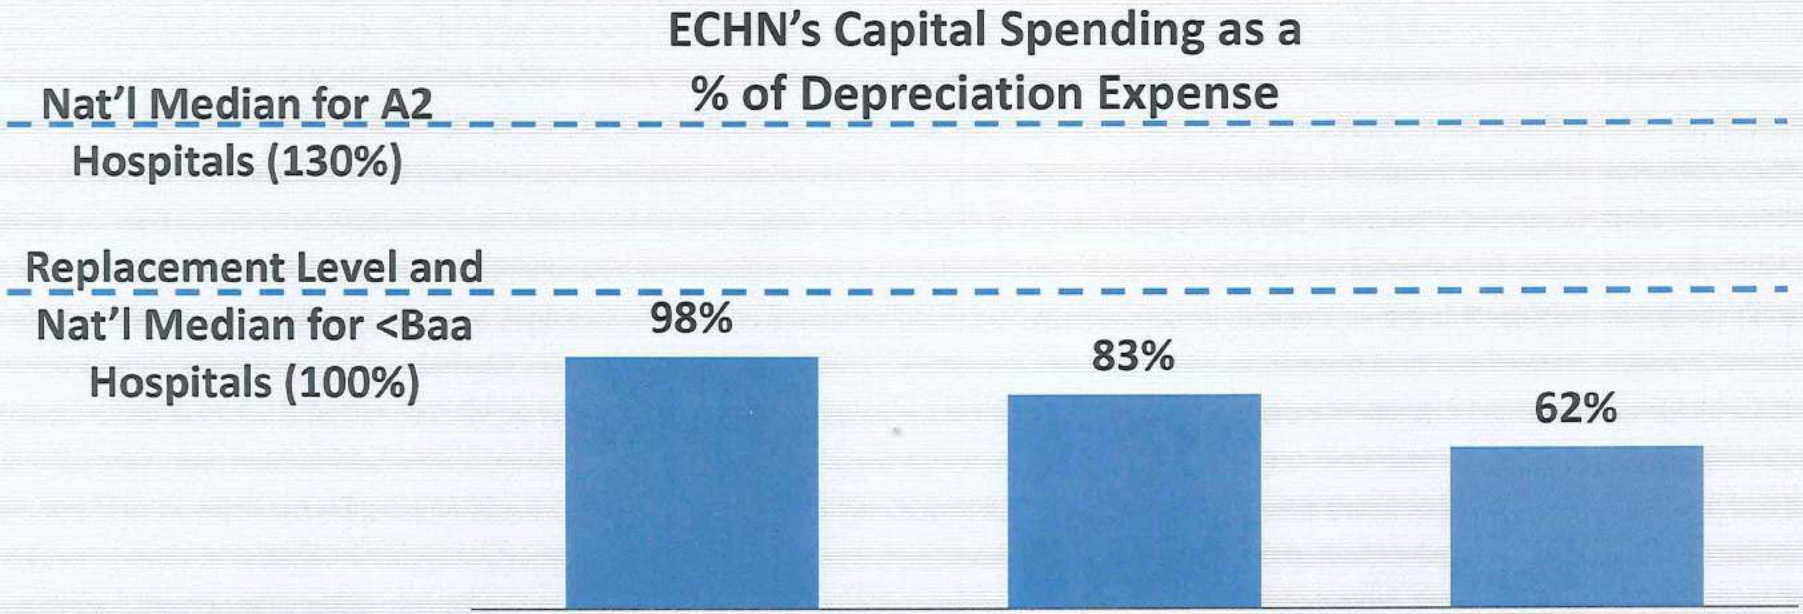


# Financial Challenges

**Low margins and growth in debt forced ECHN to defer capital investments; our historical financial performance has left the organization with a large debt structure that cannot be mitigated through margin alone.**

1. Operations contributed only $9M total over the last 15 years: Operational deficits in 2001-2004 of $23.1 million required 6 years to be overcome

2. Long term debt and pension liabilities have grown 123% ($78M) in the last 15 years– annual debt service and pension contributions now take up the lion's share of annual cash flows



# Continuing Financial Challenges
## Taxes and Reduced Government Payments

| | FY 2014 | FY 2015 | FY 2016 |
|---|---|---|---|
| CT Hospital Tax | (3,914,000) | (7,960,000) | (9,942,000) |
| CMS Sequestration | (1,104,000) | (2,208,000) | (2,208,000) |
| Medicaid Inpatient Modernization Program | | (1,200,000) | (1,600,000) |
| Low Cost Hospital Pool Eliminated | | | (300,000) |
| Medicare Wage Index | | (4,825,000) | (6,525,000) |
| | ($5,018,000) | ($16,193,000) | ($20,575,000) |

ECHN
Eastern Connecticut Health Network

# ECHN's Financial Challenges

Historically, and in the future, ECHN's ability to invest in capital is below replacement for depreciation – inherently leading to a decrease in its asset base. The age of plant for our hospitals in 2015 was 21 years.

| | 2013 | 2014 | 2015 |
|---|---|---|---|
| Plant/Equipment Purchases | $12.1 | $10.1 | $7.4 |
| Depreciation | $12.3 | $12.2 | $11.9 |

# Negative Forces into the Future

***-Continued payment erosion from federal government***

***-Declining levels of payment from state government***

***-Payment reforms with more financial risk***

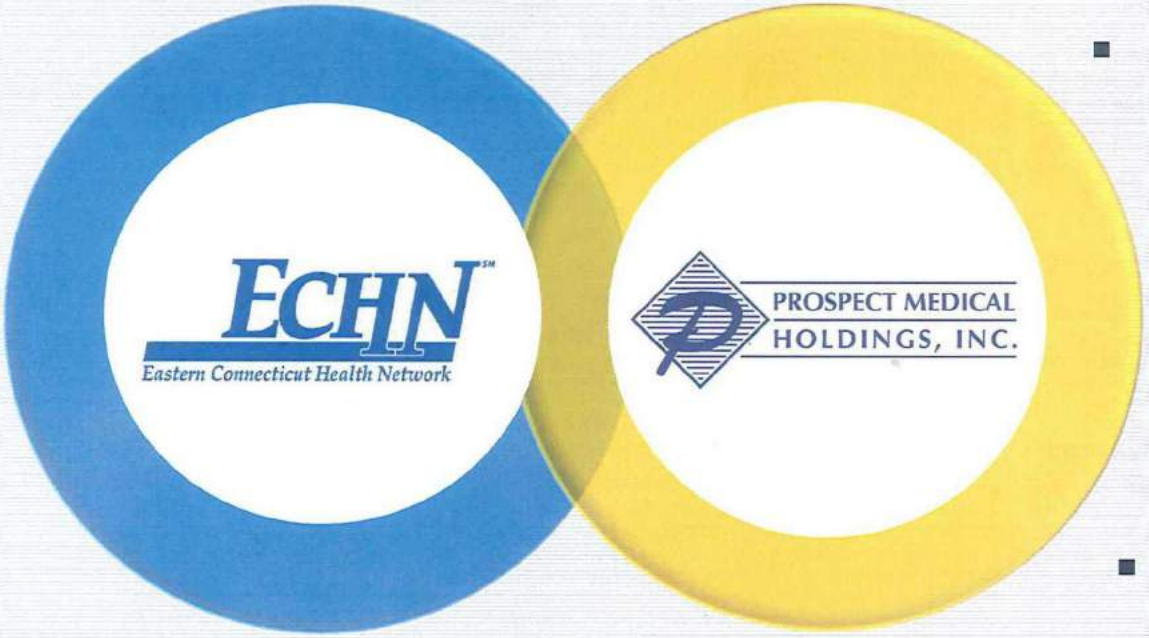
***-Continued pension obligations***

***-Rising costs***

---

***= Unsustainable results with an inability to REINVEST in ECHN***

ECHN
Eastern Connecticut Health Network



# The Proposed Transaction

## *Prospect Medical Holdings to Buy ECHN*

- **$105M** to satisfy all of ECHN's debt and liabilities
- **$75m of capital** to invest in ECHN
- Maintain Manchester Memorial and Rockville General Hospitals, Woodlake at Tolland and Visiting Nurse & Health Services of Connecticut
- Continuation of the ECHN brand and mission
- Community advisory board
- Continued commitment to charity care, indigent care and community benefits
- Employment for all ECHN employees
- Establishment of a community foundation to oversee certain charitable funds

# *The combination of ECHN with Prospect Medical Holdings will secure the future of care and local access for residents*

- Aligned mission, vision & values
- Strong medical staff partner
- Experienced health plan partner with extensive risk management experience
- Long history of population health management
- Resources to invest in programs, staff, facilities and technology

***Together with our Medical Staff, building a sustainable, thriving network of value-based care for our communities.***

ECHN℠
Eastern Connecticut Health Network

# Future Quality Assurance at ECHN

Joy Dorin
Vice Chair, ECHN Board of Trustees
Chair, ECHN Transaction Committee

# Due Diligence for the Transaction

- ✓ Serve the public's needs
- ✓ Positive impact on financial strength of our health care system
- ✓ Improve quality, accessibility and cost-effectiveness of health care delivery in the region, etc.
- ECHN's quality and safety efforts and achievements
  - High Reliability Organization
  - MMH and RGH, Joint Commission recognition Top Performers
- Due diligence efforts and results

## Supplemental Information for Question 11 and Exhibits Q11-1 and 11-2 of the Certificate of Need Related to ECHN's Charitable Funds

Eastern Connecticut Health Network, Inc. is submitting additional information related to Question 11 and Exhibits Q11-1 and 11-2 of the Certificate of Need concerning the charitable funds held by Manchester Memorial Hospital, Rockville General Hospital, ECHN Foundation, and Woodlake at Tolland. References are to Exhibit and Page numbers of the Certificate of Need.

**Fund Number 11-1.1 in Exhibit Q11-2 (page 983) - Dwight W. Blish.** A portion of the first page of the copy of Mr. Blish's Will dated September 6, 1923, was not included in the filing. Complete conformed copies of the Will and Codicil are provided as Attachment A.

**Fund Number 11.1-30 in Exhibit Q11-1 (page 941) - Interests in the Estate of Raymond F. Damato.** As stated in the original submission, Manchester Memorial Hospital is a beneficiary of an unrestricted gift from of the Estate of Raymond F. Damato. The Hospital's vested interest in the Estate has been partially distributed but will likely not be fully distributed to it prior to closing of the contemplated transaction. ECHN has considered the timing and use of the remaining distribution(s). ECHN has been working with the executors of the Estate to develop a plan for use of the gift and now contemplates using the funds to benefit the Manchester community through supporting the continued availability of physicians to serve the community and larger area and furthering medical education. Regardless of whether the remaining gift distributions are received prior to or after the closing, after the payment of all ECHN's debts, ECHN is planning to distribute the gift (or assign the right to receive it) to the University of New England College of Medicine ("UNECOM"), a 501(c)(3) organization that already provides

medical education in Manchester, to support the continued provision of medical education in Manchester, including but not limited to support for the construction and/or purchase of medical education facility space and/or equipment to be located in Manchester, medical education services to be provided within the boundaries of Manchester, and/or financial assistance to medical students and residents receiving their clinical education in Manchester. ECHN also plans to impose gift restrictions to insure that the gift may not be used out of Connecticut. ECHN plans to consult with the Office of the Attorney General in the future about the proposal for use of the gift.

**Fund Number 11.1-34 in Exhibit Q11-1 (Page 943) - Stephen Goodale and Emeret Scott Risley.** In addition to an endowment created under the Will, the testatrix Mary Risley Adams left her father's diploma and a 1720 clock to Rockville General Hospital. The Hospital has the clock, which is in the library of the mansion of the Hospital, and is looking for the diploma. Because these were outright gifts to the Hospital and not subject to a restriction, ECHN believes they are assets required under the APA to be transferred to PMH. If for some reason PMH does not want one or both of them, then ECHN will consider donating them to the library or the historical society.

**Fund 11.1-55 in Exhibit Q11-1 (Page 951) – E. Stevens Henry.** As noted in the Certificate of Need, the Hospital has received differing advice about the nature of this fund, which was received by the Hospital in 2003 upon termination of a trust. The Hospital is now evaluating how it believes the fund should be classified and in addition is investigating what the original gift value is.

**Fund 11-1.66 in Exhibit Q11-1 (Page 959) – Swindells Fund.** This fund contains distributions from a trust held by an outside trustee. Rockville General Hospital is not a named beneficiary of the trust, and the Hospital received its most recent distribution from the trust on October 4, 1996.

**Fund 11-1.96 in Exhibit Q11-1 (Page 971) – ECHN Foundation: $10,000 One Life Charitable Gift Annuity**. The Foundation has decided to ask the annuitant to accept payment of the present value of the right to receive the annuity payments in satisfaction of this agreement.

**Fund 11-1.103 in Exhibit Q11-1 (Page 975) – Trust u/w Gertrude H. Rogers.** The language in this trust reflects that the primary interest of the donor was to serve the health and welfare of the Manchester community. ECHN is considering ways in which this intent may continue to be furthered consistent with the structure of the trust overall.

**Updated Market Values.** ECHN is preparing updated values for the funds and will file them at or immediately after the public hearings.

765/2611/3442765.4

# ATTACHMENT A

## Complete Conformed Copy of the Will of Dwight W. Blish

M M Hospital Dwight W Blish Fund #1402

M M H Dwight W Blish Fund #1401

BE IT KNOWN TO ALL PERSONS, THAT I, Dwight W. Blish of the Town of Manchester in the County of Hartford in the State of Connecticut being of lawful age, of sound and disposing mind, memory and judgment, do hereby make, publish and declare this to be my last Will and Testament, hereby revoking all previous wills and codicils by me made.

First: I direct that all my just debts and funeral expenses be paid by my executor hereinafter named.

Second: I give to the town of Manchester the sum of One Hundred Dollars, in trust however, to invest the same and to use the income therefrom for the perpetual care of my burial plot in the East Cemetery in said Manchester.

Third: I give to my wife Alice E. C. Blish and to my son Hayward C. Blish all my wearing apparel, watches, jewelry, household furnishings, furniture, tools and my automobile.

Fourth: All the rest and residue of my property both real and personal and wheresever situated I give, devise and bequeath to The Manchester Trust Company of said Manchester, in trust however, to take, hold, invest and reinvest the same and to use the income therefrom for the support and maintenance of my said wife and son or the survivor of them. In case the income from said trust fund is not sufficient for the comfortable support and maintenance of my said wife and son then I authorize said trustee to use any or all of the principal for said purpose. I direct said trustee to pay the funeral expenses of my said son from said trust fund and in the event that there should not be funds available for the funeral expenses of my said wife I direct said trustee to also pay her funeral expenses. It being my desire that my said wife and son shall always have a home of their own during their lifetime I hereby direct said trustee upon the written request of my said wife to sell the house occupied by her and my son and to purchase another home for her upon like request. Unless so requested by my said wife the house occupied by her and my son shall not be sold. I authorize and empower said trustee to sell all other real estate owned by me at the time of my death if it shall deem best. At the death of my said

wife and son I give whatever property may then remain in the hands of said trustee to The Manchester Memorial Hospital to be held by the trustees of said hospital as a trust fund to be known as the Dwight W. Blish fund, the income therefrom to be used for such purposes in connection with said hospital as the trustees shall decide.

I APPOINT The Manchester Trust Company of the Town of Manchester, County of Hartford and State of Connecticut executor of this my Last Will and Testament.

IN WITNESS WHEREOF I have hereunto set my hand and seal at said Manchester on the 6 day of September A. D., One Thousand, Nine Hundred and Twenty-three.

DWIGHT W. BLISH (L.S.)

Signed, sealed, published and declared by the said Dwight W. Blish as and for his Last Will and Testament, in presence of us who at his request, in his presence, and in the presence of each other have hereunto subscribed our names as witnesses, on the 6 day of September A. D., 1923.

THOMAS K. CLARKE
RAYMOND R. BOWERS } Witnesses
WILLIAM S. HYDE

***IMPORTANT NOTICE – PLEASE READ CAREFULLY***

March 23, 2016

Deborah Webber, CEO
Los Angeles Community Hospital
4081 East Olympic Blvd
Los Angeles, CA 90023

**CMS Certification Number (CCN): 050663**

Dear Ms. Webber:

This is to inform you that based on a careful review of the findings of a revisit survey completed on February 17, 2016 by the California Department of Public Health (CDPH), the Centers for Medicare and Medicaid Services (CMS) has concluded that Los Angeles Community Hospital is still not in compliance with the applicable Conditions of Participation for a provider of hospital services in the Medicare program, established by Title XVIII of the Social Security Act.

Previously, in a letter dated January 14, 2016, you were informed that based on the findings of a November 10, 2015 complaint survey, the hospital's Medicare provider agreement could be terminated by April 13, 2016 if the facility did not come into compliance with the Medicare Conditions of Participation. Since that time, you submitted an allegation of correction, based upon which CDPH conducted the February 17, 2016 resurvey noted above. This resurvey demonstrated that the hospital remains out of compliance with the following Condition of Participation:

42 C.F.R. § 482.123 – Nursing Services
42 C.F.R. § 482.42 – Infection Control

The findings of the February 17, 2016 survey are set forth in the attached Statement of Deficiencies (Form CMS-2567). As you are aware, to participate in the Medicare program, a hospital must be in compliance with each of the applicable regulatory Conditions of Participation for hospitals at 42 C.F.R. Part 482.

Because Los Angeles Community Hospital is not in compliance with all Conditions of Participation at 42 C.F.R. Part 482, as determined by the survey completed on February 17,

2016, we must proceed with the process that could result in termination of the hospital's Medicare provider agreement. 42 C.F.R. §§ 489.53(a)(1) & (3). However, with this notice we are extending the date of termination of the hospital's Medicare provider agreement to **June 21, 2016** to provide you more time to achieve and maintain compliance. Accordingly, unless we are able to verify compliance termination is scheduled to take effect by June 21, 2016.

**Importantly, termination of Los Angeles Community Hospital's provider agreement may still be avoided if by April 4, 2016 the hospital submits to the CDPH, Bakersfield District Office,** credible documentation evidencing correction of all of the cited deficiencies and that the hospital is otherwise in compliance with all Conditions of Participation applicable to hospitals in the Medicare program as set forth at 42 C.F.R. Part 482. At a minimum, such submittal must include documentation detailing the actions taken that resulted in the alleged correction of each deficiency; the title or position of the person responsible for the correction; and a description of the monitoring process established to prevent recurrence of the deficiency. **Please note that mere plans of future correction or evidence of progress toward correction will not be sufficient.**

If we receive such a submittal by the close of business on April 4, 2016, **and** if we find that the submission constitutes a credible allegation of compliance, we will notify you of this finding and authorize a resurvey of Los Angeles Community Hospital.

In the event we do not receive a timely, credible allegation of compliance, or if a resurvey authorized on the basis of such an allegation shows that the hospital remains out of compliance, we will notify you that the termination action is to proceed, notify the public of the forthcoming termination, and advise you of appeal rights, in accordance with regulations at 42 C.F.R. § 489.53(d).

In the event termination does occur, there will be no payment for inpatient services rendered to Medicare beneficiaries admitted on or after the effective date. Payment for those beneficiaries in the hospital prior to the effective date will be limited to thirty (30) days. See 42 C.F.R. § 489.55.

**Appeal Rights**

If you do not agree with the determination to impose these actions, you may request a hearing before an administrative law judge (ALJ) of the Departmental Appeals Board in accordance with 42 C.F.R. §§ 498.40 through 498.78. A request for hearing must be filed electronically no later than sixty (60) calendar days after the date you receive this notice. 42 C.F.R. § 498.40. You should file your request for an appeal (accompanied by a copy of this letter) to the Departmental Appeals Board Electronic Filing System website (DAB E-file) at https://dab.efile.hhs.gov. Please note: All documents must be submitted in Portable Document Format ("pdf"). You are required to e-file your appeal request unless you do not have access to a computer or internet service. In such circumstances, you may file in writing, but must provide an explanation as to why you cannot file submissions electronically and request a waiver from e-filing in the mailed copy of your request for a hearing. Written request for appeals must also be filed no later than

sixty (60) calendar days from the date you receive this notice, and must be submitted to the following address:

Department of Health and Human Services
Departmental Appeals Board, MS 6132
Civil Remedies Division
330 Independence Ave, SW
Cohen Building, Room G-644
Washington, D.C. 20201

A copy of the hearing request should be sent to:

Rufus Arther, Manager
Non Long Term Care Branch
Division of Survey and Certification
90 7th Street, Suite 5-300 (5W)
San Francisco, CA 94103-6707

Your request must identify the specific issues as well as the findings of fact and conclusions of law with which you disagree and explain your basis for contending that the findings and conclusions are incorrect. You will have an opportunity to present evidence and further argument at an in-person hearing, where you may be represented by counsel. **Completion of the administrative review process established by 42 C.F.R. Part 498 is a prerequisite to obtaining judicial review.**

Should you have any questions concerning this matter, please contact Rosanna Angeldones at 415.744.3735 or at Rosanna.Angeldones@cms.hhs.gov.

Sincerely,

Rufus Arther, Manager
Non-Long-Term-Care Branch
Division of Survey and Certification

| {A 131} | 482.13(b)(2) PATIENT RIGHTS: INFORMED CONSENT<br><br>The patient or his or her representative (as allowed under State law) has the right to make informed decisions regarding his or her care.<br><br>The patient's rights include being informed of his or her health status, being involved in care planning and treatment, and being able to request or refuse treatment. This right must not be construed as a mechanism to demand the provision of treatment or services deemed medically unnecessary or inappropriate.<br><br>This STANDARD is not met as evidenced by:<br>Based on observation, interview, and record review, the hospital failed to obtain adequate informed consents for three of 31 sampled patients (28, 44 and 45). This has the potential for the patients or the patients' responsible | {A 131} | | |

LABORATORY DIRECTOR'S OR PROVIDER/SUPPLIER REPRESENTATIVE'S SIGNATURE | TITLE | (X6) DATE

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

| {A 131} | Continued From page 1<br>parties to be unaware of potential risks versus benefits of a proposed treatment prior to consent to the treatment.<br><br>Findings:<br><br>1. During an interview and review of the clinical record of Patient 28 on 2/17/16, at 9:30 AM, the admission record documented she was re-admitted to the sub acute care unit on 1/27/16. It was noted she signed her hemodialysis (a treatment in which a machine filters wastes, salts and fluid from your blood when your kidneys are no longer healthy enough to do this adequately) consent on 1/27/16. It was illegible, but the nurse who witnessed it (Registered Nurse [RN] 7) stated she had obtained Patient 28's signature indicating informed consent. There was another consent for Prozac (antidepressant medication), dated 1/27/16. The signature for the antidepressant consent was different from the markings on the hemodialysis consent. RN 7 stated, "The physician signed that one."<br><br>During an observation and interview on 2/17/16, at 10 AM, Patient 28 was lying in bed, breathing with a ventilator (breathing machine) connected to a tracheotomy (a surgically created hole through the front of a person's neck to the windpipe [trachea] which provides an air passage to help a person breathe and is often needed with long term ventilator use) and formula connected to Patient 28's feeding tube (a tube that is placed either through the nose and passed through the windpipe down to the stomach or directly to the stomach to provide liquid nutrition). Patient 28 did not wake up when spoken to. During another observation of Patient 28 with RN 7 and Licensed Vocational Nurse (LVN) 1 at 11:15 AM, RN 7 | {A 131} | | |

| A 395 | Continued From page 8<br><br>2a. During an observation and interview with the RN 25 (the charge nurse for the medical surgical unit) and the Certified Nursing Assistant (CNA) 1 on 2/16/16, at 11:46 AM, Room 111 was noted with eight patients. Patient 39 (Room 111) was observed lying in bed G with CNA 1 next to his bed. The patient appeared confused and the call light button was not observed within reach of Patient 39. CNA 1 indicated she removed the call light from the patient because "he is always on it" but he did have it earlier. CNA 1 and RN 25 proceeded to search for the call light. When the call light button was found, the cord was cut at the level of the wall; therefore, could not be accessible for Patient 39 to use. Patient 39 was approximately 2 feet from the call light. RN 25 stated CNA 1 is the assigned staff to care for Patient 39. She was asked how the nurse call system works. She stated the nurse call system includes a button at the wall with a cord that has the call light attached to it. The cord with the call light attached is what is provided to the patient. When the patient presses the red call light, it should be audible and visible above the patient room door and at the nurse's station.<br><br>During a review of the clinical record for Patient 39 and interview with RN 22, on 2/16/16, at 2 PM, the admitting diagnoses included: Altered Mental Status (AMS), Hypertension (high blood pressure), Diabetes Mellitus (a disease which results in the body's inability to produce enough insulin which results in elevated sugar levels), Abnormal Gait, Dementia and Convulsions. The care plan problem list included a care plan for patient's risk for harming himself, a care plan for pain and a care plan of fall. The fall care plan included an intervention which indicated, "...call | A 395 | | |

| {A 396} | Continued From page 18<br><br>3. During a review of the clinical record for Patient 38, with RN 25, on 2/16/16, at 10:36 AM, the patient was admitted with diagnoses of cellulitis (bacterial skin infection) to the left foot and right big toe wound. There was no individualized care plan for the treatment to the left foot or an individualized care plan for the treatment of the right big toe.<br><br>During an observation of Patient 38 and interview with RN 26 (the treatment nurse), on 2/16/16, at 11:30 AM, Patient 38's right and left foot wounds were noted. The left fourth toe was uncovered and blackened. The inner portion of the right big toe was reddened. A review of the care plans was conducted and there was one care plan problem that was not specific to either the left foot or right foot. RN 26 stated, there should be two care plans to outline the care of each of the identified areas since they require different treatment interventions. No additional information was provided.<br><br>4. During an observation of Patient 40 with RN 25, on 2/16/16, at 11:55 AM, in Room 110 Bed C, the patient was observed lying in bed. A call light to contact the nurse was not noted within reach of the patient. The patient was asked if she had a call light that could be used to call the nurse. As she felt around her bed, she was unable to locate a call light. She stated she was unable to see due to being "Legally Blind and (having) Macular Degeneration (an eye disease that progressively causes severe vision loss)". RN 25 proceeded to feel around the bed for the call light, which was then given to the patient. After being given the call light, Patient 40 proceeded to demonstrate she could use the call light. | {A 396} | | |

Dear Administrator:

FACILITY: Southern California Hospital At Hollywood
COMPLAINT NUMBER: CA00401717

Enclosed is CMS 2567 Statement of Deficiencies and Plan of Correction Form, which resulted from a recent visit to your facility. Please prepare a plan of correction, sign and date the document, return the original to this department within fifteen (15) calendar days, and retain a copy for your file.

The Plan of Correction for each deficiency must contain the following:

a) What corrective action(s) will be accomplished for the patient(s) identified to have been affected by the deficient practice.
b) How other patients having the potential to be affected by the same deficient practice be identified, and what corrective action will be taken.
c) What immediate measures and systemic changes will be put into place to ensure that the deficient practice does not recur.
d) A description of the monitoring process and positions of persons responsible for monitoring (i.e., Administrator, Director of Nursing, or other responsible supervisory personnel). How the facility plans to monitor its performance to ensure corrections are achieved and sustained. The plan of correction must be implemented, corrective action evaluated for its effectiveness, and it must be integrated into the quality assurance system.
e) Dates when corrective action will be completed. The corrective action completion date must be acceptable to the Department. The deficient practice should be corrected immediately. This date shall be no more than 30 calendar days from the date the facility was notified of the non-compliance.

If your Plan of Correction is unacceptable to the Department you will be notified in writing. You are ultimately accountable for compliance, and responsibility is not alleviated where notification of the acceptability of the plan of correction is not timely. Your plan of correction will serve as the facility's allegation of compliance. If an acceptable plan of correction is not received within fifteen (15) calendar days, the Department will recommend to the regional office and/or the State Medicaid Agency that remedies be imposed as soon as the notice requirements are met.

If you have any questions, please contact Eric Stone, Program Manager (626) 312-1134.

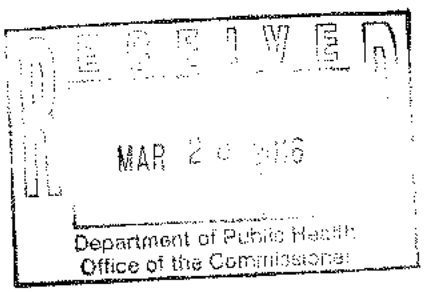
PLANNING AND DEVELOPMENT COMMITTEE

March 22, 2016

The Honorable George C. Jepsen, Attorney General
Office of the Attorney General
55 Elm Street, Hartford, CT 06106

The Honorable Raul Pino, Commissioner
Department of Public Health
Office of Healthcare Access
410 Capitol Avenue, Hartford, CT 06134

Dear Attorney General Jepsen and Commissioner Pino,



I am pleased to endorse the proposed transaction with public input for Eastern Connecticut Health Network to be acquired by Prospect Medical Holdings. It will preserve and enhance our residents' access to the community-based care that they have relied on for generations, for themselves and their families. Prospect has a strong track record of collaborating with physicians, hospitals, community providers, payers and other key stakeholders to provide quality, cos-effective services to the communities it serves.

I support the efforts of our community hospitals, which are striving to continuously improve quality while reducing cost by struggling with lower payments for services and continued cuts in state and federal reimbursements for care. It is important for state public servants to ensure that our constituents have local access to quality healthcare that is affordable. Prospect has decades of experience and success with provider payment risk arrangements now emerging in the state. With their experience and resources, the result will be better care for individuals, better health for the residents of eastern and lower costs for health care. Access to capital will allow ECHN to reform and strengthen its care delivery network to offer even more community-based services and keep its two hospitals, Manchester Memorial and Rockville General, viable to meet patient needs and expectations.

Therefore, I encourage OHCA and the Office of the Attorney General to look favorably upon the proposed transfer of assets as described in the Certificate of Need filed by ECHN.

Sincerely,

Prasad Srinivasan
State Representative, 31st District
Glastonbury

# Overview: ECHN's Journey, Its Mission

Dennis G. O'Neill, M.D.
Chairman, ECHN Board of Trustees

# Preparing for the Future at ECHN

## *Our Mission : Our Community*

- Caring for & serving the community, continuing our mission & vision
  - Improving the well-being of those we serve with quality, compassionate health care
  - Preserving ECHN: its name, local institutions, services and programs
  - Developing the next generation of physicians to serve our communities
  - Striving to continuously improve quality, safety, & outcomes with recognition by Joint Commission for the services offered
- While preserving over 3,000 jobs

ECHN
Eastern Connecticut Health Network

# Preparing for the Future at ECHN

*Serving the public need*

- More than our two hospitals, a network of 13 wholly owned companies, 12 joint ventures companies, dozens of facilities serving our communities healthcare needs
- For 2015:
  - 114,000 people treated at its hospitals
  - 60,000 patients under the care of community-based physicians employed by ECHN
  - 4,690 patients cared for by Visiting Nurse and Health Services of CT
  - 805 people received homemaker and companion services
  - Comprehensive behavioral health services
  - 61,000 emergency visits

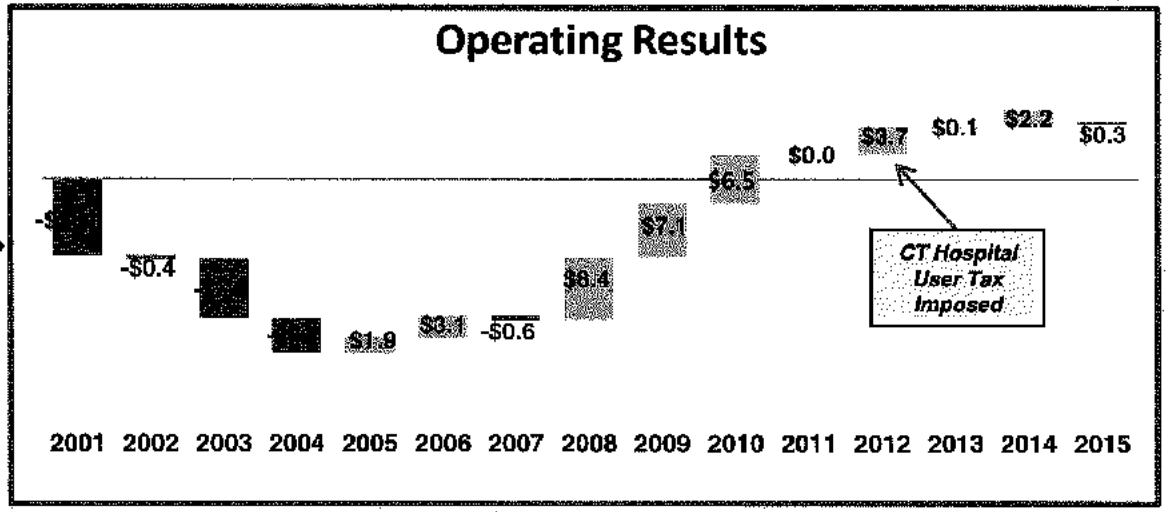
ECHN
Eastern Connecticut Health Network

ECHN℠
Eastern Connecticut Health Network

# Understanding Its Past, Preserving Its Future

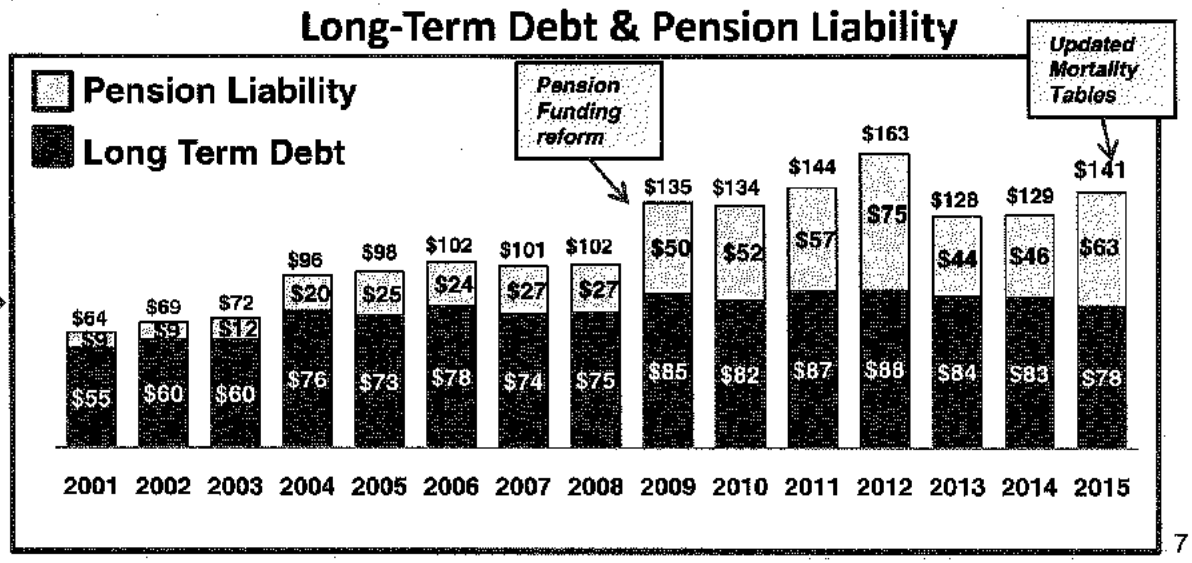
Peter J. Karl
President & CEO

# Impact of Healthcare Reform
*(PPACA)*



- More than insuring 32M more people
- Declining government payments to hospitals
- Focus on value, lowest cost with best results
- New payment systems put providers at risk
- Community focused delivery models
- Major investments required for programs, technology and facilities

ECHN
Eastern Connecticut Health Network

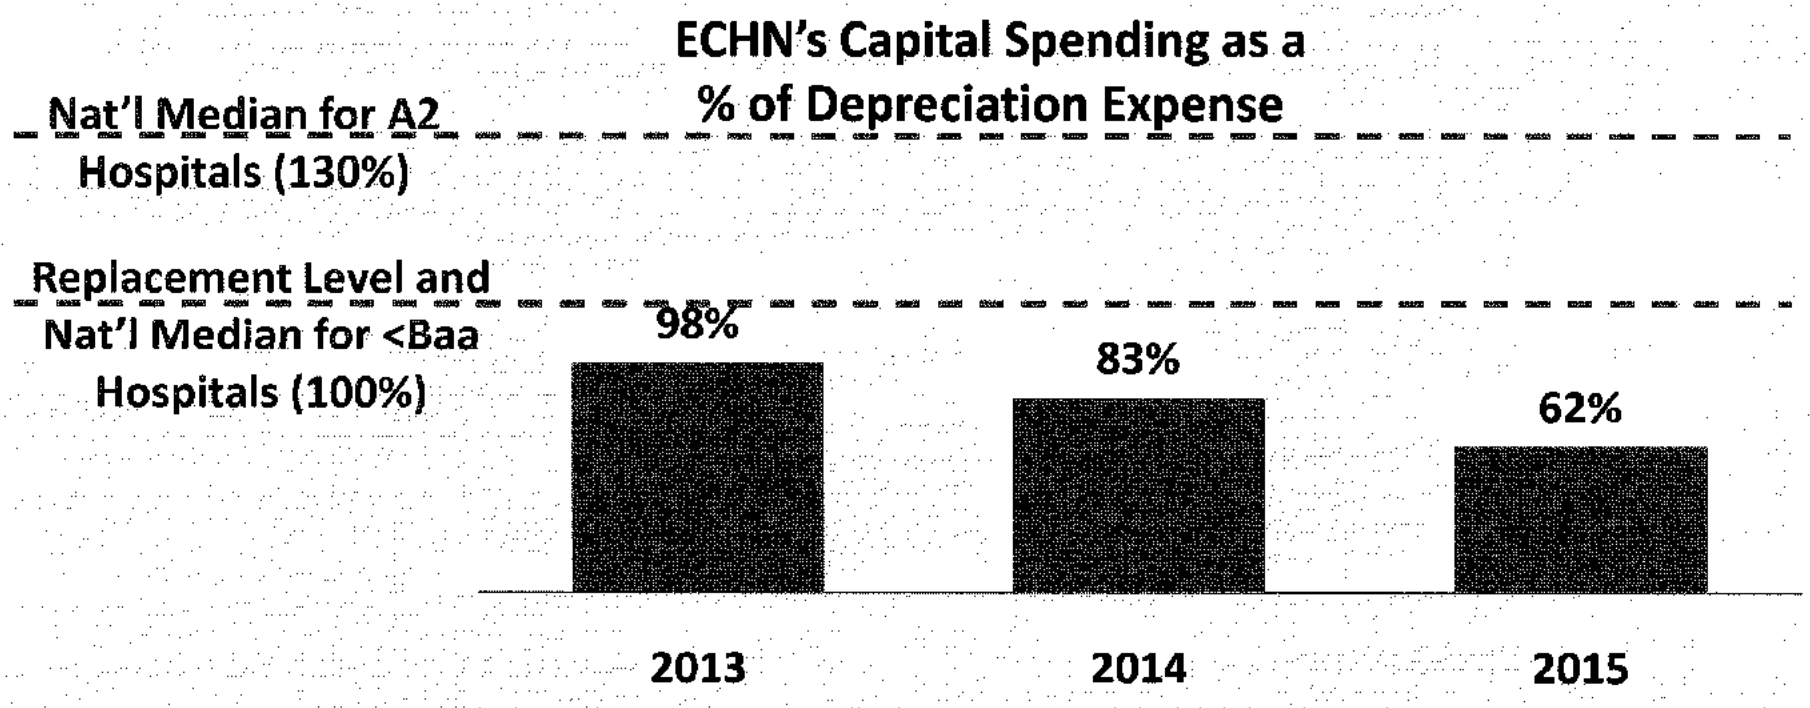


# Financial Challenges

**Low margins and growth in debt forced ECHN to defer capital investments; our historical financial performance has left the organization with a large debt structure that cannot be mitigated through margin alone.**

1. Operations contributed only $9M total over the last 15 years: Operational deficits in 2001-2004 of $23.1 million required 6 years to be overcome

2. Long term debt and pension liabilities have grown 123% ($78M) in the last 15 years– annual debt service and pension contributions now take up the lion's share of annual cash flows



# Continuing Financial Challenges
## Taxes and Reduced Government Payments

| | FY 2014 | FY 2015 | FY 2016 |
|---|---|---|---|
| CT Hospital Tax | (3,914,000) | (7,960,000) | (9,942,000) |
| CMS Sequestration | (1,104,000) | (2,208,000) | (2,208,000) |
| Medicaid Inpatient Modernization Program | | (1,200,000) | (1,600,000) |
| Low Cost Hospital Pool Eliminated | | | (300,000) |
| Medicare Wage Index | | (4,825,000) | (6,525,000) |
| | ($5,018,000) | ($16,193,000) | ($20,575,000) |

# ECHN's Financial Challenges

Historically, and in the future, ECHN's ability to invest in capital is below replacement for depreciation – inherently leading to a decrease in its asset base. The age of plant for our hospitals in 2015 was 21 years.

| | 2013 | 2014 | 2015 |
|---|---|---|---|
| Plant/Equipment Purchases | $12.1 | $10.1 | $7.4 |
| Depreciation | $12.3 | $12.2 | $11.9 |

# Negative Forces into the Future

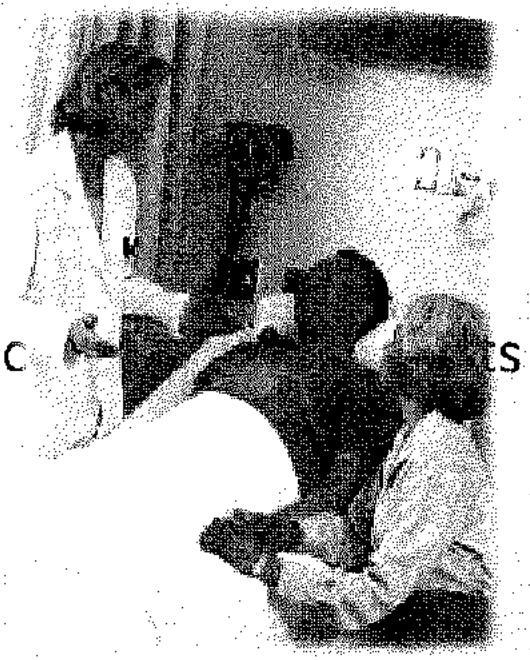
***-Continued payment erosion from federal government***

***-Declining levels of payment from state government***

***-Payment reforms with more financial risk***

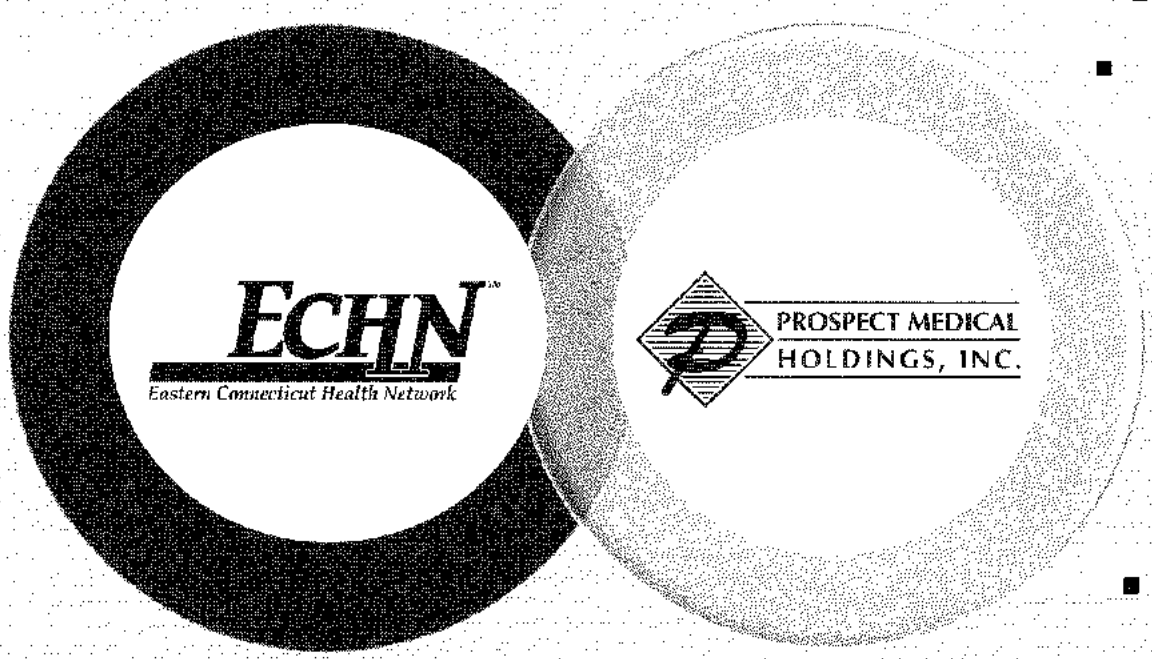
***-Continued pension obligations***

***-Rising costs***



= ***Unsustainable results with an inability to REINVEST in ECHN***

ECHN
Eastern Connecticut Health Network



# The Proposed Transaction

## *Prospect Medical Holdings to Buy ECHN*

- $105M to satisfy all of ECHN's debt and liabilities
- $75m of capital to invest in ECHN
- Maintain Manchester Memorial and Rockville General Hospitals, Woodlake at Tolland and Visiting Nurse & Health Services of Connecticut
- Continuation of the ECHN brand and mission
- Community advisory board
- Continued commitment to charity care, indigent care and c[illegible]s
- Employment for all ECHN employees
- Establishment of a community foundation to oversee certain charitable funds

# *The combination of ECHN with Prospect Medical Holdings will secure the future of care and local access for residents*

- **Aligned mission, vision & values**
- **Strong medical staff partner**
- **Experienced health plan partner with extensive risk management experience**
- **Long history of population health management**
- **Resources to invest in programs, staff, facilities and technology**

***Together with our Medical Staff, building a sustainable, thriving network of value-based care for our communities.***

ECHN℠
Eastern Connecticut Health Network

# Future Quality Assurance at ECHN

---

Joy Dorin
Vice Chair, ECHN Board of Trustees
Chair, ECHN Transaction Committee

# Due Diligence for the Transaction

- ✓ Serve the public's needs
- ✓ Positive impact on financial strength of our health care system
- ✓ Improve quality, accessibility and cost-effectiveness of health care delivery in the region, etc.
- ECHN's quality and safety efforts and achievements
  - High Reliability Organization
  - MMH and RGH, Joint Commission recognition Top Performers
- Due diligence efforts and results

Mitchell Lew, M.D.
President
Prospect Medical Holdings, Inc.
10780 Santa Monica Blvd
Suite 400
Los Angeles, CA 90025

**Re: Quality Assurance Commitment**

Dear Dr. Lew:

Reference is made to that certain draft Asset Purchase Agreement, attached hereto as Exhibit A (the "Asset Purchase Agreement"), proposed to be executed by and among Eastern Connecticut Health Network, Inc. and its Subsidiaries (collectively, the "Seller"), and Prospect Medical Holdings, Inc. and the Buyer Entities (collectively, the "Buyer") pursuant to which Seller expects to sell substantially all of its assets to Buyer (the "Transaction"). Each of the Buyer and Seller is referred to herein as a "Party" and collectively as the "Parties." Capitalized terms used but not otherwise defined in this side letter (this "Side Letter") shall have the meanings given to such terms in the Asset Purchase Agreement.

For good and valuable consideration, including the agreement by each Party to undertake the expense and effort of obtaining regulatory approvals needed to carry out the Transaction, the Parties hereto hereby agree as follows:

1. Buyer agrees to maintain for two years following the Closing, the following quality programs of Seller at the Hospital Businesses: (i) the Eastern Connecticut Health Network Patient Safety Plan for FY 2016, (ii) the Manchester Memorial Hospital and Rockville General Hospital 2016 Hospital Performance Improvement (PI) Plan, (iii) the Eastern Connecticut Health Network FY2016 Patient Experience Plan, (iv) the FY2016 Performance Improvement Goals as set forth in the document entitled "FY2015 Performance Improvement Accomplishments and FY2016 Performance Improvement Goals," and the ECHN Risk Management Plan FY2016 (collectively the "Seller Quality Programs"), copies of which are attached hereto as Exhibit B; provided however that the ECHN Risk Management Plan complies with the Buyer's insurance, legal department, and claims management requirements. Notwithstanding the foregoing, (i) Risk management will report up through the Buyer's Legal department to ensure confidential and privileged communications and work product, and (ii) settlement authority will be given by Buyer's Legal Department.

2. Buyer agrees to maintain quality assurance and performance improvement programs that are consistent with industry best practices and quality improvement programs as currently implemented in Buyer's Rhode Island facilities, modified as necessary

given local circumstances. Buyer acknowledges that following the Closing, the Local Board shall have oversight over the quality assurance programs.

3. If Buyer believes that modifications are needed to the Seller Quality Programs within two years following the Closing due to changed circumstances following the Closing, Buyer shall submit a request for such modifications in writing to the Local Board, which shall reasonably consider whether to accept such modifications. Buyer shall not implement any modifications to the Seller Quality Programs without first obtaining the approval of the Local Board for such modifications, which approval shall not be unreasonably withheld. Notwithstanding the foregoing, Buyer has sole authority to make any changes necessary to (i) address issues of patient safety, (ii) changes in federal, state, and local laws; or (iii) as mandated by a governmental agency.

4. Notwithstanding anything to the contrary in this Side Letter, in the event the Transaction is terminated or abandoned by either Party, this Side Letter shall be deemed void and of no force and effect.

If this Side Letter is acceptable to Buyer, we ask that Buyer please sign and date this Side Letter where indicated below. Please return an originally signed and completed copy of this Side Letter to me.

Very truly yours,

**EASTERN CONNECTICUT HEALTH NETWORK**
**Patient Safety Plan**

FY 2016

## I. PURPOSE:

The purpose of the system-wide Patient Safety Plan at the Eastern Connecticut Health Network is to improve patient safety and reduce risk for our patients by using a proactive, non-punitive approach, resulting in recognition as a High Reliability Organization (HRO) with a culture committed to promoting safety as a daily priority.

## II. OBJECTIVES:

A. To foster a culture of safety through accountability, responsibility and employee empowerment
B. To strive for zero defects (occurrences) of safety incidents through the recognition and tracking of patient safety risks and through the acknowledgement of medical/health care errors
C. To provide a standardized approach for the reporting of patient safety incidents that focuses on process and systems with minimization of individual blame or retribution
D. To initiate actions to reduce identified patient safety risks
E. To improve the recognition and perception of quality and safety within the organization and the communities we serve
F. To establish a communication mechanism that provides for regular communication of our patient safety priority initiatives and outcomes both internally and externally
G. To utilize a multidisciplinary forum to review and analyze events, disseminate information and provide an avenue for individuals to bring concerns forward.
H. To disseminate the knowledge gained within the organization and in other health care organizations in order to promote changes in processes to improve patient safety
I. To assure compliance with the National Patient Safety Goals and consider best practices such as IHI initiatives, AHRQ, and CHA Collaboratives
J. To conduct annual proactive risk assessments on high-risk processes
K. To improve customer satisfaction by focusing on patient safety and well-being

The Patient Safety Plan will provide a systematic, coordinated and continuous approach to the maintenance and improvement of patient safety through the establishment of mechanisms that support effective responses to actual occurrences; ongoing proactive reduction in medical/health care errors; and integration of patient safety priorities into the new design and redesign of all relevant organization processes, functions and services.

As patient care, and therefore the maintenance and improvement of patient safety, is a coordinated and collaborative effort, the approach to optimal patient safety involves multiple departments and disciplines in establishing the plans, processes and mechanisms that comprise the patient safety activities at Eastern Connecticut Health Network.

## III. SCOPE/COMPONENTS OF ACTIVITES

To provide ongoing assessment, using internal and external knowledge and experience to identify, prevent and mitigate patient safety occurrences. Patient safety occurrence information will be reviewed by the Patient Safety Committee to prioritize organizational activity efforts as to the redesign of processes based on the safety occurrences identified. Examples of patient safety occurrences include physical or psychological injury or risk of; medication error, actual or potential; adverse drug reaction; transfusion reaction, etc.

Patient safety occurrences fall into one of the following categories:

**A. No Error – has capacity to cause error**
**B. No Harm- Did not reach patient (Good Catch)**
**C. No Harm – Did reach patient**
**D. No Harm – Did reach patient – monitor or intervene**
**E. Harm – Temporary harm need intervention**
**F. Harm – Temporary harm need prolonged hospitalization**
**G. Harm – Permanent harm to patient**
**H. Harm – Intervention necessary to sustain life**
**I. DEATH**

**Sentinel Event:** A sentinel event is an unexpected occurrence involving death or serious physical or psychological injury, or risk thereof. "Serious injury specifically includes loss of limb or function. "Risk thereof, includes any process variation for which a recurrence would carry a significant chance of a serious adverse outcome." See Corporate Administrative Policy # 300.01.

A. Perform Broad Spectrum Data Monitoring and Analysis: The creation of a safe patient care environment relies on identifying, reporting, tracking and sharing current and potential problems and aggregate data collected and analyzed through multiple sources of reporting which may include:

1. Incident reporting system
2. Serious Safety Event Rate
3. Daily Safety Huddle for review of system and individual safety concerns
4. Word of mouth reporting/huddles
5. System/process for recall and device failure alerts
6. Failure Mode and Effects Analysis
7. Root Cause Analysis

B. Provide the Codification of Safety Principles: The creation and revision of supporting policies and processes including the associated education that clearly delineates how the organization will react to errors, balancing a non-punitive approach with the need for action for repeated or egregious errors.

1. Embed Patient Safety Habits and Behaviors throughout organization
2. Promote a Just–culture using the accountability algorithm
3. Perform Patient Safety Rounds
4. Enhance Teamwork behaviors
5. Improve the knowledge of safety practices with structure and resources in place
6. Enhance clear structured communication including Huddles, Briefings, Debriefings, and Handoffs/SBAR (Situation, Background, Assessment and Recommendation)
7. Survey the Culture of Safety on a regular basis
8. Spread best-practice across the system

C. Provide a Staff-Centered Safety Infrastructure: through the promotion of multidisciplinary participation that values staff ownership and engagement in the creation of a safe practice environment:

1. Patient Safety Committee (see Attachment)
2. Patient Safety Action Teams
3. Patient Safety Coach Committee and Safety Coaches
4. Patient Safety Rounds, allowing for direct communication of safety concerns

5. Best-practice resources/education as it relates to any patient safety endeavor. For example, pressure ulcer reduction and central line infection prevention, etc.
6. Organization-wide training on safety habits and behaviors

D. Enhance Patient Safety-Focused Decision Support through the adoption of criteria-based protocols and technological innovations such as Checklists/standardization to reduce variation, Care Protocols (Fall, Central line bundle, etc.), Smart pumps, Bar-coding, and On-line incident reporting.

E. Perform Retrospective Internal Assessment: through ongoing evaluation and reevaluation of program and process changes, utilizing proven metrics and benchmark data to monitor improvement, confirm the efficacy of actions taken and/or acknowledge initiatives that fail to produce the intended results.

1. Data from IRIS – monthly/quarterly/yearly
2. Serious Safety Event Rate – monthly
3. Days since last fall with injury, HAPU, CLABSI
4. National benchmarking-NDNQI
5. Internal Dashboards
6. Results of Safety Surveys
7. Quality Monitoring

## IV. AUTHORITY AND ACCOUNTABILITY

The Board of Trustees, via the Quality Improvement Council (QIC), delegates the responsibility, authority and accountability for the coordination and oversight of the Patient Safety Program to the interdisciplinary Patient Safety Committee, co-chaired by the Patient Safety Director/Officer and/or Vice President of Quality and Safety and a physician assigned by the QIC. The Patient Safety Committee is a sub-committee of the network's Quality Improvement Council. Patient safety reports and committee minutes will be submitted to the QIC. The Patient Safety Director/Officer and/or the Vice president of Quality and Safety is responsible for the advancement of the ECHN Culture of safety/just culture through a strong clinical presence and administration of the Safety Program on a day-to-day basis.

## V. PROGRAM CONFIDENTIALITY

When the Patient Safety Committee engages in quality "review to gather and review information relating to the care and treatment of patients for the purpose of (A) evaluating and improving the quality of health care rendered; (B) reducing morbidity or mortality; (C) establishing and enforcing guidelines designed to keep within reasonable bounds the cost of health care, "it is considered protected under Connecticut State statute 19a-17b.

## VI. COMMUNICATION PLAN

Patient safety relies on interactive and open communication through the exchange of ideas and information. Timely communication between all committees and organizational groups responsible for patient care and safety is expected. Safety Information will also be published regularly to provide communication of our patient safety priority initiatives and outcomes both internally and externally.

## VII. ANNUAL REAPPRAISAL

The co-chairs, with input from the Patient Safety Committee, will conduct an annual review of the Patient Safety Plan for evaluation of the program's effectiveness and to establish priorities for the next year. Recommendations will be forwarded to the appropriate committees or departments throughout the

organization. The Patient Safety Plan is approved by administration, the medical staff and the governing board.

**VIII. ATTACHMENT:** Patient Safety Committee (Purpose/Objectives/Composition)

## ADOPTION

**This Patient Safety Plan has been reviewed and adopted by the Board of Trustees, the Medical Staff acting through its Executive Committee, and by the Hospital's management, as attested by the signatures below:**

Dennis G. O'Neill

ATTACHMENT
to
Patient Safety Plan

**EASTERN CONNECTICUT HEALTH NETWORK**
**Patient Safety Committee**

**PURPOSE:**

Under the direction of the Patient Safety Officer/Vice President of Quality and Safety, the Patient Safety Committee is charged with analyzing and tracking adverse events, auditing hospital procedures to minimize risk, and developing/sustaining a culture of patient safety.

**OBJECTIVES:**

- Receive occurrence reporting data from Risk Management, review and act on this data to identify trends and/or opportunities for improvement, assign responsibility, and set timelines for action.
- Receive and review complaint information from Patient Representatives related to patient safety.
- Review the Joint Commission's Sentinel Event Alerts and National Patient Safety Goals, assign responsibility for monitoring ECHN's compliance with these requirements, and charter teams to improve areas of deficient compliance or performance.
- Use published information about adverse or sentinel events in other organizations as opportunities to apply "lessons learned" to appropriate ECHN systems and processes.
- Assist in the review and action plan related to adverse events or sentinel events working under the Sentinel event policy and monitor the completion of and compliance with corrective action plans.

Reviews and discusses all Serious Safety Events for lessons learned as well as monthly Serious Safety Event rates

- Inform ECHN leadership and Medical Staff about changes in regulatory requirements that may impact patient safety procedures and practices, and assure compliance with those regulations.
- Provide yearly review and approval of ECHN's Patient Safety Plan.
- Receive and act on reports from the following committees or areas on a scheduled and ad hoc basis:
  - Grievance Committee
    - Patient safety-related complaints
  - Claims Committee Data
    - Incident Reporting*
  - Code and Rapid Response Committee
  - Critical Care Committee
    - VAP
    - CLABSI
    - Best practices related to critical care patient care/safety
  - EOC Safety Committee
  - Fall Committee
  - Infection Control and Prevention Committee (CLABSI, CAUTI, SSI, etc.)
  - Patient Safety Action Teams: i.e.,
    - Safe Patient Handling
    - Needlesticks and Blood Borne Pathogens
  - Pharmacy & Therapeutics
    - Medication Safety Subcommittee

    - Adverse Drug Events
  - Physician Practices
    - Physician Patient Safety Coaches
  - Staff Concerns
    - Patient Safety Rounds/Rounding to Influence
    - Staff Membership on committees
    - Patient Safety Coaches
    - SVP and VP Rounding for Outcomes
  - Patient Concerns:
    - Leadership Rounding with Patients
  - Vascular Access Committee
  - Woodlake at Tolland
  - Wound Committee
- Address any issues identified through Root Cause Analysis Teams, FMEAs, or committee reports that will require data monitoring and ongoing reporting will be followed by the Patient Safety Committee.
- Develop and support a non-punitive approach in the management of errors and occurrences. The focus will be placed on remedial actions rather than punitive actions taken.
- Sustain behaviors of an Accountable/Just Culture

The Patient Safety Committee shall meet at least ten (10) times per calendar year or more often as deemed necessary by the chair.

**COMPOSITION:**

The committee will be co-chaired by the Patient Safety Officer/Director /Vice President of Quality and Safety and a physician assigned by the QIC. Membership will include representation from the Medical staff, Nursing staff, Medical Imaging, Administration, Risk Management, Pharmacy, Quality Improvement, and Human Resources. Representatives from other departments including, but not limited to, Infection Control, Security, Environmental, Food and Nutrition, Cardiopulmonary, Information Technology, Laboratory, and Finance will be invited to attend as ad hoc members.

Initiated: 05/19/2011
Revised: 01/11/16

# MANCHESTER MEMORIAL HOSPITAL (MMH)
# ROCKVILLE GENERAL HOSPITAL (RGH)

## 2016 HOSPITAL PERFORMANCE IMPROVEMENT (PI) PLAN

## I. PURPOSE AND MISSION

This plan provides a proactive systematic approach to designing, measuring, assessing, and improving performance in Quality, Patient Safety and Patient Experience, and to ensure that it is accomplished in accordance with the direction of the Board of Trustees, Medical Staff Bylaws, and our Organizational Mission: To improve your well-being by providing high-quality, compassionate healthcare. We will achieve our Mission through a commitment to Caring, Teamwork, Respect and Communication. In doing this, we will accomplish our Vision: To be your first choice for excellence in healthcare. Further, the Organization will demonstrate a consistent effort to deliver safe, high quality patient care and provide an optimal patient experience with achievable goals. We support becoming and maintaining status as a High Reliability Organization by providing a culture of patient safety through Safety habits and behaviors.

This PI Plan is developed in conjunction with and is intended to compliment the Patient Safety, Patient Experience, Environmental, and Risk Management Plans.

## II. OBJECTIVES

A. To increase the probability of desired patient outcomes, by assessing and improving those governance, managerial, clinical and support processes that most affect such outcomes, and by providing an ongoing process to improve care, identify and resolve issues.

B. To ensure a proactive integrated patient safety program throughout the hospital with a non-punitive, but accountable, approach to identifying risks to patient safety and reducing factors that contribute to unanticipated adverse events and/or unanticipated outcomes.

C. To establish priorities for performance improvement activities. This is accomplished by using information related to patient safety and unanticipated adverse events and/or outcomes affecting patients, including serious safety and sentinel events in our own and other health care organizations, as well as focusing on those internal and external processes and activities with the greatest potential impact on patient care outcomes and satisfaction. These priorities include National Patient Safety Goals as identified by The Joint Commission (TJC).

D. To carry out and communicate performance improvement activities including findings, conclusions, recommendations, actions taken, and results of those actions, through established channels to appropriate leaders and members of the hospital.

E. To assure that new or modified processes are designed well. Such processes reflect the hospital mission, vision, and strategic plan, the needs and expectations of patients, staff and others, the integration of safety priorities, and the use of up-to-date sources of

information, such as evidence based practice guidelines, and such processes will be evaluated for their effectiveness.

F. To ensure that those carrying out tasks are competent to do so. This is accomplished through performance-based evaluations and ongoing education and training to maintain and improve staff competency.

G. To ensure that Medical Staff credentialing activities comply with Federal, State, TJC regulations and Medical Staff Bylaws.

H. To ensure that processes measured on a continuing basis include those that affect a large percentage of patients, those that place patients at serious risk if not performed well, or those that are performed when not indicated, or not performed when indicated, or are likely to have been problem prone. These include processes related to operative, invasive, and other procedures that place patients at risk, medication management, use of blood and blood products, restraint use, seclusion use, outcomes related to resuscitation, infection control, medical records, utilization management, risk management, quality control, autopsies, organ procurement effectiveness, CORE measures, HCAHPS (Hospital Consumer Assessment of Healthcare Providers and Systems), human resource measures, environmental, and patient safety.

I. To ensure that data is collected and analyzed on a regular basis regarding patient needs and expectations, including patient, family and staff opinions, perceptions of risks to patients, and when applicable, the effectiveness of pain management.

J. To ensure the appropriate use and effectiveness of services for the provision of patient care and treatment obtained through contract relationships.

## III. SCOPE AND ORGANIZATION

All services shall participate in integrated performance improvement efforts. Participation includes, but is not limited to, activities that improve patient safety, patient care and associated functions and services, personnel competency and regulatory compliance. Consideration will be given to such things as Institute for Healthcare Improvement (IHI) initiatives, National Patient Safety Goals and TJC, Center for Medicare and Medicaid Services (CMS), CORE measures, and HCAHPS. The Performance Assessment/Improvement Structure and Membership is shown in Attachment #1a,1b and 1c.

As required by TJC and CMS, we publicly share our CORE measure results related to Venous Thromboembolic Event, Stroke, Perinatal Care, Hospital Based Inpatient Psychiatric Services, Sepsis as well ED throughput and outpatient measures, Immunizations, Readmissions, Mortality, Hospital Acquired Infection and Conditions, and patient satisfaction (HCAHPS). This information is also shared regularly system wide with management and hospital staff, as appropriate.

## IV. AUTHORITY AND ACCOUNTABILITY

The organization's leaders include members of the Board of Trustees, Medical Executive Committee (MEC), administrative management, and directors and managers. The organization's leaders set expectations, develop plans, and implement procedures to assess and improve the quality of the organization's governance, management, clinical and support processes. The organization leaders encourage learning about unanticipated adverse events and/or unanticipated outcomes and develop a non-punitive environment that encourages the identification and management of actual and potential risks to patient safety. As appropriate, the Board shall hold the Medical Staff and management responsible for implementing performance improvement and safety efforts. The leaders will assess the need for organizational performance improvement and safety efforts, set priorities, allocate resources for assessment and improvement, assure that staff has the appropriate training available, design communication systems that foster open sharing of information and the coordination of performance improvement and safety activity.

A. The Board of Trustees has the ultimate responsibility for assuring the quality and effectiveness of patient care services provided by its medical staff members and other professional and support staff. The Governing Body meets this responsibility by its oversight of the effective functioning of activities related to performance improvement, risk management, safety, the credentialing of Medical Staff and competency of licensed and non-licensed staff, financial oversight and mechanisms/policies designed to ensure the provision of quality patient care. The Board of Trustees delegates the actual performance assessment and improvement process to the medical, professional, and support staffs.

   The Board will review periodic reports of findings, actions and results from improvement activities, in order to assess the program's efficiency and efficacy. A report for the Board will be prepared at least quarterly by the Vice President, Quality and Patient Safety, and will include an overview of: clinical and non-clinical indicators, relevant monitoring activity, performance improvement team results and status. In addition, the Board receives an Annual Report to Governance/Leadership that includes summary information related to System Failures, Sentinel Events, Reportable Events, and r actions taken to Improve Safety. The Board takes timely and appropriate action to ensure patient safety and the proper delivery of quality patient care.

B. The Quality Improvement Council (QIC) is responsible for guiding quality monitoring and improvement activity, excluding individual Medical Staff peer review which is performed by the Medical Peer Review Committee(s). Membership of QIC includes leaders from the Medical Staff, Senior VP Medical Affairs, VP Quality and Patient Safety, and Senior VP & Chief Nursing Officer, VP of Patient Care Services, , Quality Improvement (QI) Managers, Administrative Director of Patient Care Services, and a Human Resources representative . Other members may be added at the discretion of the QIC or Board of Trustees. The QIC will prioritize projects, provide guidance and support for performance improvement efforts, and is responsible to the Board for its actions. The QIC shall meet at least quarterly.

   The QIC will:

- Assess departmental and interdepartmental needs for performance improvement efforts through periodic review of internal and external data, departmental, administrative, and/or Medical Staff monitoring data, trends related to customer satisfaction, direct requests from the Board, Medical Staff, administration and employees, all within the context of the overall strategic direction of the institution.
- Determine the need for multi-disciplinary teams and will empower teams.
- Determine the need and provide for training and education in performance improvement, patient safety, and patient experience including management training, training related to performance improvement tools and techniques, general employee training on performance improvement through department directors, and training incorporated into orientation programs.
- Consider the need for education of the medical staff concerning identified performance improvement opportunities, pain management, Infection Control, and will communicate such needs to the Medical Education Committee.
- Provide communication to the Board, Medical Staff, and to departments about performance improvement efforts, requirements, and recognition of those efforts.

The responsibilities of QIC Approved Teams include periodic status reports, which may be submitted in writing or may be given verbally to the QIC. Status reports may be submitted on the Performance Improvement (PI) Project Cycle Documentation form (Attachment #4).

The QI Council will receive reports related to Root Cause Analysis and Action Plans.

C. The Patient Safety Committee, composed of organizational leaders, staff, and medical staff, identify patient safety priorities. The committee in collaboration with the Quality Improvement Council promotes education, breaks down barriers, communicates changes, promotes collaboration, ensures accountability for actions, and celebrates successes.

D. The Patient Experience Steering Committee is composed of organizational leaders and medical staff who are charged with identifying, assessing, and evaluating the patient experience throughout ECHN. The Committee is responsible for the overall plan to improve the patient Experience throughout ECHN.

E. Administrative Management is responsible for assuring performance improvement and safety efforts are based on the organization's strategic direction, vision, and identified priorities. Management monitors key business and quality indicators.

Reports of key business indicators, information related to patient safety and unanticipated adverse events and/or unanticipated outcomes affecting patients, including sentinel events in other health care organizations, as well as findings and information received from performance assessment measures, will be used to provide direction for relevant performance improvement activity.

E. Department Directors and managers are responsible for ensuring the following:

- Individual departments will participate in performance improvement and safety activities. Employees at all levels will be included.
- Individual departments will participate in at least one project annually and will focus on improvements related to patient/family/customer satisfaction, efficacy, appropriateness, availability, timeliness, effectiveness, continuity, safety, efficiency and/or respect and caring.
- The departments' Vice President will provide direction in the development of annual departmental PI Plans and project selection. Directors will take responsibility for reporting their monitoring activity and related performance improvement efforts.
- Department Managers and Directors plan and implement programs that evaluate and enhance the competence, skills and abilities of the staff. Vice Presidents/Directors will assure that reports of department performance assessment and improvement activity are submitted and reviewed in a timely manner.
- Forms for planning, recording and documenting quality improvement activity appear in Attachments 2-4.

F. The Medical Staff is responsible for taking an active leadership role in improving the quality and safety of patient care, education of patients and families, and coordination of care with other practitioners and hospital personnel through the involvement in multi-disciplinary teams and committees. The President of the Medical Staff, through the Medical Executive Committee (MEC), coordinates Medical Staff involvement through appointments, delegation of assignments, and support of patient care monitoring. The Medical Staff participates in performance improvement activities to address:

- Clinical monitoring and evaluation of patient care provided by individuals with clinical privileges, which is accomplished as a peer review function by the Medical Staff leadership or their designees. Improvement and safety initiatives and other internal/external data will be analyzed with findings, conclusions, recommendations, actions, and planned follow-up evaluations forwarded to the appropriate staff and department chairpersons.
- Adequate resources for improvement activities, through the assignment of Medical Staff members to participate as needed and the librarian to facilitate access to evidence-based literature.
- The status of identified problems or opportunities to monitor improvement or resolution.
- Collaboration of activity and communication, as appropriate, in improvement activities.
- Written reports of recommendations, actions taken, and the results of these actions.
- Mechanisms of appropriate reporting of improvement and safety activities to members of each Medical Staff department, the QIC, and the Board of Trustees through the Board Performance Assessment /Improvement Committee.
- Participation in the planning and evaluation of the effectiveness of improvement activities, as part of the hospital's annual appraisal of improvement efforts.

## V. MONITORING ACTIVITIES

A. Measurement of clinical processes will include:

- Care provided to high-risk populations.
- Operative or other high risk procedures including the use of sedation/anesthetics, adverse events, appropriateness, planning, preparation of procedures, discrepancies between pre-operative and post-operative diagnoses, identified in reports and pathologic review of specimens.
- Processes related to medication management: Quality improvement activities include selection and procurement; storage; ordering and transcribing, preparing and dispensing; administering; and monitoring the medications' effects on patients.
- Process related to the use of blood and blood products including ordering, distribution, handling, dispensing, administration, monitoring the blood and blood products' effects on patients, and monitoring of confirmed transfusion reactions.
- Fall reduction activity.
- Autopsies and pathology review.
- The use of restraints and/or seclusion.
- Quality control and infection surveillance and prevention activities.
- Patient's perceptions of care, treatment and services including their specific needs and expectations, how well their needs are met by the organization, and how the organization can improve patient safety and overall patient satisfaction.
- Patterns and trends in utilization of clinical and non-clinical resources in the treatment of patients.
- Effectiveness of pain management.
- The effectiveness of response to change or deterioration in a patient's condition (Rapid Response data), as well as results of resuscitation efforts.
- Staffing appropriateness.
- Joint Commission CORE Measures and other publicly reported measures.
- Compliance with the National Patient Safety Goals.

B. The integrated safety program monitors all types of occurrences, ranging from no harm/good catches to serious safety events and sentinel events. Serious safety eand sentinel events are investigated using a multidisciplinary approach. A sentinel event is an unexpected occurrence involving death or serious physical or psychological injury, or the risk thereof. The investigation includes conducting a root cause analysis of the event, identifying corrective actions needed to prevent reoccurrence and to improve the process(es), developing specific indicators of the effectiveness of improvement efforts, monitoring the actions taken for a defined period of time, and conducting redesign of process(es) if indicated.
Every 18 months, at least one high-risk process will be selected for intensive proactive risk assessment. The process will be analyzed to identify undesirable variation. (Failure Mode Effect Analysis/FMEA) For each failure point, the seriousness of effect on the patient is weighed for each fail point (Criticality). For the most critical effects, an analysis will identify the underlying reasons and contributing factors to adverse outcomes. The performance improvement process will be followed to redesign and minimize the risk of failure, or to protect the patients from potential of failure.

The Patient Safety Committee integrates risk management and performance improvement processes with activities of organization and medical staff committees including but not limited to Pharmacy and Therapeutics, Infection Control, Fall and Wound Committees, Environment of Care Committee, and Medication Safety.. The goal of this committee is monitoring key indicators, implementing target strategies, and conducting proactive risk assessments, the organization will be able to reduce unanticipated adverse events, improve outcomes, and prevent sentinel events. The Patient Safety Committee will report regularly to the QIC.

C. Risk management: The Director of Risk Management, in collaboration with clinical and administrative leadership, assists in the following: identifying general areas of potential risk in the clinical aspects of patient care and safety; developing identification criteria for potential risks in patient care and safety; coordinating specific corrective actions for problems identified; and designing proactive risk reduction strategies.

The Risk, Safety, and QI staff share findings from high-risk indicators, linking data to provide solutions for potential safety and quality concerns.

## VI. DATA

Sources of data for performance improvement review activities shall include, but not be limited to, the following:

Medical records; morbidity/mortality review findings; monitoring activities of the Medical Staff and hospital departments or committees; review of practice patterns; patient and physician trends; pertinent risk management findings; information related to patient safety and unanticipated adverse events and/or outcomes affecting patients, including sentinel events in other health care organizations; PI team activities; financial data; claims; utilization review findings; data obtained from staff interviews and observation; patient surveys or complaints; Qualidigm, fiscal intermediaries or private agencies; committee and department minutes; qualitative and secondary market research and special studies, current literature, and benchmark data.

**Retention of Data and Reports:**

All formal Medical Staff minutes and reports will be maintained permanently. Physician profiles and review forms will be retained permanently. All other formal PI minutes and reports will be retained from 3 to 7 years, as appropriate.

## VII. PROGRAM CONFIDENTIALITY

When the Performance Improvement process, engages in quality "review to gather and review information relating to the care and treatment of patients for the purpose of evaluating and improving the quality of health care rendered, reducing morbidity or mortality, or establishing and enforcing guidelines designed to keep within reasonable bounds the cost of health care," it is considered protected under Connecticut State statute 19a-17b.

## VIII. ANNUAL REAPPRAISAL

With input from the QIC and MEC, an annual review of the QI program will be conducted by the Board for evaluation of the program's effectiveness. Findings will guide program revision.

## ADOPTION

**This Performance Improvement Plan has been reviewed and adopted by the Board of Trustees, the Medical Staff acting through its Executive Committee, and by the Hospital's management, as attested by the signatures below:**

# 2016 NATIONAL PATIENT SAFETY GOALS

## GOAL 1: IMPROVE THE ACCURACY OF PATIENT IDENTIFICATION

Use at least two patient identifiers when providing care, treatment and services.

- Ask the patient to state their full name and DOB, and/or view the wristband for two identifiers.
- Compare identifiers to document/source.
- All staff are responsible for correct patient identification.
- All specimen labeling MUST be done at the bedside in the presence of the patient.

Eliminate transfusion errors related to patient misidentification.

- Two licensed caregivers at the bedside must verify order to transfuse blood product, blood type, unit number and expiration date, patient name and birth date, and sign name as verification.
- Match the patient to the blood component by using two patient identifier process.

## GOAL 2: IMPROVE EFFECTIVENESS OF COMMUNICATION AMONG CAREGIVERS

- Verbal/telephone orders and critical test results, first write down and then read back to confirm.
- Receive and report critical results of tests in a timely manner to a licensed caregiver for timely action as per policy.
- Standardize hand-off communication that includes using SBAR and Ticket to Ride when the patient is transferred from one caregiver to another.

## GOAL 3: IMPROVE THE SAFETY OF USING MEDICATIONS

- Identify a list of look-alike/sound-alike medications. Prevent errors with these medications with a flag (!) in Meditech and Pyxis.
- High alert medications are designated with a "++" in the eMAR to bring attention to these medications.
- In perioperative and other procedural settings, label all medications and solutions on an off the sterile field.
  - ✓ Two qualified individuals verify verbally and visually when the person preparing the medication is not the person administering the medication.
- Reduce the likelihood of patient harm associated with the use of anticoagulation therapy.
  - ✓ Patients on Coumadin receive diet instructions from dietician and nursing.
  - ✓ Be alert to order entry and eMAR built-in safety guides.
  - ✓ Use anti-coagulation flow sheets.
  - ✓ Baseline and ongoing lab tests are required for all anticoagulants.

### Medication Reconciliation Process

- For inpatient, or if seen as an outpatient, obtain a current list of medications.
- Include as much information as possible, e.g., name, route, dose, frequency and purpose.
- Compare the medication information the patient brought to the hospital with the medications ordered for the patient by the hospital in order to identify and resolve discrepancies.
- Provide the patient (or family) with written information on the medications the patient should take when discharged.
- Explain the importance of maintaining medication information to the patient when he or she is discharged (e.g., providing a list to the primary care physician, or to carry a medication card).
- Medications are reconciled by the physician at admission and at discharge.

## GOAL 6: REDUCE HARM ASSOCIATED WITH CLINICAL ALARM SYSTEMS

- Improve the safety of clinical alarm systems.
- Establish alarm safety as an organizational priority.
- Identify the most important alarms to manage based on each hospitals' own internal situations.
- When equipment includes alarms, do not disable or turn down the volume below an audible range.
- Know what the appropriate alarm parameters should be.
- Respond to alarms in a timely fashion.
- Establish policies and procedures for managing alarms.
- Educate staff and practitioners about the proper operation of alarm systems.

## GOAL 7: REDUCE RISK OF HEALTH CARE ASSOCIATED INFECTIONS

- Wash hands with soap or antibacterial liquid with friction for 15 seconds OR apply antiseptic liquid (Purell) into the palm of the hands and rub on all surfaces until dry (up to 5 washings). Hand washing only for C-Diff.
- No artificial nail applications with direct patient contact.
- Report all identified cases of unanticipated death or major permanent loss of function related to healthcare infection.
- Evidence based practices to prevent healthcare associated infections are due to MDRO.
  - ✓ Hand hygiene campaign; Wash in. Wash out.
  - ✓ Monitoring isolation compliance with staff and patients and appropriate use of isolation carts.
  - ✓ Appropriate identification and signage for MDRO patients.
- Implement evidence based practices to prevent central line associated bloodstream infections including short and long term venous catheters and PICC lines.
  - ✓ Use packets that have masks, sterile gowns, drapes, and gloves for all central line insertions.
- Implement best practices for preventing surgical site infections.
  - ✓ Routine cleaning of OR rooms.
  - ✓ Good Hand Hygiene.
  - ✓ Clip, do not shave patient.
  - ✓ Keep patients warm.
  - ✓ Give prophylactic antibiotic within 60 minutes of initial incision.
  - ✓ Prep and scrub with CHG 4%.
- Use best practices to prevent indwelling catheter associated UTI (CAUTI)
  - ✓ Educate staff, practitioners, patients and families about CAUTI prevention.
  - ✓ Follow written guidelines based on EBP guidelines for inserting and maintaining an indwelling catheter.
  - ✓ Secure catheters for unobstructed urine flow and drainage.
  - ✓ Evaluate need for indwelling catheter daily.

## GOAL 15: IDENTIFY SAFETY RISKS IN OUR PATIENT POPULATION

- Identify patients at risk for suicide through risk assessment and identification of signs and symptoms indicating risk for suicide.
- Address the patient's immediate safety needs.
  - ✓ Distribute prevention information such as the crisis hotline to individuals and their families.

For patients at risk, consider the immediate environment and eliminate access to potential hazards. Monitor for medical conditions that might increase impulsivity.

## Universal Protocol

Prior to the start of any surgical or invasive procedure, a final verification process using active communication techniques will be used.

- Universal Protocol
  - ✓ A pre-procedure verification process is conducted.
  - ✓ Marking of the procedure site occurs.
  - ✓ A time out must be performed immediately prior to starting invasive procedures.
  - ✓ Follow the "Universal Protocol" policy and use the "UNIVERSAL PROTOCOL" form to document.
  - ✓ ALL members of the surgical/procedure team (staff, physicians and anesthesia) actively participate in the verification process.

**EASTERN CONNECTICUT HEALTH NETWORK**

**FY2016 Patient Experience Plan**

## I. PURPOSE:

The purpose of the system-wide Patient Experience Plan at the Eastern Connecticut Health Network is to improve the patient's experience throughout our organization by using a proactive approach, resulting in recognition as an organization of excellence in patient experience with a culture committed to promoting an optimal patient experience as a daily priority.

## II. OBJECTIVES:

A. To foster a culture of an exceptional patient experience through accountability, responsibility, and employee empowerment, excellence in communication and in providing the highest level of patient experience possible throughout our organization.

B. To strive for 5-STAR ratings related to Patient Experience through recognition, tracking of patient experience data, stories, and through the acknowledgement of need to put the patient's needs first.

C. To provide a standardized approach for meeting the needs of our patients related to the patient experience that focuses on processes and systems that allow for the maximum positive experience for all of our patients.

D. To initiate actions to reduce identified areas of patient dissatisfaction.

E. To improve the recognition and perception of patient experience within the organization and the communities we serve.

F. To establish a communication mechanism that provides for regular communication of our patient experience priority initiatives and outcomes both internally and externally.

G. To utilize a multidisciplinary forum to review and analyze events and data, disseminate information, and provide an avenue for individuals to bring concerns forward.

H. To disseminate the knowledge gained within the organization and in other health care organizations in order to promote changes in processes to improve patient experience.

I. To assure compliance with the patient needs outlined in HCAHPS questions and consider best practices, such as Press Ganey and Connecticut Hospital Association (CHA) Collaboratives that may address the patient experience.

J. To conduct annual proactive assessment related to patient experience and organizational goals.

K. To improve the patient experience by focusing on patient safety, quality, and satisfaction.

The Patient Experience Plan will provide a systematic, coordinated and continuous approach to the maintenance and improvement of the patient experience through the establishment of mechanisms that support effective responses to actual occurrences; ongoing proactive reduction in complaints and grievances; and integration of patient experience priorities into the new design and redesign of all relevant organization processes, functions, and services.

**EASTERN CONNECTICUT HEALTH NETWORK**

**FY2016 Patient Experience Plan**

As patient care, and therefore the maintenance and improvement of patient experience, is a coordinated and collaborative effort, the approach to optimal patient experience involves multiple departments and disciplines in establishing the plans, processes, and mechanisms that comprise the patient experience activities at Eastern Connecticut Health Network.

## III. SCOPE/COMPONENTS OF ACTIVITIES:

To provide ongoing assessment, using internal and external knowledge and experience to identify and enhance patient experiences throughout the organization. Patient experience information will be reviewed by the Patient Experience Steering Committee to prioritize organizational efforts as to the redesign of processes based on identified positive and negative patient experiences, and current HCAHPS data.

A. Perform Broad Spectrum Data Monitoring and Analysis: The creation of excellence in patient experience relies on identifying, reporting, tracking, and sharing current and potential problems, as well as successes and aggregate data collected and analyzed through multiple sources of reporting, which may include:

1. Incident reporting system: Feedback Module.
2. Daily Safety Huddle for review of system and individual patient experience concerns.
3. Word of mouth reporting/huddles.
4. Root Cause Analysis.
5. Press Ganey Surveys.
6. STAR Ratings.

B. Provide the Codification of Patient Experience Principles: The creation and revision of supporting policies and processes, including the associated education that clearly delineates how the organization will react to patient experience needs and responses.

1. Embed Patient Experience Habits and Behaviors throughout the organization.
2. Promote a Just Culture using the accountability algorithm to include patient experience.
3. Perform leadership, manager, and staff rounding with patients.
4. Enhance teamwork behaviors.
5. Improve the knowledge of patient experience practices with structure and resources in place.
6. Enhance clear, structured communication, including Huddles, Briefings, Debriefings, and Handoffs/SBAR (Situation, Background, Assessment, and Recommendation).
7. Survey the patient utilizing both electronic and paper surveys to include HCAHPS questions. Monitor results through CMS STAR Rating, Value-Based Purchasing programs, and monthly results provided through Press Ganey.
8. Spread best-practice across the system.

C. Provide a Staff-Centered Patient Experience Infrastructure: Create an excellent patient experience practice environment through the promotion of multidisciplinary participation that values staff ownership and engagement.

1. Patient Experience Steering Committee.
2. Patient Experience Action Teams.
3. Patient Experience Coaches.

4. Leadership, manager, and staff rounding; allowing for direct communication of patient experience concerns.
5. Best-practice resources/education as it relates to any patient experience endeavor. For example, communication to enhance best patient experience, etc.
6. Organization-wide training on patient experience habits and behaviors.

D. Enhance patient Experience-Focused Decision Support: Adopt criteria-based protocols and technological innovations, such as checklists and standardization to reduce variation, such as standardized communication between all care providers and patient (AIDET® program), etc.

E. Perform Retrospective Internal Assessment: Perform ongoing evaluation and re-evaluation of program and process changes utilizing proven metrics and benchmark data to monitor improvement, and to confirm the efficacy of actions taken and/or acknowledge initiatives that fail to produce the intended results.

1. Data from our Incident Reporting Information Systems (IRIS) Feedback Module, monthly/quarterly/yearly.
2. HCAHPS data, monthly.
3. STAR Ratings, quarterly.
4. Value-Based Purchasing Data.
5. Internal Dashboards.
6. Results of Press Ganey Surveys.
7. Patient Comments.
8. Patient Complaints and Grievances.

## IV. AUTHORITY AND ACCOUNTABILITY:

The Board of Trustees, via the Quality Improvement Council (QIC), delegates the responsibility, authority, and accountability for the coordination and oversight of the Patient Experience Program to the interdisciplinary patient Experience Steering Committee, which will be chaired by the Patient Experience Coordinator and/or Vice President of Quality and Safety. The Patient Experience Steering Committee is a subcommittee of the network's Quality Improvement Council. Patient Experience reports and meeting minutes will be submitted to the Quality Improvement Council. The Patient Experience Coordinator and/or the Vice President of Quality and Safety is responsible for the advancement of the ECHN Culture of Excellence in patient Experience through a strong clinical presence and administration of the Patient Experience Program on a day-to-day basis.

## V. PROGRAM CONFIDENTIALITY:

When the Patient Experience Steering Committee engages in a quality review to gather and review information relating to the care and treatment of a patient for the purpose of evaluating and improving the experience of health care rendered, it is considered protected under Connecticut State Statute 19a-17b.

## VI. COMMUNICATION PLAN:

Patient Experience relies on interactive and open communication through the exchange of ideas and information. Timely communication is expected between all committees and organizational groups responsible for patient experience; to include Safety, Quality, and Satisfaction. Patient Experience

Information will also be published regularly to provide communication of our patient experience priority initiatives and outcomes, both internally and externally.

## VII. ANNUAL REAPPRAISAL:

The Chair, with input from the Patient Experience Steering Committee, wil conduct an annual review of the Patient Experience Plan for evaluation of the program's effectiveness and to establish priorities for the next year. Recommendations will be forwarded to the appropriate committees or departments throughout the organization. The Patient Experience Plan is approved by administration, the medical staff, and the governing board.

## Patient Experience Steering Committee

**PURPOSE:**

Under the direction of the Patient Experience Coordinator and/or Vice President of Quality and Safety, the Patient Experience Steering Committee is charged with overall assessment, development, initiative implementation and evaluation of the Patient Experience Program and resulting data. They will analyze and track Press Ganey and HCAHPS data, audit hospital procedures and initiatives to enhance the patient experience, as well as develop and sustain a culture of excellence in patient experience.

**OBJECTIVES:**

- Assess the patient experience culture and identify areas in need of change to improve that culture.
- Receive patient satisfaction data from Press Ganey, CMS and other agencies. Review and act on this data to identify trends and/or opportunities for improvement. Assign responsibility for improvement and set timelines for action.
- Receive and review complaint and grievance information from the Patient Experience Coordinator, Quality Managers, or other sources related to patient experience.
- Review Press Ganey's best practices for a superior patient experience and lead the organization in full program development. Assign responsibility for monitoring ECHN's compliance with these requirements. Charter teams to improve areas of identified deficiency in performance.
- Use published information about patient experience in other organizations and evidenced based practice related to patient experience improvement as opportunities to apply "lessons learned" to appropriate ECHN systems and processes.
- Assist in the review and action planning related to patient experience working under the Patient Experience Plan and monitor the completion of and compliance with suggested action plans.
- Review and discuss all Press Ganey and HCAHPS data quarterly at a minimum to evaluate progress and identify trends.
- Inform ECHN leadership and Medical Staff about changes in requirements that may impact patient experience procedures and practices, and assure compliance with those regulations.
- Provide yearly review and approval of ECHN's Patient Experience Plan.
- Receive and act on reports from the following committees or areas on a scheduled and ad hoc basis:
  - Grievance Committee
    - Patient Experience-related complaints
  - Claims Committee Data that may be related to the patient experience.
  - Incident Reporting: Information gathered through the Feedback System
  - Patient Experience Action Teams
  - Physician Practices
    - Physician Patient Experience Coaches
  - Staff Concerns
    - Staff Membership on committees
    - Patient Experience Coaches
    - SVP and VP Rounding for Outcomes
  - Patient Concerns:
    - Leadership Rounding with Patients

  - Woodlake at Tolland
  - VNHSC
- Address any issues identified through Root Cause Analysis or committee reports that will require data monitoring. Ongoing reporting will be followed by the Patient Experience Steering Committee.
- Develop and support a non-punitive approach in the management of patient complaints and grievances. Focus will be placed on remedial actions rather than punitive actions taken.
- Sustain behaviors of an Accountable/Just Culture and Culture of Excellence in Patient Experience

The Patient Experience Committee shall meet at least ten (10) times per calendar year, or more often as deemed necessary by the chair.

**COMPOSITION:**

The committee will be chaired by the Patient Experience Coordinator and/or Vice President of Quality and Safety. Membership will include representation from Environment of Care, Patient Care Services, Communication, Medical Staff Leadership and Hospitalists, Quality , Human Resources, Lab, and additional departments as needed on an ad hoc basis.,

Initiated: 01/22/16

# ECHN RISK MANAGEMENT PROGRAM
# FY2016

## I. Purpose

The Risk Management Program seeks to promote the achievement of the goals of Eastern Connecticut Health Network through risk identification, evaluation and control; reducing the frequency and severity of adverse events thus minimizing loss and contributing to the delivery of quality healthcare within the organization. The Risk Management Plan is developed in conjunction with and is intended to compliment the Performance Improvement, Environmental and Patient Safety Plans, in accordance with the direction of the Board of Trustees.

## II. Definitions

**Risk management:** the process of making and carrying out decisions that will minimize the adverse effects of accidental losses upon an organization in an environment that is non-punitive. These types of risks are considered systemic opportunities for improvement.

**Enterprise Risk Management (ERM)**: provides a holistic structured framework that focuses on identifying, quantifying, prioritizing and eliminating the financial impact of a broad range of diverse risks in order to enhance organizational value. ERM is an enhancement to the risk management process.

## III. Objectives

A. To reduce/minimize risks in patient care that in turn, directly or indirectly, improves the quality of care delivered to patients;
B. To help maintain the financial integrity and survival of Eastern Connecticut Health Network through the control and mitigation of losses;
C. To maintain efficiency for all hospital services through the protection of personnel and property assets;
D. To enhance public trust in the health care provided by the hospital through the continuous improvement of services and performances;
E. To provide ongoing assessment to identify, prevent and mitigate patient safety occurrences.

## IV. Scope/Components of the ECHN Risk Management Program

A. Incident Reporting System
   1. All incident reports should be completed as close to the recognized event as possible and sent to Risk Management. The Director of Risk Management and/or designee will review the information contained in these reports and utilize this information for three purposes:
      a. Analyze the causes and recommend measures to prevent reoccurrence.
      b. Evaluation of the need to report the occurrence to the appropriate regulatory or accreditation agency.
      c. Review potential compensability.
   2. Trending of incident reports will be completed by Risk Management and will be reported to various committees and individual department directors.

B. Patient Complaint Program

1. Patient complaints are received by the Patient Relations Department from varying sources for investigation and resolution. When appropriate they are referred to ECHN Risk Management.
2. Patient complaints with risk or liability concerns are referred to ECHN Risk Management by Patient Relations for review for potential compensability and/or safety concerns.
3. Risk Management meets regularly with the Patient Representatives to review and track all relevant complaints/grievances, adhering to CMS guidelines.

C. Environment of Care Plan (EOC)

1. The Director of Risk Management and/or designee shall work collaboratively with the chair of the EOC Committee and others to ensure that there is open communication related to inspections of hospital departments deficiencies being reported, improvement plans are initiated and corrective actions are taken.
2. Inspections are conducted through varying sources including outside consultants per EOC plan.

D. Claims Management

1. Professional and general liability claims filed against ECHN are the responsibility of the Director of Risk Management and the Third Party Administrator (TPA). Trending and tracking of these claims are also the responsibility of the Director of Risk Management and are reported to the Claims Committee.
2. Claims filed by or against Eastern Connecticut Health Network are managed by Director of Risk Management and the Risk Management staff: (e.g. professional liability, general liability, workers' compensation, property and automobile) along with TPA.
3. Settlement Authority is made in conjunction with the Sr. Vice President of Finance and Sr. Vice President of Patient Care Services, with input from Claims Committee members and outside legal recommendations.

E. Risk Financing

The Director of Risk Management will provide input and feedback to the Senior VP of Patient Care Services & Chief Nursing Officer and Sr. VP Finance of ECHN when determining the most appropriate retention/deductible levels and types and limits of insurance based on loss history and cash flow considerations.

F. Contract Review

Appropriate Staff works in conjunction with legal counsel to review and/or provide for outside review of contracts to determine:

1. If all appropriate action has been taken to provide adequate protection from claims arising out of the actions/liability of others.
2. That parties contracting with the hospital have and provide proof of adequate liability insurance coverage.
3. That the hospital is adequately covered for activities in which it is involved.

4. Whenever possible, the hospital shall seek to transfer liability contractually and/or be held harmless in contractual arrangements.

G. Education and Training

The Director of Risk Management will collaborate with the Administrative Team and Managers/Directors to identify and coordinate training and continuing education needs of hospital staff. Programs and materials will be provided through both internal and external sources. Departmental requests for specific programs can be submitted directly to the Risk Management Department.

H. Interaction with Medical Staff

1. The Director of Risk Management collaborates with the Medical Staff to actively participate in the ECHN Risk Management Program by helping to identify high-risk areas of operation and the development of high-risk indicators to be used in Medical Staff and departmental monitoring and evaluation activities
2. The Director of Risk Management will facilitate the participation of the Medical Staff in the correction of identified problems concerning clinical patient care and safety, including designing programs to reduce risk in the clinical aspects of patient care and safety.
3. The Director of Risk Management works with the members of the Medical Staff to educate about the importance of reporting any adverse clinical outcomes to ECHN Risk Management upon their occurrence. This allows for immediate investigation and evaluation of the outcome as to the potential compensability and/or investigation and evaluation. Any clinical outcome determined to require continuing quality improvement follow-up would be referred to the Vice President of Quality and Safety for review and referral, and as appropriate, to the Department Chair and Senior Vice President of Medical Affairs.

I. Integration with Quality and Patient Safety

1. ECHN Risk Management will work with Quality and Patient Safety Staff to coordinate the following activities:
   - Information sharing for opportunities for improvement;
   - Problem intervention to reduce or eliminate reoccurrences;
   - Continuous monitoring and tracking systems;
   - Data analysis and partnership efforts between ECHN Risk Management, Patient Safety and Performance Improvement on quality opportunities;
   - Staff education.
2. Participates in patient safety activities/initiatives to strive for zero defects (occurrences) of patient safety risks, and to provide a standardized approach that focuses on process and systems in minimizing risk to the institution.
3. A cross referral process is present for the reporting of quality issues from the Quality Department to Risk Management. Any activities which are considered Sentinel Events and are reported following the Sentinel Event Policy and require a root cause analysis process to be implemented with the active participation of Patient Safety, Risk and Performance Improvement and all others deemed appropriate for the most effective resolution of the event.

4. The Risk Management Department will have representation on the Quality Improvement Council, Patient Safety Committee, and other committess that are deemed necessary for the improvement of patient care. A member of Quality Department will have representation on the Claims Committee.
5. Risk management related data will be reported to the Patient Safety Committee and the Claims Committee. Data can also be provided to other commitees upon request.
6. Risk Management will cooperate with the Quality Department in exchanging information in order to improve patient care and safety.
7. Events must be reported to Risk Management immediately upon awareness, according to the Risk Management Occurrence Reporting System CAP #330 and Medical Device Occurrence Resulting in Injury, Illness or Death CAP #331. ECHN Risk Management will participate as appropriate with the Quality Department in Root Cause Analysis for all events determined to meet the requirements of the Sentinel Event Policy CAP # 300.01 & 300.02.
8. Risk Management is involved in quality improvement activities that are deemed necessary for the improvement of patient care. Risk Management will collaborate with the Quality Department and Administrative Director of Environment of Care on issues that should be communicated to the QI Council and the Board of Trustees.

J. External Reporting
1. The Director of Risk Management will collaborate with members of the Quality and Safety Department, as necessary, regarding adverse event reporting. The Vice President of Quality and Safety is responsible for reporting events to the State of Connecticut Department of Public Health.
2. The Director of Risk Management will collaborate with members of the Quality and Safety Department, as necessary, regarding the Sentinel Event Policy and considering reports to the Joint Commission.

## V. Authority and Accountability

A. The Director of Risk Management is accountable for professional and general liability claims and lawsuits filed against the hospital. Claims management activities are outlined in the Claims Handling Standards and Guidelines. They include, but are not limited to, these general steps:
1. Investigation and reporting to TPA,
2. Coordination with insurers and defense counsel to assist with claims management and pretrial processes, and
3. Development of defense strategies, as well as participation in settlement decisions.

B. In all instances, ECHN Risk Management uses the following decision making processes:
1. Risk Identification
2. Risk Analysis
3. Risk Treatment – including risk control and risk financing
4. Evaluation of risk treatment strategies.

# FY2015 Performance Improvement Accomplishments and FY2016 Performance Improvement Goals

| Objective | FY2015 Goal | Accomplishments Goals |
|---|---|---|
| A. In order to increase the probability of desired patient outcomes by assessing and improving those governance, managerial, clinical and support processes that most affect such outcomes, and by providing an ongoing process to improve care, identify and resolve issues. | 1. Develop a standardized plan of care for surgical patients. Focus on the prevention of pneumonia/respiratory failure, DVT, SSI, and pain control. Add total hip and knee repair to readmission report. | 1. Standardized plan for surgical patients – Have created a standardized post op order set that is in final review. Lit search being done before finalization. Recommended guidelines for care includes preop, intra op and post op. Plan includes prevention of pneumonia/respiratory failure, DVT, SSI (standardized anti biotics), and pain control. Document available.<br><br>2. SSI – Committee formed to address SSI. Many initiatives implemented. Document available.<br><br>3. Total hip and knee repair was added to the readmission report and are being followed.<br><br>**2016 Goal**: Focus on decreasing Colon SSIs – will work with CHA to develop and implement a statewide plan. ECHN SSI group will meet regularly to analyze all SSIs and develop and initiate plan to decrease SSIs. Initial analysis available. Goal: Decrease SSI Rate overall by >10% in 2016 Work on decreasing C-Diff rates. Will work with CHA to develop and implement a state wide plan. C-Diff workgroup formed. Has already begun initiatives. Document available. Goal: Decrease SSI rate by >10% in 2016. |
| B. Ensure a proactive integrated patient safety program throughout the hospital with a non-punitive approach to identifying risks to patient safety and reducing factors that contribute to unanticipated adverse events and outcomes. | 1. Work to ensure sustainability of HRO efforts. Continue to build 'rounding to influence' process with leaders. Involve medical staff Safety Coaches/support. Continue to train all new employees and medical staff via orientation class for HRO. | Classes are offered monthly to all new hires and quarterly to all Active Medical staff and Allied Health Professionals. We have added education in the "Safety Absolute: 2 Patient Identifiers" for all newly-hired staff, as well as all Active Medical Staff and Allied Health Professionals. Completion rates are ongoing as new staff is continuously added. End of year 2015 completion rates for HRO training are: Total Medical Staff = 95.2%, Overall Compliance including All ECHN entities = 95.5%. These numbers include new employees who may not have yet gone through training. Training is continuous for all staff and physicians.<br><br>Leaders are on the unit rounding weekly in all clinical areas to ensure patient satisfaction as well as safety behavior compliance.<br><br>**2016 Goal**: Continuous training of all newly-hired staff and physicians in HRO – "Patient Safety Starts with Me" Program. Continuous training also in the Safety Absolute: 2 patient Identifiers. Maintain continuous compliance rate of 95% or higher. Continuation of Daily Safety Huddle, Safety Coach |

| Objective | FY2015 Goal | Accomplishments/Goals |
|---|---|---|
| | | committee and Patient Safety Committee through 2016. Addition of Rounding for Outcomes Daily by SVP and VPs which focuses on Safety, Quality and Satisfaction. Creation of Safety, Quality and Satisfaction Boards on inpatient units and ancillary areas to promote and improve the patient experience. HCAHPS scores in identified target areas of Communication with Nurses and Communication with Physicians will reach and maintain target goal of 30% of PG Data base.<br><br>Begin Safety Coach for Physician Program with CMO. |
| C. Establish priorities for performance improvement activities using information related to unanticipated adverse events, focusing on activities with the greatest potential impact on patient outcomes. | Focus on reducing hospital acquired infections. Use team approach to evaluate catheter associated urinary tract infections and central line infections. | Four groups formed – CLABSI, CAUTI, SSI and C-Diff. Teams met Goals developed along with action planning items. Action items implemented with results of significant decrease in CLABSI and CAUTI rates. ICU CAUTI rates for 2015 decreased by 100% at RGH and by 80% at MMH. CLABSI rate at RGH ICU remains at zero since CY2013 – Qtr. 1 through Dec 31, 2015. MMH CLABSI rate decreased by 50% in 2015.<br><br>Hospital acquired pressure ulcers (Stage 3, 4, and unstageable) were down significantly at both facilities. MMH saw a 75% decrease and RGH saw a 100% decrease.<br><br>**2016 Goal**: Maintain and continue work on keeping CLABSI and CAUTI rates down. Goal is Zero for ICU and Med Surg areas. Standardize ordering process for Central Line Placement. Vascular Access Team will meet quarterly to maintain gains in decreasing CLABSI rates. Educate all staff regarding standardize process for catheter insertion will go to all units in 2016. Continue to watch data to ensure maintenance of low or no CAUTI incidences. Goal is Zero CAUTIS in ICU and med surg. SSI group will continue to meet; will redouble efforts and will join CHA initiative for colorectal SSI. Goal is to decrease SSIs overall by >10% in 2016. C-Diff Team continues to meet and will join CHA initiative to decrease C-Diff Rates in 2016. Goal is to Decrease C-Diff Rates by >10% in 2016.<br><br>Continue to decrease stage 3, 4, and unstageable hospital acquired pressure ulcers. |
| D. Carry out and communicate improvement activities | Communicate Agency for Healthcare Research & Quality (AHRQ) data to key | Results of the AHRQ Patient Safety Culture Survey were communicated to the Board, Systems Team, Presidents Staff, Patient Safety Committee, |

| Objective | FY2015 Goal | Accomplishments/Goals |
|---|---|---|
| through established channels to appropriate leaders and members of the hospital. | audiences. Continue to share SSER. | Clinical Council, Clinical Executive Committee. Various leaders were shown how to obtain their unit's results for distribution to their individual units. SVPs and VPs worked with leaders to ensure they reviewed and addressed their results. Reporting results occurred over several months in 2015. Results of the AHRQ study were excellent, with improvements noted in almost every category and percentile in both hospitals.<br><br>SSER shared in many venues through 2015. SSER decreased by 69.3% at MMH and 75.7% at RGH from peak rate by November 30, 2015.<br>**2016 Goal**: Effective Communication and rollout of Targeted and Comprehensive Patient Experience Program and activities and HCAHPS data to all venues throughout ECHN. Continue to follow SSER Rate monthly, maintain low rate with overall goal is always aim for zero. Continue to share SSER in various meetings and venues monthly. |
| E. We ensure that new or modified processes are designed well. | Ensure Meaningful Use process for Quality indicators accurately reflects care provided to patients. Ensure patient Portal runs well and patients begin to access it post discharge. | IT and Quality have worked on E-CQM to ensure electronic data is an accurate reflection of actual patient care. This process has improved and is more accurate because of changes placed in the documentation process. Has improved the accuracy of abstracted data vs electronic reporting of data.<br><br>Patient Portal is running well and being utilized at a good rate by patients. Usage is up to 6% and patients are responding well to using the patient portal. This year CMS changes to only one access needed monthly however provisioning continues with percent provisioned before they leave hospital continuing to be followed.<br><br>**2016 Goal:** Quality will continue to work with IT to ensure electronic data reporting matches abstracted data as closely as possible. Provisioning of patients for Portal will continue to achieve required percentage of 50% of all discharged patients.<br><br>New process for standard process for Central Line Insertion will be in place and communicated to all providers. Policy and Guidelines will be developed and communicated to ensure a standard process. |
| F. Ensure staff competency. This includes performance-based evaluations, ongoing | Continue PSSWM education to all uncompleted groups and to all new employees. ECHN training will include | PSSWM education is given to all new employees and statistics are watched monthly to ensure that there is complete compliance. Compliance rates are: Total Medical Staff = 95.2%, Overall Compliance including all ECHN |

| Objective | FY2015 Goal | Accomplishments/Goals |
|---|---|---|
| education and training to maintain and improve competency. | WAT staff and VNHSC staff. Follow CHA directives when establishing Safety Absolutes (red rules). | entities = 95.5%. Safety Absolute went live hospital wide and is continuous to all new employees. Completion percentages for end of year 2015 are: Staff: 98.32%, Leadership: 100.00%<br><br>**2016 Goal**: Education on fall prevention via Health Stream will be part of competencies this year – expect 100% compliance and resulting decrease in fall rates especially falls with serious injury – Goal: Zero falls with serious injury.<br><br>Education to all clinical areas related to standardized process for catheter insertion to prevent CAUTI – Goal is zero CAUTI'S or lowest rate possible.<br><br>Education to all providers related to standard method for Central Line ordering and insertion to decrease CLABSI rates – Goal is zero or lowest rate possible.<br><br>Education to organization to target needed areas related to the patient experience. Target HCAHPS are Nurse Communication and Physician Communication. Goal is to be at 30% of database. |
| G. Ensure Medical Staff credentialing activities comply with Federal, State, and TJC regulations, as well as the Medical Staff Bylaws. | Continue to ensure Medical Staff credentialing activities are in compliance with Federal, State, and TJC regulation. Will complete Active Medical Staff HRO training by end of year. | Medical Staff Credentialing activities are in compliance as evidenced by successful surveys by TJC and DPH in 2015. All Active Medical Staff and Allied Health Professionals were trained in HRO in 2015 with medical staff holding the line and insisting on 100% compliance.<br><br>**2016 Goal**: Continue to work with Medical Staff Credentialing to ensure complete compliance with regulations. Continue to hold classes and educate all new practitioners who come in to ECHN on HRO Training as well as the Safety Absolute and safety expectations. |
| H. We ensure that processes measured on a continuing basis include those that affect a large percentage of patients, those that place patients at serious risk if not performed well, or those that are performed when not | Create graphic display of Hospital Acquired Infection data to prepare for changes in CMS Value-Based Purchasing. | Graphic displays of HAI data were created and displayed in many venues along with explanations as well as action items for improvement.<br><br>**2016 Goal:** Continue to improve on displays of infection control data graphs. Check for accuracy each quarter with CMS reports. Bring HAI data to all venues with explanations. Work on separating out numbers for Colo, hyst, total knees and total hip data for improved accuracy of data collection and reporting. |

## FY2015 Performance Improvement Accomplishments and FY2016 Performance Improvement Goals

| Objective | FY2015 Goal | Accomplishments Goals |
|---|---|---|
| indicated, not performed when indicated, or are likely to be problem prone. | | |
| I. Ensure data is collected & analyzed related to patient needs and expectations. Include family & staff opinions of risk and when applicable the effectiveness of pain management. | Aggregate results of AHRQ Patient Safety Survey. Share with staff and Leaders. Use results to further improve. | Results of AHRQ survey was aggregated and reported throughout the organization. All data was shared and plans created for further improvement<br><br>**2016 Goal:** Data Collection through HCAHPS is widely publicized to all groups for transparency as well as to evaluate improvement related to initiatives in place or being put into place. Patient Experience Boards on all units will have individual data related to patient experience to help staff and management stay current on data and initiatives and drive toward improvement. |
| J. Ensure the appropriate use and effectiveness of services for the provision of patient care and treatment obtained through contract relationships. | Review contracts to ensure quality of contracted service has been evaluated by user. Review significant equipment contracts for quality | All contracts reviewed by quality manager with changes and improvements made especially to quality metrics needed for each contract. As every contract comes due, they are being reviewed for their quality metrics to ensure the proper quality metric is incorporated into policy. Examples: Wound Care - Healogics, Lithotripsy, etc.<br><br>**2016 Goal:** Quality will continue to review each patient care contract as it comes up for renewal to ensure correct and accurate quality metrics are included in the contract and are being followed with appropriate data submitted. Quality is working with Legal to ensure this process occurs consistently and is followed. |

**Subject:** UPDATED - ECHN Monthly Financial Statistics Reports

Hi Steven,

Attached are the monthly financial statistics reports for the months of July, August and September FY 15 and FY14 and October, November, December and January FY16 and FY15 for Manchester Memorial Hospital, Rockville General Hospital and the Eastern Connecticut Health Network.

**A formula error was found in Section B. Liquidity and the attached reports reflect the correction.**

These reports were requested in the Eastern Connecticut Health Network, Inc. – Proposed Asset Purchase by Prospect Medical Holdings, Inc. – OHCA Docket No. 15-31216-486 and Attorney General Docket No. 15-486-01.
The reports respond to Item #50 (Page 10 of the request for information in the application for approval on August 6, 2015).

I apologize for the late notice but please place these reports in the docket if possible.

Thank you,

Mary

# OUR CONCERN FOR A VOICE IN HOSPITAL DECISIONS

This whole process of transfering ownership of ECHN has raised questions in the minds of some of us who until now assumed that the top priority in our local hospitals and related service outposts was being given to meeting our health needs. Now we find out that apparently those providing direct services to us may, in some cases, been laid off so that a few very generous salaries could be paid. That doesn't feel like concern for our health care is receiving top priority in the decisions being made. And now, with the transition to a for-profit operation, there is yet another priority which threatens to rise above any concern for our health care, that of a profit for the new owners.

We would like to propose that an independent ombudsman be designed into this new organizational structure who might be empowered to inform and represent those being served, individually and collectively. That could help to lessen our fears.

There are many examples of such positions. Universities like Texas and Arizona have such positions for their students. States like California, North Carolina, Wyoming, and Mississippi (and we assume others) have instituted such positions in support of their senior citizens in long term health care. New Jersey just created such a position for families dealing with special-ed issues. Oregon has a program for foster children and their foster families. There are ample models to draw from.

Eventually, one would assume that the State of Connecticut would institute such a position for its health care providers, but until it does, we would strongly suggest that such an independent office (and <u>independent</u> is a very important part of this) be put in place now for us even as this transfer is taking place.

South United Methodist Church

A Union of Professionals
AFT Healthcare

Testimony of
**John Brady, RN**
**Executive Vice President, AFT Connecticut, AFL-CIO**
Certificate of Need Determination Letter Public Hearing
Manchester Country Club
March 29, 2016

Good afternoon. My name is John Brady. I am a Registered Nurse and Executive Vice President of AFT Connecticut, a diverse union of nearly 30,000 public and private sector members. We are proud to represent approximately 700 members in four bargaining units at Manchester and Rockville Hospitals. Thank you for the opportunity to speak to you about ECHN's proposal to convert to a for-profit healthcare system by transferring assets to Prospect Medical Holdings, Inc.

AFT Connecticut recognizes that the healthcare landscape is quickly changing and that ECHN has decided that the only path to long term financial stability is to abandon its non-profit status and partner with for-profit healthcare corporations. We recognize that we cannot stop this from happening, but as healthcare professionals with a responsibility to advocate for our patients, their families and our communities, we are concerned about preserving patient access to high quality care and protecting the commitment to community service programs that we have come to expect at ECHN. We want our ECHN hospitals to continue to be responsive to these concerns and provide access to all, not just to those who can afford to pay for profitable services. For these reasons, we strongly urge all actors in this proposed transaction to act openly, honestly and transparently by engaging stakeholders, not shareholders.

When ECHN executives decided to pursue a for-profit partnership with Tenet Healthcare, Inc. in 2014, they initiated substantive discussions with union representatives about their intentions. This process allowed for a frank labor-management dialogue which allowed the fundamental needs and interests of each party to be clarified and communicated at the earliest stages of the process. Ultimately that process resulted in a number of significant changes in collective bargaining agreements and provided an important line of communication between ECHN and its employees throughout the intended transition. Those changes to the collective bargaining agreements will continue, but we have concerns because Prospect has, at best, a checked history in terms of a working relationship with its union partners in Rhode Island.

It is AFT Connecticut's hope that ECHN and its for-profit partners will back away from simply threatening closure and move instead toward responsiveness and accountability to community needs and concerns. We urge the Office of Healthcare Access to place conditions on this acquisition that protect access and quality of care. There are a number of collaborative ways in which this important work can be done.

***Community Oversight Board***

Similar to the arrangement created for Sharon Hospital, we urge the Attorney General and the Office of Health Care Access to establish a community oversight board with members appointed by elected policy leaders who represent all stakeholders, including direct patient caregivers. If ECHN and its partners will not establish such a board voluntarily, we urge the Attorney General and the Office of Healthcare Access to require it as a condition of the conversion.

***Post-Transfer Compliance Reporter***

Public Act 15-146 requires the Office of Health Care Access to hire an independent post-transfer compliance reporter for approved conversion applications filed after December 1, 2015. Though law does not require them to do so in this case, we strongly urge the Office of Health Care Access to require a post-transfer compliance reporter be appointed to ensure that ECHN and its partners live up to the terms of the approved conversion and keep the promises they have made to the community. A compliance reporter would produce a baseline report on services, staffing levels, uncompensated care, community programs, employee benefits and other measures at the time of conversion. That way, when performance audits are conducted, cuts made after the conversion could be easily identified and their impacts monitored. Establishing an independent reporter would ultimately facilitate dialogue between the hospital, patients, communities, the Attorney General and the Department of Public Health, creating a mechanism for success. If ECHN and its partners will not create a post-transfer compliance reporter voluntarily, we urge the Attorney General and the Office of Healthcare Access to require it as a condition of the conversion.

***Charitable Care/Community Benefits***

Public Act 15-146 requires the post-transfer compliance reporter to report to the Office of Health Care Access the level of community benefit and uncompensated care provided by hospitals who have applied for conversion after December 1 2015. Though the law does not require it because their application was filed before December 1, 2015, we call on ECHN and its partners to follow the spirit of Public Act 15-146 and establish a detailed, definitive written community benefits agreement. If they fail to do so, we urge the Attorney General and the Office of Healthcare Access to require it as a condition of the conversion.

In conclusion, there is much ECHN and its corporate partners can do to protect the communities they serve as they attempt to convert from non-profit to for-profit status. We ask that they proactively address the issues outlined in this testimony and seize the opportunity to establish true partnerships with all stakeholders. It is only by working collaboratively that they will succeed. Thank you.

 From Joe Talley 860-646-1030 (Tyler) 

# Competent, but not daring

## Hospitals run by ECHN's new suitor seen as well-run but not interested in treating sickest cases

By Don Michak
Journal Inquirer

Prospect Medical Holdings, the California-company now expected to acquire Eastern Connecticut Health Network, is a for-profit business that scoops up hospitals in financial troubles — just like Tenet Healthcare, the Texas-based corporation that last winter left ECHN at the buyout altar.

Both offer their targets access to new capital, agree to assume debt and pension obligations, and make qualified pledges to maintain services and employment levels and to keep facilities open for several years.

But there are some big differences between ECHN's past and latest suitors, with the most obvious being Tenet's billion-dollar record of settling fraud, overbilling, kickback, and other allegations by its biggest customer, the federal government.

Prospect has not faced any similar allegations, although its San Antonio, Texas, hospital system and one of the two Rhode Island hospitals it purchased last year are among the hundreds of U.S. hospitals penalized by Medicare for high rates of "hospital-acquired conditions" — avoidable mistakes that harm patients.

Prospect, with just over 2,000 employees, also has been merely a regional player in the national health care game. It currently owns 14 hospitals in three states, compared to Tenet's 80 hospitals in 14 states.

Moreover, Prospect has been in the hospital business for only about a decade. The company, which in 1996 began acquiring physician organizations in California, bought a minority interest in its first hospital there in 2005. It bought four more California hospitals in 2007 and two others in Texas in 2012 and 2013.

Prospect in 2012 also announced plans to buy Raritan Medical Center in Perth Amboy, New Jersey, but that deal fell apart when Raritan decided instead to merge with an in-state nonprofit hospital system.

Undeterred, the company in 2014 signed a "definitive partnership agreement" with another nonprofit facility in New Jersey, East Orange General Hospital, under which it would assume ownership and make $84 million in operational and capital commitments. That deal is now under review by the state's health department and attorney general.

Prospect last year also formed a joint venture with CharterCare Health Partners in Rhode Island, owner of the 220-bed Roger Williams Medical Center in Providence and the 278-bed Our Lady of Fatima Hospital in North Providence. The company paid about $45 million for an 85 percent ownership stake, with most of the money going to pay off debt and pension funding. It also promised to invest $95 million over four years, preserve jobs, and maintain all services for a five-year period after the deal is formalized.

In Connecticut, Prospect is poised to buy not only ECHN and its Manchester Memorial and Rockville General hospitals, but also Waterbury Hospital, which like ECHN had been expected to be bought by Tenet.

Prospect now also is reported to be among the possible new suitors for the nonprofit Daughters of Charity Health System, the Catholic owner of six northern California hospitals whose $843 million buyout deal with the for-profit Prime Healthcare Services recently collapsed, according to an industry publication, Healthcare Finance News.

Prospect, which is incorporated in Delaware, is a holding company essentially owned by a Los Angeles-based leveraged-buyout firm, Leonard Green & Partners, through a corporate parent, Ivy Intermediate Holdings Inc. Prospect is led by a buyout industry veteran, Samuel S. Lee.

The privately held company doesn't file reports with federal securities regulators that would describe its financial condition, identify its principal stockholders, and disclose its executives' compensation packages.

But the decision issued last year by the director of Rhode Island's Health Department approving Prospect's takeover of the Providence-area hospitals provides some critical details about the company's business model, its financial status, and the quality of its care.

The 87-page document written by Dr. Michael Fine said that Prospect's purchase of 14 physician organizations in its first decade provided it with "a substantial concentration of HMO enrollees."

Fine, who has since retired, said the company then "used its community hospitals to facilitate growth" at its biggest hospital — Brotman Medical Center, now called Southern California Hospital at Culver City — and "used its medical group enrollment to drive business to its hospital facilities."

Fine added that Prospect also "leveraged its medical groups to enhance payor diversification" and "expanded its HMO contracts by offering a combined hospital-physician provider solution."

Prospect in 2005 had bought the 420-bed Brotman hospital, together with a group of hospital physicians and private investors, from a Tenet Healthcare subsidiary for $27 million, the Los Angeles Times reported.

Faced two years later with an annual loss of $12 million, the hospital filed for bankruptcy protection. Prospect led the reorganization of the hospital, increasing its ownership from 33 percent to 72 percent.

Fine wrote that that during Prospect's "six years of ownership of hospitals," the company has had "success in operating hospitals that had financial difficulties" and that its facilities "enjoy a good reputation for delivery of quality care and service to the under-served."

In a document appended to the decision, a consultant reported that Prospect's earnings before interest, taxes, depreciation, and amortization ranged between 8.9 percent and 13.8 percent between 2010 and 2013, indicating that it could "service existing debt and make routine and strategic investments."

Prospect intended to pay for the Rhode Island deal with cash generated from operations, the consultant added, including $86 million in cash and equivalents, and the company had a $60 million "revolving credit facility."

The consultant also found that Prospect used more debt to finance assets than similar publicly traded companies. And he reported that the company had a deficit in stockholders' equity because of payments made to its corporate parent of $88 million in 2012 and $100 million in 2013, although the company had said it had no intention to make additional "distributions."

In another appended report, a second consultant who reviewed "quality" issues at Prospect described all Prospect's hospitals as "community hospitals, non-academic" with "limited beds and services."

"They rely on hubs in the southern California or Texas regions, none of which they own, to take care of sicker patients who require more complex care," she wrote, adding that as a result Prospect doesn't have to pay for maintaining the more complex facilities.

The medical consultant also reported that she found no "citations of fraud or abuse or any criminal penalties" against Prospect hospitals, and that in the grades handed out by companies including U.S. News, Consumer Reports, and Leapfrog, all the facilities "fared similarly, with C the most common grade."

Meanwhile, Fine disclosed that Prospect had "never been required to undertake" or had "never undertaken" health needs assessments or equivalent studies of the health needs of residents in the communities where it operates. Such studies are required of nonprofit hospitals under the Affordable Care Act, and failure to meet that requirement can result in a $50,000 excise tax and possible revocation of tax-exempt status.

The official also wrote that Prospect's business model and record "do not provide any indication that it will improve hospital care affordability in its service area."

Prospect, Fine added, "will not be seeking to provide essential but under-reimbursed services to its service population but will be looking for services that generate higher margins and revenue growth."

He said the point wasn't that he was critical of the company's business model, "but merely that the business model must be evaluated with regard to its impact on affordable care statewide."

**OHCA HEARINGS - EXHIBIT AND LATE FILE FORM**

Applicants: Eastern Connecticut Health Network

DN: 15-32016-486 and 15-486-01

Hearing Dates: March 29, 2016

Time: 2:00 p.m.

Proposal: Eastern Connecticut Health Network, Inc. ("ECHN"), and Prospect Medical Holdings, Inc. ("PMH"), are proposing the purchase of substantially all of the assets of ECHN by PMH. Pursuant to the terms of the proposed Asset Purchase Agreement, PMH will pay either $105,000,000 or $115,000,000 for the assets of ECHN, subject to certain adjustments. In addition, PMH will commit to spend not less than $75,000,000 on capital items for the hospitals and service areas of Manchester Memorial Hospital and Rockville General Hospital, over five years.

STATE OF CONNECTICUT

DEPARTMENT OF PUBLIC HEALTH

OFFICE OF HEALTH CARE ACCESS

# EASTERN CONNECTICUT HEALTH NETWORK, INC. (ECHN) AND PROSPECT MEDICAL HOLDINGS, INC. (PMH)

## PURCHASE ECHN ASSETS BY PMH

DOCKET NO. 15-32016-486 AND 15-486-01

MARCH 29, 2016

2:00 P.M.

MANCHESTER COUNTRY CLUB
305 SOUTH MAIN
MANCHESTER, CONNECTICUT

POST REPORTING SERVICE
HAMDEN, CT (800) 262-4102

. . .Verbatim proceedings of a hearing before the State of Connecticut, Department of Public Health, Office of Health Care Access, in the matter of Eastern Connecticut Health Network, Inc. (ECHN) and Prospect Medical Holdings, Inc. (PMH), Purchase ECHN Assets by PMH, held at the Manchester Country Club, 305 South Main, Manchester, Connecticut, on March 29, 2016 at 2:00 p.m. . . .

HEARING OFFICER KEVIN HANSTED: Good afternoon, everyone. This public hearing before the Office of the Attorney General and Office of Health Care Access, identified by Docket Nos. 15-32016-486 and 15-486-01-CON, is being held on March 29, 2016 to consider Eastern Connecticut Health Network and Prospect Medical Holdings, Inc. application for the purchase of the assets of Eastern Connecticut Health Network by Prospect Medical Holdings.

This hearing is part of the procedure under what is commonly referred to as the Conversion Statute, which requires the Commissioner of the Department of Public Health and the Attorney General to

evaluate any proposal, which would convert a non-profit Connecticut hospital to a for-profit entity.

For OHCA's purposes, this public hearing is being held pursuant to Connecticut General Statutes, Section 19a-639a and 19a-486e, and will be conducted as a contested case, in accordance with the provisions of Chapter 54 of the Connecticut General Statutes.

My name is Kevin Hansted, and I have been designated to serve as the Hearing Officer for the Office of Health Care Access in this matter.

The staff members assigned to this case are Kimberly Martone, Director of Operations, Steven Lazarus and Carmen Cotto. The hearing is being recorded by Post Reporting Services.

OHCA will make its determination on this application pursuant to Sections 19a-486d and 19a-639 of the Connecticut General Statutes.

Eastern Connecticut Health Network and Prospect Medical Holdings, Inc. have been designated as parties in this proceeding.

MR. PERRY ZINN ROWTHORN: Good afternoon. My name is Perry Zinn Rowthorn. I'm the Deputy Attorney General for the State of Connecticut. I've been designated the Hearing Officer in this matter by Attorney

General George Jepsen.

I want to thank the Applicants, who are here, the witnesses, any public officials we may hear from, and a special thank you to the members of the public, who are here today.

We recognize that this transaction is important to your community, and it's important to all of the 19 communities that ECHN serves. That's why we're here, and your presence here underscores the importance of this transaction in our review.

We're conducting this hearing jointly with OHCA, but the Attorney General has a different role in reviewing the transaction, a different focus and different criteria, and I want to say a few words about that before we get into the hearing.

The Attorney General's role is defined and limited by the Conversion Act, the statute that Attorney Hansted referred to, Section 19a-486.

That Conversion Act reflects the Attorney General's traditional role in protecting the public interest and charitable assets and insuring that monies and properties committed to a charitable purpose are safeguarded and used appropriately.

Non-profit hospitals and hospital systems,

like ECHN, hold their assets for essentially a charitable purpose, providing health care, and not unlike for-profit systems generating profits for shareholders or owners.

The administrators of a non-profit hospital are stewards of its charitable assets with a responsibility to take good care of those assets.

The law does not prohibit hospitals, non-profit hospitals, from converting to for-profit status. When one seeks to do so, as here, the Attorney General's job is to ensure that the non-profit hospital is meeting its obligations of care for charitable assets.

We make sure three things, that the process leading to the sale was responsible, we look at where hospital -- were the hospital administrators careful in deciding to sell and choosing a buyer and negotiating the transaction?

We look at the terms of the sale. Are they fair? Will the hospital system get fair market value for its assets? And we look at the proceeds of the sale. Will they continue to be used for charitable health-related purposes?

Those proceeds remain charitable assets, and we need to ensure that the assets of the sale are protected from being used for the for-profit making

purposes of the new hospital system.

Because the Attorney General must remain focused throughout on the charitable assets, his review and our decision for the most part does not focus on the running of the for-profit hospital system after the transaction.

Issues relating to the operation of the new hospital entity, as it relates to access to health care services, are within OHCA's purview.

Today's hearing is a very important part, but just one part of a review that has been ongoing for months. We'll take testimony and evidence, and we'll hear public input today. We'll ask some questions.

Don't assume if we don't ask a question on a topic that that topic is not important to us. Before today, we have received and reviewed thousands of pages of documents, and we've asked questions and received answers in written form.

All of those materials, by the way, are available for your review on the Attorney General's website, www.ct.gov/ag.

The public's input is important to our review. All the information we receive today and in the hearing we'll hold on this transaction tomorrow in

Vernon, including all the public comments, will become part of the official record of our review.

We'll do our best to accommodate everybody, who wants to speak. We'll also take comments in writing, and those comments will also be included in the official record.

We have sheets at the door that you probably saw when you came in to sign up if you want to speak. We urge you to do that, and we're anxious to hear your commentary.

You can also take sheets. We have instruction sheets at the table for your own review or to give to friends or acquaintances, who may wish to be heard on this transaction, but couldn't be here today.

We are on track to review, to complete this review and issue our decision as early as June 10th of this year. I want to say a word about what that decision might entail.

Under our statute, the Attorney General either must approve the transaction as it is, deny it, or approve it with conditions, and those conditions for our purposes would relate to the purpose of the Conversion Act. That is, they would relate to the Attorney General's focus on protection of charitable assets.

This is a joint hearing. Kevin and I are going to work together to move this along to cover as much business as we can. You can assume that if either of us makes a ruling, that unless we state otherwise, that ruling will apply for both offices, and you can assume that, if either of us asks a question, because we have a joint record, that the question and answer will be applicable in both of our reviews and records.

I'll talk a little bit about how we see this proceeding going forward today. We're going to hear first the Applicant's Direct testimony. Next, OHCA will ask questions. To the extent that we have additional questions after OHCA's, we'll ask questions, then we'll have opportunity for public comment, and then opportunity for closing remarks.

Before I turn it back over to Kevin, who has got some additional important business to discuss, I want to introduce the Attorney General's staff, who is here with me today.

Immediately to my left is Assistant Attorney General Henry Salton, who is providing legal advice to the Attorney General and to OHCA.

Next to him is Assistant Attorney General Gary Hawes, who is coordinating this review for our

office. Soon to be with us is paralegal specialist Cheryl Turner, who has returned to our office to get our name plates, because we see that OHCA has theirs, and we're anonymous to this point at least, so thank you for your attention. I'll turn it back over to Kevin.

HEARING OFFICER HANSTED: Thank you, Perry. At this time, I'll ask staff to read into the record all those documents already appearing in the Table of the Record, and those documents have been identified in the Table of Record for reference purposes. Mr. Lazarus?

MR. STEVEN LAZARUS: Good afternoon. Steven Lazarus. For today's record, I would like to enter into the record Exhibits A through CC.

I would like to note that, in item BB, the presentation being provided today by Eastern Connecticut Health Network is included in those documents.

Also, OHCA intends to add to the record Exhibit DD, which will be the PowerPoint presentation submitted by Prospect Medical Holding.

And, also, a new document that we received today that we're in the process of reviewing, the Quality Assurance Commitment, is being added as Exhibit EE.

HEARING OFFICER HANSTED: Thank you, Mr.

Lazarus. Counsel, are there any objections to any of the exhibits?

MS. REBECCA MATTHEWS: No objection. This is Rebecca Matthews from Wiggin and Dana here on behalf of ECHN. There are no objections to the record. We just had a few clarifications that we wanted to make if that's okay.

HEARING OFFICER HANSTED: Sure. Absolutely.

MS. MATTHEWS: The first is with respect to Exhibit E.

HEARING OFFICER HANSTED: If you just bring it closer to you, it might help.

MS. MATTHEWS: Can you hear me now? Is that better? So the first is with respect to Exhibit E. There's a reference to a two-page request for an extension to file the original application. I think there were two separate letters, both of which were two pages, one from each of the Applicants, co-Applicants, so I'm not sure if this is referring to the letter from PMH or ECHN, but we just wanted to make sure that both letters were included in the record since that was a joint request, if possible.

HEARING OFFICER HANSTED: Thank you. Yes.

MS. MATTHEWS: The second is with respect to Exhibit H. There's a reference to a one-page public comment letter. It doesn't say in the Table of Record who it's from or the date.

I think, from looking at the docket, it is referring to an e-mail from a Mr. Tonerowicz(phonetic) from last October. Again, no objection at all to it being in the record.

We just wanted to make sure or to clarify on the record that there are other letters of support that have been filed. Some of them were filed with our initial application. I think that's DD, was the filing, and then additional letters have been filed with our most recent submission or the submission on Monday, the 28th, so I just wanted to note that for the record.

A very small point on Exhibit K, which it says it's dated November 24th, and I think it's dated the 23rd, and you just may hear us reference that filing. I just want to make sure there's no confusion.

Just a couple more. One is P, where the agencies have taken administrative notice of the Greater Waterbury Health Network application, and, again, no objection at all.

As you mentioned, these applications are

very lengthy. They're thousands of pages, so we don't actually have that application with us today, and we may not know everything in it, and we would just ask, if it's possible, if there's anything specific that might be used from that application in this decision that we might not otherwise know about, if you could, please, if we could respectfully request to have some specific notice and an opportunity to respond, because we do not have it with us today.

And I think that is all. I know you've added the quality commitment letter, which we submitted today. Thank you very much.

HEARING OFFICER HANSTED: Thank you. Okay and, at this point, would all the individuals, who are going to testify, would you please stand, raise your right hand and be sworn in by the court reporter?

(Whereupon, the parties were duly sworn in.)

HEARING OFFICER HANSTED: Thank you, everyone. Just a couple more points. First of all, before each of you speaks today, if you've submitted pre-filed testimony, please adopt that testimony for me on the record today before you speak. Thank you.

And if everyone would like to go down the

line and just introduce yourselves, that would be helpful. Start down here.

MS. MELINDA AGSTEN: I'm Melinda Agsten of Wiggin and Dana, counsel to ECHN.

MS. MATTHEWS: Rebecca Matthews, Wiggin and Dana, counsel to ECHN.

MR. PETER KARL: Peter Karl, CEO of ECHN.

MS. JOY DORIN: Joy Dorin, member of the Board of Trustees.

DR. DENNIS O'NEILL: Dennis O'Neill, Chair of the Board of ECHN.

DR. MITCHELL LEW: Dr. Mitchell Lew, President, Prospect Medical Holdings.

MR. VON CROCKETT: Von Crockett, Senior Vice President of Corporate Development for Prospect Medical.

MR. JONATHAN SPEES: I'm Jonathan Spees. I'm Senior Vice President with Prospect Medical Holdings.

MR. STEVEN ALEMAN: I'm Steve Aleman, Chief Financial Officer, Prospect Medical Holdings.

MR. TOM REARDON: And I'm Tom Reardon, President of Prospect East.

MS. MICHELE VOLPE: And I'm Michele Volpe, Legal Counsel for Prospect Medical Holdings.

HEARING OFFICER HANSTED: Okay. Thank you, all, and welcome. And, at this point, Attorney Matthews, you may proceed with your presentation.

MS. MATTHEWS: Thank you, all, very much for this opportunity. I'd like to introduce first Dr. Dennis O'Neill, who is going to speak on behalf of ECHN.

DR. O'NEILL: Good afternoon.

HEARING OFFICER HANSTED: Good afternoon.

DR. O'NEILL: Mr. Hansted, Mr. Zinn Rowthorn, members of the office of the Attorney General, and members of the office of Health Care Access, my name is Dennis G. O'Neill. I'm the Chair of the Board of Trustees of Eastern Connecticut Health Network.

I'm also a physician in private practice working in the Manchester and Vernon communities for the past 33 years.

Thank you for providing us with the opportunity to submit testimony in support of ECHN's proposal to transfer its assets to Prospect Medical Holdings.

First, I would like to adopt my pre-filed testimony, then I'd like to explain that, after my introductory comments, Peter J. Karl, ECHN's President and CEO sitting to my left, is going to make a brief

presentation on our financial situation.

Joy Dorin to my immediate left, one of our Trustees and Chair of the Board's Transaction Committee, will then present information on the transaction, itself, and ECHN's quality program, after which representatives of Prospect Medical Holdings will offer information on their organization.

Manchester Memorial Hospital and Rockville General Hospital, the flagship hospitals of ECHN, were built about 95 years ago by members of their respective communities in response to the influenza pandemic of 1918 and, also, as memorials to those community members, who died in World War I.

For many decades, these two hospitals functioned as separate community hospitals, and then, about 20 years ago, they joined together to form ECHN.

They were both in good financial shape at the time, but pursued a merger, in order to provide more efficient and better integrated hospital care for their citizens.

Over the last two decades, ECHN has grown beyond the two hospitals into a health care network with 13 wholly-owned subsidiaries, 12 joint venture companies, and dozens of facilities serving the needs of our

communities.

ECHN now employs 3,000 people in eastern Connecticut, and the hospitals in Manchester and Vernon are the largest employers in their communities.

In just this last year, 2015, approximately 115,000 people were treated in our hospitals, 61,000 folks were examined in our emergency departments, 5,000 patients were cared for by our visiting nurses, and we delivered about 1,400 babies.

Needless to say, the citizens of eastern Connecticut need and use our facilities, but the American people, in general, and the members of our communities, more specifically, have told us that they want and need care that is even more integrated than the care they receive today, care that is higher in quality and lower in cost.

In an attempt to respond to these needs and in anticipation of worsening financial conditions, the trustees of ECHN about four and a half years ago formed a work group to evaluate whether or not ECHN should pursue a partnership with another organization.

At that time, we thought we had about five years before our circumstances became dire, due to changes in the health care landscape that we thought were

going to have a negative effect on our organization.

The first year was spent deciding that we should partner, as opposed to going it alone. In the second year, we selected as our best option an asset purchase agreement offered by Vanguard Health System and New Haven Health System.

In the middle of the second year, Vanguard was acquired by Tenet, and we spent the remainder of that year getting to know them.

During year number three, we negotiated a deal with Tenet that would have preserved our hospitals, the jobs of our employees, and the pensions of our retirees, and provided capital for future growth, but, at the end of 2014, Tenet abruptly left the state, citing what it perceived as overly restrictive conditions placed on its acquisitions by state regulatory agencies.

That was a great disappointment to us, because it essentially scuttled three years of work, but, more importantly, we were three years closer to 2016 with still no deal in hand.

But then, in 2015, our fourth year, we were fortunate enough to find Prospect Medical Holdings and spent most of that year negotiating a deal with them and resubmitting our application for regulatory review.

Prospect is a health care company based in California that, through the business acumen of its founders, the perspicacity of its senior management team, and the perseverance of its staff, has in the last two decades become an industry leader in what is referred to as population health.

That is managing all aspects of a health system, inpatient care, outpatient care, physician office care, home health care for a large group of people, in this case the people of eastern Connecticut, with higher quality and lower cost.

Like all health care companies, though, Prospect is not a perfect hospital company. Last year, during inspections at two of its California hospitals, the Centers for Medicare and Medicaid Services, CMS, made determinations that required correction.

You'll hear more about this in a couple of minutes from Joy Dorin, one of our Trustees, and the folks from Prospect.

But it's important to note at this point that our Trustees and Corporators chose overwhelmingly, the Trustees voted unanimously and the Corporators voted with 98 percent approval rate, to transfer our assets to Prospect for at least three important reasons.

First, Prospect is not Tenet. They're smaller in size, they're less threatening as a newcomer within the state of Connecticut, and because they're not affiliated with Yale or Hartford HealthCare, they would actually increase, rather than reduce, competition within our state.

Secondly, the deal we negotiated with Prospect is essentially the same deal we had negotiated with Tenet, with preservation of our hospitals, our employees, our retirees and capital for our future.

And, thirdly, Prospect is a recognized expert in what they refer to as coordinated regional care, taking to a new level what began with the creation of our two hospitals many years ago and continued with the formation of ECHN.

Now, for more detailed information on ECHN's financial condition, I'd like to pass the microphone to Peter J. Karl, ECHN's President and CEO.

MR. KARL: Thank you, Dr. O'Neill. My name is Peter Karl. I'm the CEO of ECHN, and I adopt my pre-filed testimony.

My mandate today is to try to explain how and why we came here today. It really all started back in 2010, as we reflect back and think about the

Affordable Care Act, the thought of decreasing governmental payments, focusing on value, lower cost, but high-quality care.

I'd like to walk you through the story of how we got here. What I would ask is that you take slides seven, eight and nine and put them side-by-side in front of you. That may make it easier for me to explain to all of you. Thank you.

So I started as CEO in December of 2004 and began the leadership of ECHN then. Back in the earlier days, about 11 years ago, you can see how the organization was performing.

It began to find its way in the 2008/2009 time frame. At that same time, if you remember, there was a significant issue with pensions, as it relates to WorldCom and Enron, and organizations not being able to fund their pensions, therefore, the PBGC had to pick up their pensions.

What happened then was the Pension Protection Act went into play, and that Pension Protection Act took the actuarial projections from a 21-year look forward down to a seven-year look forward.

Because of that, the pension liabilities for all organizations grew significantly. To make

matters worse, the market crashed. We all remember 2008 and 2009.

Even though ECHN froze their pension, we now had a pension liability, a pension payment annually that went from zero dollars, because the pension used to fund itself through the market performance, to a total of $12 million per year we had to pay into our pension.

Our pension, because of the market crash, grew significantly. If you follow our debt throughout the years, you can see that we controlled our debt. There was no way for us to take on much more debt, except back in 2009, where we had to invest about $9 million into a new critical care unit at Manchester Memorial Hospital, because of the need of our patients.

On top of all of that, as we're going through this difficulty right now, about $12 million went to the pension, about $12 million went to our debt, so the first $24 million went out the door to pay liabilities. What that left was very little to invest back into the organization.

If you look at the next page, on page eight, you'll see that, at the exact same time, later on in the years, in '14, '15 and '16, the federal government and the state government began imposing certain

reductions in reimbursement and imposing a hospital tax.

The hospital tax began earlier, but, in 2014, it was about $4 million, and, if you all remember, the federal government could not agree on a budget, so there was a two percent cut across the board, called sequestration. That affected us to the tune of $2.2 million per year.

In fiscal year ’16, this year, the Connecticut hospital tax imposed on our organization is nearly $10 million.

Most recently, and you may want to add this to the 9.942, the additional $4.6 million that was promised to our organization by the state government was held back, due to the state’s budget woes, so that $9.9 million jumped an additional $4.6 million.

I would ask you now to reflect back to page seven, please. You look at page seven, you can see that the organization can no longer perform at a positive cash flow or at a profit.

It has to take all of these reductions. You add up about $25.1 million in reductions in reimbursement or tax, and you add that to the current organization, so then you must wonder why how did you get at least the $2.2 million or a loss of only $.3 million?

Well there are only two ways to get to that. One way is to reduce labor. Labor is 60 percent of our operating costs. We reduced approximately 200 FTEs over the past two years, because of these reductions.

And if you go to page nine, there's the other side of the ledger. You look at the organization, and how do you reinvest in the organization if you don't have any money? Well you don't. You can't fund your depreciation, so what happens then?

The age of your plan continues to age. Facilities begin to breakdown, equipment begins to breakdown, and, as Dr. O'Neill mentioned, we're talking about 100-year-old buildings.

Our average age of our plant, as it's measured nationally, is 21 years old. The national average for the age of a plant is 10 years old. We are twice that age.

If you flip to the next page, please, and I'll wrap this up, we are looking at not only these forces, but the continued negative forces into the future; continued erosion from the federal government, declining levels in payment from the state government, payment reforms that include financial risk, these

continued pension obligations that just won't go away, the state of Connecticut is struggling with that right now themselves, all of you, and the continued rising costs. We have to pay our employees. We have to pay for supplies and increases. Cost of living continues to go up.

I can't express enough the dire situation we are in at this point in time. Next page, please.

Let me briefly explain the proposed transaction. What this transaction will do for us it will satisfy our debt and our pension liabilities.

ECHN will have a fresh start. There will be no debt. The pension liabilities will be satisfied by Prospect Medical. Not only that, $75 million in capital will be reinvested in the health network, and what I mean by the health network is what Dr. O'Neill mentioned.

Not only the two hospitals, or long-term care facility, or VNHSC, but into the communities, whether it's additional services, additional physicians, specialists that we currently don't have.

We will continue to have the ECH brand and mission. There will be an Advisory Board, and we will employ all physicians, all employment, all employees. Excuse me.

And my last slide. One of the reasons why we chose Prospect, and as Dr. O'Neill mentioned, is because they know how to survive and thrive in risk-based markets. They've done it in California. You're going to hear a lot more about that as we go forward, but another reason why we wanted to step into the for-profit arena is this.

For-profits can go to the equity markets to raise capital. Not-for-profits can't. Many of the not-for-profits in Connecticut that are interested or were interested in us are cash poor. They cannot come forward. Adding our woes onto their woes is just a recipe in failure.

Thank you. I'll now pass this over to Joy Dorin, Vice Chair of the Board of Trustees.

MS. DORIN: Can you hear me? Okay. Louder? Can you hear me now?

MR. ZINN ROWTHORN: In the back, can you hear the speakers? Thank you.

MS. DORIN: Great. Thank you and good afternoon. My name is Joy Dorin, and I adopt my pre-filed testimony.

I've been a member of the ECHN Board of Trustees since 2004 and currently serve as the Vice Chair

and Chair of the Transaction Committee.

In my professional life, I've held positions in health care organizations, including Cigna Health Plan, Athena Health Care and Qualidigm, the state's quality improvement organization that works with the Centers for Medicare and Medicaid.

Throughout my career, I've been involved in and responsible for quality, patient satisfaction and compliance matters across the health care continuum.

In addition to my professional background, I'm a longtime resident of Manchester, nearly 40 years. While I was born and raised in New Jersey, I consider Manchester my home.

This is where my friends live, my son and his young family live, and my husband owns a small business on Main Street.

I mentioned my Manchester roots, because insuring ECHN's future is important to me, and it's important to every other individual and family, who lives east of the river.

In evaluating our options, we established four goals, that high-quality health care services are accessible, affordable and delivered safely to the people in this part of Connecticut, that clinical services are

expanded, that employees continue to have jobs, and facilities and technology are upgraded.

Dr. O'Neill talked about the importance of preserving ECHN to serve the public need, and Mr. Karl covered the financial challenges and how the Prospect transaction will allow ECHN to meet these challenges.

I'd like to spend the next few minutes focusing on the importance of quality and safety. We are proud of the efforts our staff and physicians have taken.

Of note, ECHN was one of the first networks in Connecticut to become a high-reliability organization.

This decision and journey has changed our culture to the benefit of our patients. It has resulted in process improvements and a reduction in serious safety events.

Our focus on quality has resulted in the Joint Commission recognizing our two hospitals as top performers.

At Manchester Memorial Hospital, we were recognized for heart failure, pneumonia, surgical care, immunization and perinatal care, and, at Rockville Hospital, for pneumonia, surgical care and immunization.

Because of these accomplishments, it was

important that our potential acquirer share our commitment to quality and safety.

As part of our initial due diligence, ECHN requested quality information from all potential acquirers and did a side-by-side comparison of the CMS quality indicators.

We also visited hospitals owned by the potential acquirers and met with staff members involved in quality and performance improvement.

More specifically, visits were made to Prospect hospitals in California and in Rhode Island to obtain additional firsthand information.

When ECHN learned of the immediate jeopardy determinations identified at the Los Angeles Community Hospital and the Southern California hospitals, the Board determined that it needed more information and appointed a quality evaluation team to research and report back to the Transaction Committee and the full Board.

I was appointed to this team, along with Dr. Michelle Conlin, the Chair of the Performance Assessment and Improvement Committee and a practicing physician, and three members of ECHN’s Quality Department, the Vice President of Quality and Safety and

two Quality Improvement Managers.

The team was charged with determining whether Prospect's experiences in California could threaten or diminish ECHN's current quality and safety standards and its ongoing performance improvement initiatives.

To complete our charge, the team first focused on the immediate jeopardy issues and deficiencies and Prospect's plans for correction.

The team found the remediation plans to be comprehensive and appropriate, and, in several minutes, a representative from Prospect will provide more information, the root causes and the corrective action plans.

The evaluation team, however, didn't stop here. We decided to go broader and deeper, and, over the last four and a half weeks, requested, received and reviewed extensive amounts of information from Prospect about its hospitals in California, Texas and Rhode Island.

This information included past regulatory surveys, remediation plans and year-over-year quality metrics. The quality reviewers focused, in particular, on the most recent surveys, as they would be most likely

to reveal any issues or patterns of concern with how Prospect currently conducts its hospital business.

The team also looked retrospectively at quality assessment and performance improvement indicators and prospectively at the 2016 Quality Assessment and Performance Improvement Plans.

Additionally, we reviewed employee turnover statistics and, in a parallel activity, collected and discussed updated financial information.

Given that regulatory standards are applied differently among regions, the evaluation team paid special attention to Prospect’s CharterCARE hospitals in Rhode Island.

The evaluation team sent its Quality Department team members to those hospitals for a day-long visit to observe and evaluate all aspects of the quality and safety programs in person.

The ECHN reviewers found not only that the programs were of high quality, but they had been enhanced, rather than scaled back, after Prospect’s acquisition.

Throughout this review, Prospect made its information and personnel fully available to assist us. As we discussed their plans and approach to quality,

Prospect was asked specifically whether or not they expected to receive any additional survey deficiencies.

Prospect responded that, while immediate jeopardy findings were not expected, because of the new quality controls, structure and processes it had implemented, it was likely that additional deficiencies would be noted in resurveys. This, in fact, did happen.

In the March 23rd CMS response to the Los Angeles Community Hospital resurvey, the hospital was cited for deficiencies in infection control and nursing services.

Prospect communicated this to us on the same day they were notified, and we have since had several follow-up communications with them about these results.

Quality improvement, by definition, is a continuous process. We all know hospitals are complex regulated organizations with many moving parts, and sometimes, despite the best intentions and focus on care, issues do arise.

After the review just outlined, the evaluation team concluded the immediate jeopardy issues were isolated, that Prospect took the California survey results seriously and responded swiftly with corrective

action plans.

The team also collaborated with the Transaction Committee and ECHN Council to evaluate Prospect's continued appropriateness as a transaction partner. The Transaction Committee recommended that ECHN seek a quality commitment letter to ensure ECHN's patient quality, patient experience and safety programs retain their forward momentum for a period of time post-closing.

Prospect has agreed to execute such a letter, which also contains a provision for ECHN to benefit from the quality improvement programs observed at the CharterCARE hospitals.

Based on the findings presented by the evaluation team and the protections gained under the quality commitment letter, the Transaction Committee recommended and the Board confirmed ECHN's commitment to proceed with the transaction.

Prospect's business model depends on significant local oversight for operations, including quality and safety. This means the current ECHN quality team will continue its good work in eastern Connecticut.

In summary, in addition, it is anticipated that Prospect's eastern region, which includes Prospect's hospitals in Connecticut and Rhode Island, will

collaborate on quality and safety measures that are expected to be implemented in Prospect's hospitals across the country.

ECHN looks forward to this collaboration. Thank you very much.

DR. O'NEILL: Thank you, Joy. That concludes ECHN's comments. Next, I'd like to pass the microphone to Mitchell Lew, who is the President and Chief Executive Officer of Prospect Medical Holdings.

MS. MATTHEWS: Before Mitchell talks, if we can just make one clarification point? I know Joy mentioned that the quality commitment letter PMH had agreed to sign it. That is the letter that we have. It has now been executed and signed, and it's been submitted.

MR. ZINN ROWTHORN: Can I ask by way of one clarification? That letter, does it have a duration? Do the commitments in that letter have a duration?

MS. DORIN: Two years.

HEARING OFFICER HANSTED: Can you just speak into the microphone? Thank you.

MS. DORIN: Two years.

MR. ZINN ROWTHORN: I don't want to get ahead of anybody's presentation, and feel free to tell me

that I'm about to hear the answer to this in one of the presentations we're going to hear, but, from a structural perspective, to the extent there were personnel, who were identifiable for quality control in Prospect in those California hospitals that had the immediate jeopardies, what role will those individuals have with respect to quality control in the ECHN system going forward?

MR. CROCKETT: This is Von Crockett. Actually, none of those individuals will have a role, and, during my testimony, I'll go through the structure that we will have for the eastern region new individuals.

MR. ZINN ROWTHORN: Okay. We'll look forward to hearing that. Thank you.

DR. LEW: Good afternoon. My name is Dr. Mitchell Lew. I'm President of Prospect Medical Holdings, PMH. I adopt my pre-filed testimony.

I appreciate the opportunity to speak today in support of the conversion application regarding the proposed acquisition of assets of Eastern Connecticut Health Network, including Manchester Memorial Hospital and Rockville General Hospital by PMH.

I'd like to begin by reintroducing the PMH representatives here with me, so that they can adopt their pre-filed testimony.

First is John Spees. John is Vice President of Mergers and Acquisitions at PMH. John will discuss the transaction, as well as certain aspects of PMH's operations. John?

MR. SPEES: I'm Jonathan Spees, and I adopt my pre-filed testimony.

DR. LEW: Next, I would like to introduce Steve Aleman, who is the Chief Financial Officer of PMH. Steve will be available to answer any questions related to the financial operations of PMH.

MR. ALEMAN: I'm Steve Aleman, and I adopt my pre-filed testimony. Thank you.

DR. LEW: Von Crockett, Von is the Senior Vice President of Corporate Development at PMH. Von will discuss the health care quality matters at the various PMH hospitals and be available to answer questions related to our quality programs. Von?

MR. CROCKETT: Von Crockett, and I adopt my pre-filed testimony.

DR. LEW: In addition, we have Tom Reardon. Tom is President of Prospect East and has been working closely with ECHN from the start of the process, and Tom will speak later in our presentation.

So let's go to the first slide. ECHN and

Prospect, committed to this community. Who is Prospect? We are a health care services company, and we operate local community hospitals, local governance, local physician leadership.

We invest in our hospitals and in our communities. For example, in Rhode Island, we're just finishing up a beautification project, rebuilding the entrance of the hospital. We've enhanced the GI lab, and we're looking to hopefully build a heart lab, also.

We've opened two hospitals in California recently in areas that needed them, specifically, in Bellflower, a psychiatric hospital, and in Orange County a new medical surgical hospital.

And, so, the stability that we do bring to communities are continued employment and creation of new jobs. We also believe in expansion of programs and services to improve access and quality.

For example, in Texas, we built a brand new emergency room at the Nix Health System. We've opened several urgent cares in Rhode Island and the surrounding communities, and, in California, we've opened a lot of urgent cares and, also, wellness clinics, again, to promote access and for convenience for the population.

A little bit about our hospitals. We have

14 community hospitals. Seven are in California, four in Texas, which we've owned for about four years, and two in Rhode Island, which we've owned for roughly two years, and then recently opened or acquired a hospital in New Jersey.

We serve many different communities. In fact, many of the hospitals that we operate are in underserved communities, and we take all types of health insurance. To us, a patient is a patient.

We provide medical, surgical, in some cases tertiary, psychiatric and long-term care services. We have a lot of experience in proving multiple services across our hospitals.

We have over 40 outpatient clinics and centers in our model. Not all of the care is delivered in the hospital. A lot of the care is delivered on an outpatient setting, because we want to be very cost effective.

We don't just own and operate hospitals. We also have a lot of experience at operating and managing medical groups. We've been doing this for many years, and you can think of our model as a multi-specialty health care provider without walls.

They are structured in what we call

Independent Practice Associations, called IPAs, where these are networks of doctors that are working to coordinate care together.

And the beauty of this model is that physicians can remain independent, if that's what their wishes are, or they can be employed. Our IPA model can utilize both, depending on what the doctor wants.

We've been doing this in Southern California for over 20 years. We have quite a presence in Southern California. We've also been growing our physician networks in Texas.

We have over 500 doctors in our network. In Providence, Rhode Island, we have over 350 physicians, and, in New Jersey already, we have 125 physicians.

As I stated earlier, we contract with all major health plans. We have nearly 9,000 physicians in all of our networks taking care of nearly 300,000 patients, and we provide coordination of care across the entire continuum.

And, so, what that means is whether a patient is at home, in a hospital, a skilled nursing facility, clinic, or physician office, we follow their care throughout.

Our goal is to have better outcomes and

high patient satisfaction, so that patients can tell their family and friends come get your care here at ECHN.

As a result of our company's experience of owning and operating hospitals and managing physician groups, we have developed what we think is a very unique model of care, a very unique delivery model, which we call Coordinated Regional Care, or CRC.

Coordinated Regional Care is where we integrate hospitals and physicians and other providers in the community. For example, the local home health company, the local palliative company, the local DME, Durable Medical Equipment company, and they work very closely, we work very closely with the health plans, the payers and the government, because we want to achieve improved patient care and high patient satisfaction.

And this model we've implemented already successfully in seven regions in California, Texas and Rhode Island and currently in development in New Jersey, already here in Connecticut, and soon to be in Pennsylvania.

So you've heard this buzz word, population health management. Let me just put this in simple terms for those, who are not in health care.

We care about the health of everybody in

the community. That matters to us, and we have the experience to ensure that everybody will get good health care.

We have a unique model, which provides higher value, and, so, you can achieve better care, and it doesn't have to necessarily cost more.

So how do we do this? What is our secret to improving care and outcomes? Well it really revolves around patient-centered, yet physician-led approach.

We have multi-disciplinary care teams that take care of our sickest patients, they're available 24/7, teams of providers, such as nurse practitioners, pharmacists, social workers, that are available to be called by these sickest patients that we use data to stratify, to identify who those patients are, and we engage the family, we engage the patient.

We have a homebound program, so we will go to the patient's home if we need to. We have disease-specific care plans to take care of conditions, such as diabetes or heart disease, and we also integrate behavioral health, because behavioral health exists in all populations, and some patients have what we call comorbidities.

They have medical problems, they have

behavioral health problems, and if you can take good care of and address the behavioral health needs, that sometimes is the key to taking care of the medical needs, and that is something that we're working to perfect, is to integrate the two.

We utilize quality care coordinators, which call patients to remind them to go see their doctor, to remind them to get their blood test or have their screening tools.

And, again, we follow patients, hospital, skilled nursing, long-term care, again, across the continuum, and it's a physician-led network.

And, so, we absolutely have a commitment to quality, and, certainly, in our medical groups, quality is not just a word that we throw around. We've actually achieved the highest level of quality.

A very respected trade association, called the California Association of Physician Groups, the largest in the country, has recognized us at the highest level, achieving elite status four years in a row.

Another respected association, IHA, has recognized us for our clinical quality. We've received awards from the Department of Managed Health Care in California, specifically, cardiovascular disease,

cholesterol control and diabetes, and these are some of the disease-specific care plans that I spoke to on the prior slide.

We've achieved four to five STAR out of a possible five star on our Medicare Health Plan Quality and Performance Ratings.

I'm going to turn it over to Von.

MR. CROCKETT: While we're very proud of some of the quality achievements that we've done, I think it's also important for us to pause for just a moment to talk about some of the mistakes we've made, and, specifically, what were the causes of those mistakes? What corrective actions have we taken, and what have we learned, in terms of how to make us a better organization going forward?

Specifically, as you're aware, quality is something that's being assessed on a daily basis, and it is through one of those assessments by our regulatory agencies in California that it was identified that within two of our 13 hospitals in California that two of the facilities had a deficiency, specifically as it related to what's called the CMS Medicare Conditions of Participation.

Specifically with that, there were

violations with what's called immediate jeopardy. Specifically, those immediate jeopardy violations were in one facility. We had an allegation of physician misconduct and then the organization's response associated with that, and then, in another facility, we had immediate jeopardy associated with temperature and humidity, specifically in the OR suites, and then, third, the washing of sterilization of surgical instruments.

I wanted to spend just a second to talk about the root cause associated, and in any event, where there's a breakdown in process or failure, it's not usually just one event.

Specifically, as it's been discussed beforehand, we take great pride in making sure that each of our hospitals have strong local leadership, and, with that, we have delegated the quality programs at an individual level down at the hospital level, and it was being managed and run at the hospital level.

Within both of these facilities, part of the issue that we had was that we had turnover at the executive ranks, as well as within some of the department managers.

When there was a patient complaint made and CMS came in to do the survey, not only did they find

that in some instances were that the care that was being provided was not consistent with the policies that we had in place, care was somewhat inconsistent.

Additionally, when they reviewed the quality program, what they found was a rigid program, where the organization had adopted previously and modified to the issues that were at hand.

At the one facility that had the issues with the temperature and humidity and the washing of sterilization, previously in the year there had been, as we were doing construction within the building, there had been an event, where there had been a small localized fire from a contractor up on the roof, which caused substantial issues with our HVAC system.

That, in itself, is not the issue. The issue was was that our response associated with that was not sufficient to address the needs in resolving the issue.

And when CMS came in, they found that the response should have been a stronger response in making sure that the issues are addressed.

When we look back at the root cause associated with it, there are several issues with that. The first of them is is that, as we had delegated the

role of quality and the responses to the local leadership, there could have been a stronger response from Prospect Medical in making sure that as organization -- that these two organizations had when they had the turnover that they had, that the appropriate resources were provided to them at an executive level, as well as, also, at the director level in resolving these very specific -- in these very specific complaints.

Once the deficiencies were identified by CMS, and I wanted to point out one point, which is that, on the immediate jeopardies that we got for all three, it wasn't -- there was no patient harm that was actually dealt with, but it was more of an issue that the care that was being provided did not meet the conditions of participation, and it wasn't also consistent with our policies of what we had in place.

As soon as we had been notified by CMS, we took immediate action to making sure that the issues were resolved there, as well as developing a corrective plan for any of the other issues that they identified, in addition to the immediate jeopardy.

We have previously disclosed these deficiencies in detail to ECHN, as well as the Attorney General's Office and OHCA, previously to today's

testimony.

As part of that, we have discussed extensively with ECHN and our quality counterparts to review our corrective action plans to making sure that they were appropriate and detailed.

At a more detailed level, when we talk about the corrective actions, the first thing that we did was we engaged a nationally-recognized consulting firm, and the purpose of them was to do two things.

One of them is to come and look at the quality plans that were in place at both of these organizations and making them to be an organic and a responsive quality plan to not only address the issues at hand, but to make sure that the quality plan would be responsive for any future issues that would arise within the organization.

Secondly, we have provided additional resources at the local level of the hospitals by adding strong and experienced leaders, as well as additional capital resources at the facility to making sure that the issues are addressed.

At a corporate level, we have modified our quality program by having additional oversight, not just for these two facilities, but it will be for all

facilities within Prospect.

The new oversight is going to consist of we've got four individuals that are already in place. One of them is a Chief Quality Officer, a Chief Clinical Officer, a Corporate Chief Nursing Officer, and an Associate Vice President of Regulatory and Patient Safety.

The roles of these four individuals is, first of all, is to monitor the quality programs at all hospitals, and the point being there is making sure that, A, that they're on track and that they're responsive to the issues that are being addressed in the organization and that they're timely.

Secondarily is to provide additional resources, if needed, to implement the program, so in the event that a hospital is lacking the resources, they can provide resources or identify what resources need to be provided.

The third is making sure that, when the quality goals are not being achieved within the organization, is to help the organization to take corrective actions in a timely fashion.

Going forward, one of the big things that we anticipate happening is, instead of being reactive, we

want to be proactive, and, to do that, we're going to be looking to have the facilities be survey ready for both the accrediting agencies, as well as the Department of Health.

And then, lastly, the corporate oversight will assist in sharing the best practices among the various hospitals, and what we found is that, as we've got multiple hospitals that have done very well in multiple areas, is to bring those strengths and weaknesses across the entire organization, so that we have an organization that's stronger within the whole.

Lastly, our Quality Assurance and Performance Improvement Plan is being revamped by a national consulting firm, and, with that, we believe it is going to be a much stronger program for all.

One of the things that was important when we looked at the transaction, specifically for ECHN, was that they had a very strong quality program to begin with, and they have achieved some great results, and it was important for us, as well as for them, that they know that we are going to continue on with their quality program, and our role in the oversight of it is to provide additional resources, if needed, the sharing of best practices among the various hospitals, and to

provide them resources that they may be lacking in any of the specific areas.

With that, ECHN is already -- is well on the way for the high reliability organization, and that's something that not only do we support, but we've started the process in Rhode Island, and we look to roll that out actually in our California hospitals, as well, going forward.

We continue to work on the issues that were raised by CMS, and we are confident that the corrections that we have put into place not only will be satisfactory, but that will be shortly corrected.

And with these changes, the organization is going to be a much stronger organization as a result of that, not only for Prospect, but, also, in combination with ECHN.

Switching gears now for just a second, I want to spend just a few moments on slide 10, and when you look at what we hope to achieve in ECHN, it's important to take a look at what has been achieved in the past year in Rhode Island, and what exactly has Prospect brought to the organization?

First of all, probably the most substantial is that, as we've looked at the organization

and the affiliation of the physicians, is that we have formed a multi-specialty IPA that's now over 100-plus primary care physicians.

Part of that was through the employment of physicians, and part of that was through bringing additional independent physicians into the organization.

We've expanded outpatient services within the area, which includes an investment in an outpatient oncology center, and this was all done as a result of providing additional significant capital to them.

The capital is partly being spent on infrastructure needs and deferred maintenance, and the other part of it is being through the development of our relationship with the physicians.

All this is leading up to one of the issues that's facing Rhode Island most substantially, is they're a Medicaid expansion state, like Connecticut, and, as such, their state budget is under substantial pressure in adding on the fee for service Medicaid population with that, as we've worked with the legislation and we're implementing a Medicaid value-based pilot program, in terms of the managing of the Medicaid lives that will hopefully be a solution for the state of Rhode Island.

When we looked at expansion to the east, we looked at several factors that we felt would be important of making sure that our model is going to be one that could be easily adopted and appropriate, and, with that, we looked at Connecticut, specifically, and there are specific things that are attractive for what we believe our model in Connecticut.

With that is a state that, first of all, is a Medicaid expansion state, and, with that, we believe that there’s going to be a need for organizations to have relationships with both the health plan and the physicians that are non-adversarial and, instead, are working for the better of the patient in providing care and the outcomes associated with that.

And, lastly, a state that is able to deal with the changing landscape from both a regulatory perspective, as well as a leadership perspective, as we go through those changes.

What will this lead to? It will lead to an organization, where, instead of having adversarial relationships that normally have existed traditionally in health care, pitting players against players, health plans and hospital and physicians, all working together, in terms of providing better care to the patient.

With that, we believe the patient will have higher satisfaction. We believe that this is going to allow, then, for greater access for capital for ECHN, and, lastly, a sustainable model for health care that will allow for these two community-based hospitals to continue on.

MR. ZINN ROWTHORN: Before we switch gears, thank you, Mr. Crockett, for that, it would be helpful, I know you have submitted some information relating to the immediate jeopardy findings, it would be helpful at some point to have a summary of the status of those matters, whether additional findings have been made, the time frame for resolution, where you are in that process.

For my sake, at least, and perhaps for others, it would be helpful to have a sense of perspective about what those kinds of findings and that process mean to a hospital, whether this is a unique experience for the Prospect medical system.

I'm interested, also, to hear from ECHN about its views about helping us put that process into context, so we'll take that now or whenever, but, while we're here today, it would be helpful to hear about that.

MR. CROCKETT: Let me start off with the

status and the timing. There's two, the two facilities have got the two different immediate jeopardies, and, so, it needs to be separated, because they're on a separate track from a timing and a resolution.

The first hospital is LA Community Hospital, and it had to originally start off with the allegation of physician misconduct.

There was a -- we had put together our plan of correction, and that plan of correction had been submitted back in late January, and, with that, we were resurveyed by the Department of Health, CMS, in the middle of February.

When they came out to do the resurvey, there were, I believe, approximately five or six deficiencies that were in the original report, including the immediate jeopardy, and the issues that were identified in the original report were mostly found to be in compliance, with the exception of two, and those two were nursing care and infection control.

Specifically, on the infection control, there was an issue, as related to the location of how the instruments were being -- where they were being sterilized, and there was a recommendation by one of the surveyors to move the location of the sterilization of

the instruments, as well as what's called our utility rooms, clean and dirty rooms.

As it relates to the issues of patient care, there were several findings associated with it, and, once again, it was an issue of being inconsistent with our policies that had been put into place.

Specifically, there's what's called a plan of care, and it's kind of like the roadmap nursing has for when a patient comes in, in terms of what they hope to achieve with the patient and what the goals of them are, and what they found was is that the plan of cares were inconsistent on a documentation basis associated with that.

The plan of correction from the resurvey is due on April the 7th. We believe we'll either -- we'll have it in by then or before then. Once the plan of correction is ready to be submitted back to CMS, we will be providing that additional response to the regulatory agencies, as well as ECHN, and, so, I anticipate that will be later next week that we'll have that.

With that, we anticipate CMS to be out shortly after that, and, currently, we've been extended, in terms of from a timeline, and it's now the first part

of June, in terms of from the track that we're on with CMS.

MR. ZINN ROWTHORN: Okay, so, by way of clarification, so participation in the program will be terminated by the first part of June, unless there is a resolution before then to CMS's satisfaction?

MR. CROCKETT: Correct.

MR. ZINN ROWTHORN: Okay.

MR. CROCKETT: Originally, it was April 13th, and they have now extended it to the first part of June.

For the Southern California Hospital, we have, from the report that was previously given that was the immediate -- well, there's two immediate jeopardies. One had to do with the temperature and the humidity, specifically in the surgical suite, as well as in the cath lab, and the second one had to do with the washing of sterilization of surgical instruments.

From when CMS is out there, when they give out an immediate jeopardy, they actually don't leave the facility until it's abated during the survey process, and what they look for when you put together your plan of correction is making sure that not only was it abated, but there's a process to continually monitor it, and that

it doesn't reoccur and go forward, and, so, as part of our plan of correction, it was making sure that whatever policies and processes were put into place is to make sure that they weren't to reoccur.

That plan of correction was submitted, and it was submitted last week, and we have actually provided a copy of that submission to the regulatory agencies, as well as to ECHN, and each of you should have that.

It's detailed and very thorough and was put together in conjunction and help with our national -- with our consulting firm to making sure that the response was appropriate and met Medicare's expectations with that.

We expect for them to be on site. Currently, the track that that is on, as it relates to meeting the Medicare conditions of participation, I believe it's May 23rd, and, with that, we anticipate, now that we have submitted the plan of correction, that they will be on site shortly to look at our plan and making sure that the corrections that have been put into place were appropriate.

MR. KARL: Mr. Zinn Rowthorn, there's two points that I'd like to make. One is the seriousness of these events were put in a timeline document from the day

we found out through the day that we felt as though all the answers were brought to us satisfactorily, and we'd probably like to add that as Late File No. 1, so you can see the intensity of this.

Number two, I would like to bring forward Linda Quirici, who is the Vice President of Quality Care for ECHN, just to give an update on what we've done and what we've found.

MR. ZINN ROWTHORN: We'll be happy to take that late file, and I'll request that other documents submitted to CMS or received from CMS while our review is pending we'd appreciate a copy of those being submitted.

I'm happy, also, to hear from Ms. Quirici. She should be sworn, I think, if she hasn't already.

MS. LINDA QUIRICI: Good afternoon. My name is Linda Quirici. I am the Vice President of Quality and Safety for Eastern Connecticut Health Network.

HEARING OFFICER HANSTED: Could you just speak into the microphone?

MS. QUIRICI: Sure.

HEARING OFFICER HANSTED: Thank you.

MS. QUIRICI: Okay, is that better?

HEARING OFFICER HANSTED: That's better.

MS. QUIRICI: Okay, so, the Quality Department was brought in on February 24th, told that they meted jeopardies and of the need to review to give our opinion on the quality process in the California hospitals and the Rhode Island hospitals, so we were very involved in reviewing all of the records.

So, initially, they were the immediate jeopardies that Von talked about, and the initial one was the physician misconduct, and that was already a plan of action was in place, that was already taken care of, and that plan of action was put in place, and the response to that we just got, and he spoke about that, so we reviewed that in detail, as a matter of fact, this weekend.

We looked at all of the elements of that again. He mentioned several things that were still involved in the conditions of participation.

When I reviewed that, really most of the areas were deficiencies that might be seen in any hospital, truthfully, and they are developing now their plan of correction for those deficiencies.

The other immediate jeopardies that Von talked about were in the Southern California hospitals. We reviewed those in detail, as well, and we reviewed their other areas that needed to have review.

We also just got their plan of correction, which we reviewed in detail. It is very comprehensive, as they stated. They had a consulting company that came in, as well as legal assistance, to make sure that their plan was comprehensive and thorough, and it was, and I believe they have submitted that, so we reviewed that in detail, as well.

So that was submitted, and, when that comes back, the findings, we will also review that to make sure that things are comprehensive and that there is nothing still outstanding, so that was reviewed by myself and two quality experts that are experts in the areas of the immediate jeopardy, which were the physician, which were infection control and environment of care safety, so we made sure that we brought in our experts to review all of that thoroughly.

MR. ZINN ROWTHORN: Thank you. And has either ECHN hospital ever received an immediate jeopardy notice?

MS. QUIRICI: Not in my tenure. And something important to notice is that 25 percent of hospitals in California receive immediate jeopardy findings, but, in Connecticut, immediate jeopardies are very rare.

So the hospital practices -- you know, hospitals differ a little bit from one coast to the other. Again, we went to Rhode Island to see something that's analogous, and our practices are analogous, and, in California hospitals, you know, function a little bit differently, as well as their regulatory agencies function a little bit differently.

As a matter of fact, you know, quite differently, to be honest with you, so the differences, as far as having an immediate jeopardy, is much more likely if you're in California than if you were in our areas.

MR. ZINN ROWTHORN: Were these the first immediate jeopardies received by any Prospect hospitals?

MR. CROCKETT: No. There was an immediate jeopardy in 2013, if I'm not mistaken, and, getting back to the California legislative process, the oversight is a little bit different, but, at one of our hospitals, we received a retroactive immediate jeopardy from three years previously, and it had to do with -- it's just a different process in California, so it's not the first.

As she stated previously from a context perspective, within California, you know, one out of four hospitals either has received or is receiving an

immediate jeopardy, and, from a context perspective, it's all sorts of hospitals, everything from community-based hospitals to very well-regarded academic centers, UCLA for one, and then, you know, out on the east coast, Cleveland Clinic was in a process, where they had an extended period of time, where they had to deal with an issue.

This is something, obviously, we take extremely serious, and we have put forth the resources, additional resources to resolve it, not just to resolve this issue, but to put in process to making sure that we don't get into this situation again.

MR. ZINN ROWTHORN: I'll ask one more. I know Attorney Salton has a question. And I know this is not what anybody at that table expects, but I assume that, if, in fact, CMS participation was terminated, that that would have a material impact on at least those hospitals and maybe Prospect's financial condition generally. Am I right to make that assumption?

MR. CROCKETT: I think it would be right to say on any hospital that that would have an impact on it, not just Prospect, but any hospital.

It's rare that it happens, and this is really -- from a process perspective, CMS doesn't have

any way of doing what's called administrative penalties, so their only process of making sure that hospitals comply with the Medicare conditions of participation is it's all or nothing, and, so, from an all or nothing approach, is that when hospitals don't apply, then they issue what's called a termination track, in order to get hospitals back on track.

When you look at hospitals that haven't been able to resolve the issues, it's usually one of two reasons.

One is usually because they're in a process of going through a bankruptcy and actually don't have the resources, in order to resolve the issues that have been addressed, or, two, that they don't actually have the ability, and, so, it's very rare to actually see a termination, and we have 100 percent confidence that we will be able to resolve these issues.

MR. ZINN ROWTHORN: I gather that the quality issues identified by CMS are localized in two facilities, but the way the licenses are structured in California, that the immediate jeopardy is directed at six hospitals. Am I correct about that?

MR. CROCKETT: That is correct. So the license structure is that we have a consolidated license

for each of the two licenses in question, and there's three hospitals within each license, and there's a license process that what you have stated is accurate.

MR. ZINN ROWTHORN: Can you talk, and, again, I know this is not your expectation, as you just said, but can you talk about Prospect's ability to consummate this transaction financially, if, in fact, those immediate jeopardies were effectuated, given how this transaction is intended to be financed?

MR. ALEMAN: We could absolutely finalize this transaction. We're not looking for financing for this transaction and certainly carry through with the commitments as part of this transaction, including capital investments and so forth.

MR. ZINN ROWTHORN: Thank you.

MR. HENRY SALTON: If I could ask, being familiar with the findings in the two immediate jeopardies and in the continued finding of March 23rd of the immediate jeopardy and being familiar with the regional oversight by regulators here, would you be surprised that a regulator in this region would reach a conclusion of immediate jeopardy, based on these same findings?

MS. QUIRICI: I think so. I think so. I

think, again, we saw things that commonly we see in our surveys, so they were nothing that stood out that would be unusual, so I think that an immediate jeopardy related to most of the things that we saw would not have occurred here, and I haven't, again, seen that in my tenure.

MR. SALTON: And you're familiar, I think, I would assume, with the quality programs that are being done in ECHN, which now we understand are going to continue by the seller on a going-forward basis?

MS. QUIRICI: Yes.

MR. SALTON: For at least two years?

MS. QUIRICI: Yes.

MR. SALTON: Would you expect that the quality improvement programs that you have adopted would have prevented or greatly lessened the likelihood of these kind of violations at your two hospitals?

MS. QUIRICI: I think that we have a very strong quality program and a very strong regulatory program, so, again, I saw very similar things in the Rhode Island hospital when we went and visited, so whether they would help in California, is that what you're asking me?

MR. SALTON: Well I'm really trying to anticipate whether or not, and I think that Prospect has

acknowledged that the Los Angeles hospitals needed to upgrade their quality improvement programming and planning, I'm trying to say to you could we anticipate that this is a meaningful remedy, the continuation of the ECHN quality improvement programs, that it would most likely preclude or lessen the likelihood of these violations happening in our hospitals.

MS. QUIRICI: Absolutely. Absolutely. And we are very strong in survey readiness, so that, in and of itself, would preclude these things from happening here and have precluded them from happening here.

MR. SALTON: And let me ask just one final question.

MS. QUIRICI: Sure.

MR. SALTON: We're glad to hear whatever you have to say. In the March 23rd finding, where there were continued findings of problems with infection control, nursing services, I think patient rights, they had been identified in a prior survey.

Is your hospital's experience that you would have, is it common or rare, that you'd have a continued finding on a resurvey of the same types of non-compliance and conditions of participation that were identified in an earlier CMS survey?

MS. QUIRICI: In Connecticut, I have heard that hospitals have that happen, sometimes once or twice. It hasn't happened in my tenure that I've had that, and I have heard that in other hospitals. Sometimes, they are resurveyed several times if that is not corrected.

MR. SALTON: In the context of immediate jeopardy?

MS. QUIRICI: No. I don't know about that. I don't personally know about that, but as far as conditions of participation.

MR. SALTON: Okay, thank you.

MS. QUIRICI: Okay.

MR. ZINN ROWTHORN: And, to clarify, and then perhaps we can get off this topic and move on for the moment, but when you talk about differences between the regulatory environment in Connecticut versus California, you are talking about the same regulator and the same regulations, but talking about different regional applications?

MS. QUIRICI: That's absolutely right, yes. Different methodologies. There is a difference between the two, as far as how they function and how they run, so, yes, there are.

Again, I'm much more familiar with this

area of the country.

MR. ZINN ROWTHORN: Understood. Thank you. And I'll just highlight, bookmark. We heard that a concern in California was that there was perhaps too much localized control over quality, and there's now a commitment to backstop local hospital quality control.

We've also heard that there's a commitment to retaining ECHN's control over, localized control over quality, which, in light of this discussion, sounds like a good idea, so if you have other comments about reconciling those statements, I think we'd be pleased to hear them.

MR. CROCKETT: I'll start off. First of all, when we looked at -- one of the things that was important for us, as well, is looking at what their quality program was, and they provided us not only their quality program, but they provided us, in terms of patient satisfaction, risk management and multiple other practices, and we put that through in comparisons to how we have revised our quality program.

Getting back to your point, the program that they have currently for ECHN I think is a very good program, and I think that it would have prevented some of the things associated with it, so, from our perspective

it was an easy decision for us to adopt what they currently have and the commitment to maintain it.

Part of the reconciliation is quality is an ongoing thing that is evolving and changing, as well, and within our corporate oversight, there's two things that we actually will be taking on as kind of a corporate initiative, and it will be hospital-acquired infections and then, also, fall prevention.

So when we talk about corporate oversight and ensuring best practices, what we hope to do, not just for our Prospect hospitals, but, also, for ECHN, is for, in those specific areas, look to improve their performance on a go-forward basis, as well, and that is really kind of what the whole expectation is of the oversight.

DR. LEW: Perry, I want to just add another comment regarding separation and allowing the local hospitals to maintain, whether it be through an agreement, but, also, point to what we've done in CharterCARE in Rhode Island in supporting their initiative to become a high reliability organization.

I know Lester Schindel, the CEO of CharterCARE, I believe he was going to be here today, and we also brought in someone by the name of Kim Lumia from

Connecticut, who actually is supporting Les in this effort, so that's just a live example of how we support the local initiative to become a high reliability organization. Agreement or no agreement, this is what our model is going to be.

MR. ZINN ROWTHORN: Thank you. So we can move on.

MR. SPEES: Thank you. Good afternoon. I just want to make a few comments about some of the key commitments as part of the transaction from a transaction standpoint.

Some of these were touched on by Peter in his remarks, but I'll just amplify a little bit. The first two points are the key financial terms of the transaction, purchase price of $105 million and capital expenditures of $75 million.

What's significant about the purchase price is not just that it represents fair market value, but, as Peter mentioned, it really, when combined with ECHN's existing resources, allows all of the long-term debt of the health system to be paid off. That frees up over $9 million worth of annual funds that used to go to paying down debt and makes them available for reinvestment in the health system.

And with respect to the capital expenditure commitment, I think it's important to note that this is a minimum capital commitment on the part of Prospect.

We have access to capital, and we're in the business of investing capital in our facilities to help them grow and perform better, so while we've made this minimum commitment to the extent that there's a need and appropriate investment of additional capital, we have the resources to do that.

In addition to the financial commitments, we've made a commitment to maintain the current charity care policy, so that, as Mitchell mentioned in his presentation, Prospect really is about access and providing access to people, and this was a way to assure the community that the existing charity care policies will remain unchanged, or, if we do make any modifications, they will be at least as favorable, if not, more favorable going forward.

One thing that's really important to recognize in these transactions is that this is a very long-term commitment, so we're not just talking about what's going to happen in the next year or two years, but we're talking about 10 and 20 years down the road, and,

so, this commitment gives assurance to the community.

We also, as has been mentioned several times, while we're a California-based company, we're very committed to and understand that health care is a local business, and we provide corporate resources and support to really help the local management team and Board of Directors make the key decisions with respect to the day-to-day operations, and, so, we've committed to maintain management here locally and a local Board of Directors, which I'll talk a little bit more about in a second, and we've committed to the existing medical staff, so, as of the close of the transaction, all of the existing members of the medical staff will become members of the medical staff of Prospect Medical Holdings.

In addition, we've also made the commitment to maintain the services that are currently provided in the community, and our final commitment is to the employees, and we've committed that, as of the closing, we'll hire all employees in good standing.

That begs the question, as to what does good standing mean, which I will answer, and that is that we actually perform a single screen on the employees, and that's to make sure that none are on the Office of Inspector General's excluded list from participation in

the Medicare. That's the only condition to becoming an employee of Prospect Medical.

And then, as we've discussed earlier, we have signed this quality commitment letter, which, again, could be viewed as a very minimum commitment, and, as we've discussed on several occasions, you know, we're committed to grow and expand our quality care services.

A little bit about the local Advisory Board. This is really key for Prospect. As the local resource to assist our management team and our company in being the best community member that we can, we really partner with the local Board, and it serves as a resource to the governing Board on a number of matters, particularly providing input into the capital plan that we'll develop post-closing.

I just wanted to mention, with respect to the capital plan, that the $75 million, in addition to being a minimum, it's not just, you know, bricks and mortar and equipment that is part of that capital investment, so it's not necessarily capital in the traditional sense of accounting, but it's really an investment in the health care system, in total, and it will be likely, as part of our strategic plan, will be invested in increasing access points in the community,

whether that's through new urgent care or ambulatory centers, as Mitchell mentioned, or adding physician prospects and growing the physician network, maybe an investment in behavioral health resources, so that really is an investment in developing the overall coordinated regional care system in the community.

The local Advisory Board, in addition to providing input into that capital plan and our overall strategic plan, really will be responsible for much of the day-to-day oversight of key hospital programs.

Those include, particularly, oversight of all of the accreditation programs, so the Board will be, the local Board will be principally responsible to oversee the accreditation of the hospitals going forward.

It will be delegated authority on the medical staff credentialing, so all issues of medical staff credentialing will be handled by the local Board.

In addition, we will expect, you know, input and communication from the local Board, in terms of all of our growth initiatives, including physician recruitment.

And, again, recognizing that this is a long-term process, in the event there is any sort of leadership succession down the road, then we would look

to the local Board for participation in that process, as well.

MR. ZINN ROWTHORN: Can I ask one follow-up there, which is if you could talk a little bit about the process and time frame by which decisions will be made, as to spending down that $75 million capital commitment?

MR. REARDON: Hi. This is Tom Reardon. Everything is local. Everything starts locally, I should say, and, so, we will be consulting with the local Board and with the local management team, and they will create a strategic plan.

We'll push back. We'll have give and take on it, but it's a process that we go through. So, in Rhode Island, what we agreed to there, as I recall, and I may be wrong on the exact numbers, but my recollection is that we agreed that we would have a strategic plan within six months of close, and then we would sit down with the Attorney General's Office and orally present that plan, rather than put it in the public record, and I think we can make the same kind of commitment here.

MR. ZINN ROWTHORN: Do the transaction documents talk about a time frame by which that $75 million will be expended?

MR. SPEES: They do. The actual commitment in the purchase agreement is, within five years following the closing, the $75 million has to be invested or committed in some way to be invested.

MR. ZINN ROWTHORN: Thank you.

MR. REARDON: Again, I'm Tom Reardon. Let me comment on this slide 15. Please note that it says Health Care Delivery Model.

We are not a hospital-centered company. We're actually a physician-centered company that thinks about population management, and that's the way we approach things.

We really truly believe that it's better care for the community. We don't have to open everything. We will do a coordinated regional care program that includes community mental health, and surgery centers, and all kinds of different community providers to get the best care to a person at the lowest cost at the appropriate time, and that is our motto, and we think we do it very well.

Our model empowers local physicians. We partner very well with managed care plans, but even when managed care plans are trying to work with you, it's difficult for them to get to you the right data, and, so,

we have an infrastructure with respect to population management that does all kinds of things.

We even do claims processing, not because we think it's a very sexy business, but that's how we get the data, and when you get delegated functions from the managed care plans and you do analytics and you do medical management, the physicians actually know how to do this.

As much as the MCOs try to do it, they don't do it as well as the physicians and other community providers do it, so that's our motto. That's the way we approach it.

And the physicians really do feel empowered. I did see, Mitchell, by the way, that Les Schindel and Kim did come in. In Rhode Island, I would say maybe a third of all the physicians, primary care physicians that have joined the IPA there, have joined, because they love the model. It empowers them.

Rather than have a managed care company say, no, you have to have prior authorization, they're making those decisions how to best expend monies.

And the trouble with fee for services there's no money to do population management with real risk contracts, which is what we're talking about. Is

there money to do the right thing? And the physicians love it.

In terms of maintaining and creating local jobs, we're a growth company. We've never closed a hospital. We don't shrink hospitals. We grow hospitals. Sam Lee, our CEO, has a wonderful mantra; more and better for less. If we do a better job and we do it for less money, we're going to get more patients, and that's what we've seen over, and over, and over again. It really does work.

In terms of extensive corporate resources, John has touched on that, but we have all kinds of things. Because we've worked with a lot of safety net hospitals, we have really developed some very good data-driven management tools.

We're not talking about slash and burn here. We're talking about process reengineering, and there's all kinds of other corporate support that we can provide, in terms of savings on purchases of all kinds of material and the like, so there's a whole host of things we can bring.

Again, I'll go back to the CharterCARE example. My recollection, and Les can correct me on this, is, when we started at CharterCARE, all the

employees had a Blue Cross and Blue Shield contract. When we took over, all the employees had a Blue Cross and Blue Shield contract.

The difference was we're now self-insured, and my recollection is that we dropped something like $1.6 or $1.7 million to the bottom line, because of our ability to fund a self-insurance program, so there's a whole host of things we can bring to help the local management.

Again, maintain local leadership with regional oversight, all health care really is local, and we really support that with regional oversight. Whether it's quality or other issues, we will have input on these things.

Investing in capital and facility services and technologies, I'll go back to John's comments. Again, we're talking about a health care delivery model here, so it's not just about putting a new façade on a hospital. It's a whole host of things, in terms of creating this whole coordinated regional care network.

Charity care policies, yes, we've already talked about preserving charity care policies.

Could you go to that last slide, John, for me, please? Or second to last slide.

Why Prospect? Well we are committed to Connecticut. We really are into the northeast in a big way, and it's not just because I live in Boston and can drive down to Connecticut more easily than fly somewhere.

We have the two hospitals in Rhode Island. We're trying to acquire three hospitals in Connecticut. We're close to, well, we've already signed an APA. We're close to finalizing a deal in the Philadelphia region with five hospitals.

And why do we like the northeast? We like the northeast, because, frankly, there's very little managed care penetration in the sense that we think of, with real risk contracting and downside risk contracting and delegated functions.

If you look at the SIM, the State Innovation Model, and what Connecticut is trying to do, they're trying to move, as I recall, 80 percent of patients to value-based payments within two years.

Well we actually know how to do that. We've been doing it for 30 years, and you can't convince somebody overnight. With Blue Cross in Rhode Island, they came out to see us a dozen times. Well I don't know if it was a dozen times. They came out many times to see what our infrastructure looked like and what we did, and

they became convinced.

And, so, in Rhode Island now, we do have the first risk contract in the state. We do have a Medicaid pilot project, which reduces cost. We even committed to Blue Cross and Blue Shield, because the office of its Health Insurance Commissioner asked for a 15 percent reduction of premium product.

We've come together with them on a product that actually provides a 15 percent reduction in premiums for small groups, for small employers, so we actually do know how to save money by developing a coordinated regional care program.

So we actually think that, when you take a look at the metrics in Connecticut and Pennsylvania and Rhode Island, again, for every thousand patients, how many days will they spend in a hospital bed?

I don't recall the numbers in Connecticut, but I think it's like 1,400 days, and some of our hospitals were down in the 700s, so if you can keep a patient out of a hospital, but you can take care of them even better, with more dignity, in their home or in another setting, it's better for everybody. It really does work.

So we think we actually can help be

transformative in the way health care is delivered in Connecticut, and we're really excited about the opportunity.

The initial conversations with the physicians and the development of the IPAs are going swimmingly. We're pretty excited about it all.

So to the last slide, John? Again, we're all about the triple aim. You probably can't guess this from looking at me, but I've actually been around for a couple of years, and I joined Prospect about three and a half years ago, because I was so enamored with the model.

I actually do believe that this model can help move us toward a triple aim of higher quality, lower cost and higher patient satisfaction, so that's what we're about, and that's what we'd love to work with ECHN on, ECHN in developing here in Connecticut.

That concludes our Direct Testimony. Thank you for your attention.

HEARING OFFICER HANSTED: Thank you. Thank you, all. At this point, let's take a 15-minute break, and we'll go back on the record 15 minutes from now. Thank you.

(Off the record)

HEARING OFFICER HANSTED: Welcome back,

everyone. Thank you for that presentation. That was wonderful. We're going to go to OHCA's questions at this point, so I don't know who wants to start. Mr. Lazarus?

MR. LAZARUS: I will. Good afternoon. Steven Lazarus. I'm going to address the questions possibly to one or two people at a time, and you're welcome to bring up anyone --

VOICES: Microphone.

MR. LAZARUS: Can you hear me now?

HEARING OFFICER HANSTED: Move this up a little bit.

MR. LAZARUS: Is that better? All right. Mr. Crockett, in your testimony, you say that PMH now has hired a Chief Quality Officer, a Clinical Officer, Senior Chief Nursing Officer and a VIP Regulatory and Patient Safety person. When were these positions filled?

MR. CROCKETT: The Chief Quality Officer position, actually, her first day is on April the 4th, Monday, and the other three positions were filled approximately about 45 to 60 days ago, and they're currently working on the resolution at our two facilities as we speak.

MR. LAZARUS: And how were these duties and responsibilities covered before filling these

positions at PMH?

MR. CROCKETT: At the corporate level, we really didn't have the positions, and, so, it was delegated to the local entities to a certain degree, and, so, what we're hoping to do with these positions is to provide the additional oversight in making sure that, as the goals are either being met or not met, that we look at resources that are being expended and provide them as necessary.

MR. LAZARUS: What will these positions bring to mitigate an occurrence of immediate jeopardy in our Connecticut hospitals?

MR. CROCKETT: Part of the issue that we got cited on was that the Quality Assurance and Performance Improvement Plan wasn't dynamic, and, as the organizations were experiencing the difficulties that they had, it wasn't modified to address those issues, and, so, they came in and they saw the quality programs off to the left, and the organization was moving in a separate direction going forward.

As organizations go through their various accreditation surveys or they have issues arise associated with any type of other surveys, those findings are inputted into a quality program, so that you can do

the monitoring and the compliance to those things on a go-forward basis.

To be blunt, that's what did not occur within our quality program at the facilities. They continued to be monitoring things that were not outdated, but just not completely as relevant, so lesson learned. This is to make sure that the quality program is updated not just once a year, but actually whenever the issues need to be updated, and that's actually one of the things that we're hoping to achieve with these individuals.

MS. KIM MARTONE: Kim Martone, OHCA staff. You had stated in your testimony that you're currently revamping the QI QA program?

MR. CROCKETT: Correct.

MS. MARTONE: Can you give us a summary at all, in terms of what it contains, when it will be available, who is involved in revamping it?

MR. CROCKETT: Yeah, sure. If we haven't already provided you with the Quality Assurance and Performance Improvement Plan, we can do so, and we will be happy to do so.

It started off with two issues. First, making sure that the 2016 national patient safety goals are addressed associated within the quality program, and

that's more from just a kind of an oversight umbrella.

Specifically, each of the two organizations within that, you know, the issues that have been addressed or identified in the current CMS survey are included in the program, so, for the one facility, we're looking at temperature and humidity, we're looking at infection control, we're looking at nursing services.

For the other facility, once again, we want to make sure that the quality program is not a cookie cutter, and, so, it's modified to the issues specific that were at the LA Community facility.

The other aspect associated with the quality program is making sure that each of the different departments have a quality measure that they're participating in, as well, and that was another deficiency that we had, which is that we had -- that wasn't seen as being completed from a house-wide perspective, and, so, with that, you should see a comprehensive program to monitor.

MS. MARTONE: Okay.

MR. LAZARUS: Can you please identify each of the individuals, and tell us what experience do these individuals have in working with large health care systems and ensuring quality improvement, patient safety

issues of the hospital networks?

MR. CROCKETT: Sure. The Chief Quality Officer has just previously held a position as a divisional quality expert for HCA. I believe it was over the western division for HCA. I don't know the exact number of hospitals, but it was for about half of the company.

With that, she had the responsibility for the quality program, oversight, patient safety and developing the policies and process and reporting tools and kind of assuring of best practices within the HCA division, and that will be the Chief Quality Officer.

The Chief Clinical Officer previously was in a similar role for Kindred and was responsible for the clinical effectiveness of nursing care for the Kindred Corporation.

The background for the Corporate Chief Nursing Officer, she's from the east coast and has held multiple Chief Nursing Officer roles within various companies, and I can provide further background associated with her.

The position for the regulatory affairs and patient safety has also extensive experience, and I don't know it off the top of my head, but I can provide

that, as well.

MS. MARTONE: Yes. If you could provide us a late file of their resumes, we'd appreciate it.

MR. CROCKETT: Yeah, I can do that. It's not a problem.

HEARING OFFICER HANSTED: I just want to clarify the record. The resumes will be Late File No. 3, and Late File No. 2 will be the Quality Performance Improvement Plan that you referenced earlier.

MR. CROCKETT: Actually, more than likely, it would be 2, because, as I said, they're two different plans; one for the LA community and one for the Southern California hospital.

MS. MARTONE: Could you just make sure they're dated, as well, so we know the date that they're actually going into effect?

MR. CROCKETT: Sure.

MS. VOLPE: If we're numbering late files, I believe ECHN wanted to submit an outline, as well, as part of the late file.

HEARING OFFICER HANSTED: The time line is No. 1.

MS. VOLPE: And 2 is the CMS?

HEARING OFFICER HANSTED: Two is the

Quality Performance Improvement plan or plans, and No. 3 are the resumes.

MS. VOLPE: Okay and we'd also like to submit the Corrective Action Plan we mentioned that's due on or about April 8th into the office regarding CMS's corrective action.

MR. CROCKETT: And that's for the LA community license resurvey.

HEARING OFFICER HANSTED: Okay, so, the Corrective Action Plan will be Late File No. 4.

MS. VOLPE: Great. Thank you.

HEARING OFFICER HANSTED: Thank you.

MS. MARTONE: And just one more question. Do you anticipate any changes to those quality assurance plans, based on any -- these surveys, the results of any of these surveys?

MR. CROCKETT: You mean in terms of the ones that were just revised?

MS. MARTONE: Right.

MR. CROCKETT: Well that's actually one of the things that we're going to do differently. As any issues come up that are new, we're going to modify the program, so the answer is that, in any hospital that we have, as issues are identified from a CMS perspective,

the quality programs will be adjusted to make sure that the monitoring goes, so the answer is yes.

MS. MARTONE: Okay and then, as Chief Quality Officer, she obviously, or he, will have a say? I'm assuming will be assessing the hospitals and the quality of programs, and is there anything she's going to be doing when she begins or he begins next week, in terms of reevaluating these current issues and challenges?

MR. CROCKETT: Yeah, several things. The first issue is that we're going to be asking her -- she'll be looking at -- her name is Debbie Barry, but she'll be looking at any of the former either Joint Commission and/or survey results that the facilities had and looking at the responses that they had, and the question is were the responses appropriate, and were they compete, and, more importantly, are the facilities continuing on with the work that they had said that they were going to do with the correction of these facilities, and that's, obviously, for all of them, all of the Prospect hospitals.

Obviously, we've got the two that are the most important at the moment. That it will be her role of making sure the compliance with our plan of corrections to CMS.

MS. MARTONE: Thank you.

MR. LAZARUS: What is PMH's plan to contract with a patient safety organization if they acquire ECHN?

MR. CROCKETT: At the moment, what we have committed to is to continue to -- any quality programs that they have currently in place we're going to maintain that.

In terms of future plans, that will be done in conjunction with the local Advisory Board and with ECHN in consultation with direction from our Chief Quality Officer.

MR. LAZARUS: As a result of the survey, I think it was in your testimony that PMH hired a consulting firm to review the operations and policies and the procedures in California.

Based on the recommendations, PMH implemented new ones. Can you please elaborate on findings or recommendations of the consulting firm? What new policies and procedures were implemented?

MR. CROCKETT: There's actually a couple of things, and let me just talk about the process first of all, then I'll get into some of the more specifics.

There were two things that were occurring.

The first one that was alluded to is that the hospitals recently, in the past couple of years, have gone through a license consolidation, and, as part of the license consolidation, one of the things that's important is making sure that the policies are consistent within that license, and, so, the first thing that they were looking for was making sure that the facilities not just only had a consistent policy, but they were actually practicing consistently to the policy, so that was number one.

The second thing that they looked for is that they would take a look at the policy, specifically, as it related to the Medicare conditions of participation, and what had happened over a period of years, we've gone through multiple surveys by various regulatory agencies, is they had taken a base policy, and whatever the issue at the moment was was that they would add on top of it, and it became an unworkable policy that was really kind of a configuration of multiple past surveys that they thought there were doing right.

And what happened, specifically associated with like our temperature and humidity issue, the intent of what was put in our policy was, for the right reasons, was unworkable.

Specifically, our policy stated on

temperature and humidity that the organization was to check the temperature and humidity every hour and make adjustments accordingly, and that's regardless if there was a surgery being performed there or not. The practice is is that that's actually not a CMS condition of participation, nor is it a requirement, so when they looked at our practice and saw that it wasn't consistent with our policy, we got cited for it, in addition to other things.

So they went through all of our policies and looked at the operations of the organization, streamlined the operations consistent with CMS participation, so that, as we practice, that we're going to be consistent with them, so using the temperature and humidity as an example, it was revised to reflect that we check the temperature and humidity at the start of the day, which is about 4:30 in the morning, and make adjustments, if it's necessary, associated with that, and then we then check the temperature and humidity before each case, making sure that there's proper versus what we had in the past for checking every single hour.

They went through all of our policies related to nursing care and made similar type of adjustments. The total number of policies that were

changed, I don't have it off the top of my head, but I believe it's over 45 of policy modifications that were recently inputted.

MR. LAZARUS: Based off the 45 policies that were modified, are any of these policies and procedures that were specific to California are they going to be implemented in other PMH hospitals that are in Texas and Rhode Island?

MR. CROCKETT: At the moment, we're actually focused just on California, and, once we have our Chief Quality Officer and we get past our survey status and we have the individual in place with her team, the anticipation is then we take our revised policies and take a look at, then, the policies at the other facilities and identify if there's streamlining that needs to occur and/or are they adherent to the policies, and that would be kind of a step two that would happen down the road.

MR. LAZARUS: Okay, now, who is the consulting firm that you had hired?

MR. CROCKETT: We hired two. The consultant firm is called the Greeley Company, and you can either find them on the web or we can provide the information, but it's a nationally-recognized firm that

works with CMS, and then we hired a local law firm, called Hooper and Lundy, so, in tandem, the two of them are assisting us in our response back to CMS.

MR. ZINN ROWTHORN: When you say work for CMS, do you mean specialize on CMS-related issues?

MR. CROCKETT: Specialize in CMS, in resolving issues when hospitals get sideways with CMS.

MR. ZINN ROWTHORN: Okay, thank you.

MR. SALTON: So is that the firm that did the review, your comprehensive review, or are they just doing the review for CMS purposes?

MR. CROCKETT: It is the same firm. They're reviewing the policies, and they also were responsible for the redefining and the development of a quality program, the Quality Assurance Program, as well, as well as in assisting us in our response back to CMS, and they're still on site and will continue to be on site until we resolve and pass the survey.

MR. LAZARUS: Now PMH has agreed to maintain the respective quality programs that you just stated for two years. Can you explain why two years?

MR. CROCKETT: Simply, there really isn't actually a magic number to the two-year mark. It was more of an issue of starting off with a transaction of

taking a look at their quality program, and the question is will PMH change their quality program or maintain it, and the answer is, very simplistically, we took a look at it, and the answer was that they have a great program, and we don't anticipate making any changes to the program.

The issue of why the two-year mark, the answer always gets back to the question of how do things change within the health care industry within two years and what new things will occur, and we want to make sure that, as we improve Prospect's quality program, that we don't have an entity that is going to be isolated, so it was strictly that.

It is meant to be a placeholder, and then, as the organizations have worked together for two years and we moved forward, it was just a placeholder, is really what it was.

MR. LAZARUS: Okay. You also submitted a quality assurance commitment with ECHN at the beginning of the hearing. Could you talk a little bit about that and discuss it from the details incorporated in there?

MR. CROCKETT: Yeah, so, the commitment is several fold, and it really, then, or I think relates back to one of the original questions that we had just

before the break, which is how does the local leadership, as well, comply with kind of a corporate oversight, and I think the three of them kind of tie together.

The commitment starts off with this is it. There's multiple things that ECHN is currently doing on their quality program. A, their quality program, two, the level of staffing that they have associated with it and the people that are doing it, three, they're participating and have been long participants in the high reliability organization, and they've got some other internal programs related to patient satisfaction, risk and some other of those measures.

So the commitment we have is not only just to maintain the program, but to, A, maintain staffing and/or improve the staffing and maintain all the current things that they're currently doing.

The other thing is that, from their visit that they had when they went to Rhode Island, there were some things that our CharterCARE facility was actually doing that they would actually like to bring down to ECHN, so our commitment to them is that anything that we're doing in any of our other organizations then we will make sure that the right resources are brought into ECHN, as well, too.

So, very specifically, how we look at the quality is that we're going to, A, maintain it, and, two, anything we do to change it is going to be an add-on, and it's going to be done in consultation with ECHN.

MR. ZINN ROWTHORN: Steve, can I ask one question?

MR. LAZARUS: Yes.

MR. ZINN ROWTHORN: I meant to ask you before. You referenced that designation of high reliability organization a couple of times. Can you tell me what that is? Who bestows that? What it signifies?

MR. CROCKETT: Yeah. A high reliability organization it's actually a formal program that an organization commits to, and it's a long-term commitment, and the goals of a high reliability organization are to make sure that the processes that are put into place protect the patients and provide a safe environment for the patients to receive care.

It's a significant commitment, not just in financial, but in organizational time and energy associated with it, and it looks at not only the processes that are occurring in the organization, but, more importantly, making sure the organization is committed to understanding when it doesn't work and

fixing the processes, so that the organization becomes consistent in how the care is actually being delivered and reducing the variability and improving the outcomes.

And, so, organizations that participate in it, they do go through outside training specifically to it, and they go through outside audits to make sure that they are continuing with what they're doing and the reporting associated with it.

We actually have seen, you know, I think the Connecticut facilities this is an initiative that's been done for a while now in Connecticut. We were introduced to it through our work with CharterCARE in Rhode Island, and, over this past year and a half, we've been so impressed with the work that they've done up in Rhode Island that we're looking now to actually roll it out into our other facilities in California and Texas.

MR. ZINN ROWTHORN: It's a privately granted accreditation?

MR. CROCKETT: I don't know the answer to that.

MR. ZINN ROWTHORN: It's not a government designation?

MR. KARL: No. No. You volunteer to become designated as an HRO. Just if I can put it in a

nutshell, if you don't mind, the State hospitals would commit to a CHA, Connecticut Hospital Association, committed to becoming a high reliability organization, and it almost, again, in a nutshell, it almost follows the pilot's checklist, okay? Anyone can stop the line. It goes all the way down to the issues that we deal with with the right side surgery, correct side surgery and so on and so forth.

It empowers everyone in the organization. If they see something that doesn't seem to be happening that's appropriate, they can put their hand up and stop it, without any type of repercussions, whether they're telling a physician you need to stop here, I think we have a problem, and that's in a nutshell what HRO is.

MR. ZINN ROWTHORN: Thank you. That's all.

MR. LAZARUS: I have a couple of questions for Ms. Dorin. You had testified that you visited PMH hospitals in California. Which ones did you visit?

MS. DORIN: We visited Southern California at Culver City.

MR. LAZARUS: And you reviewed documentation you had mentioned earlier at those hospitals?

MS. DORIN: Not there. We reviewed documentation on our visit to the Rhode Island hospitals.

MR. LAZARUS: Okay, so, what did you review at the California hospitals in your visit?

MS. DORIN: Well it was actually I would say it was more of a visit than a review. I mean there were several of us from ECHN and several Prospect members that went to the hospital.

We spoke with a number of different departments, and we did some site tours. We were on a couple of different floors of the hospital.

MR. LAZARUS: So what was your goal for visiting the hospitals in California?

MS. DORIN: Well, as part of the process for selecting an acquisition partner, we felt that we really needed to sort of see what was going on firsthand and in person, so that was the primary intent, to go out and put, you know, faces to names and to see how employees are operating in the hospitals.

I don’t mean operating in the traditional sense, but, you know, as a sort of walk around the floors, and we had an opportunity to speak to people extemporaneously to get their thoughts on how it was working for a Prospect hospital. We spoke with doctors.

MR. LAZARUS: When did you visit?

MS. DORIN: We visited last May, May of 2015, and we visited the CharterCARE hospitals in June of 2015. June of 2015.

MR. LAZARUS: When did PMH first bring to ECHN's attention the problems it had at the Southern California hospitals?

MS. DORIN: That's on the timeline, and that is in -- they called February 1st?

MR. KARL: Yeah. If I can answer? February 1st, I was informed by Mr. Reardon that they have some issues regarding inspections at a couple of hospitals out in LA.

MR. LAZARUS: Okay and that's the timeline that we're going to be getting as a late file?

MR. KARL: Yes.

MS. DORIN: Yes.

MR. LAZARUS: Thank you.

MS. MARTONE: Ms. Dorin, Kim Martone, OHCA. Would it be possible to provide any records or reports, findings from the quality evaluation team? Is there anything generated from that? That would be appreciated.

MS. DORIN: Sure. Sure.

HEARING OFFICER HANSTED: Okay. That will be Late File No. 5.

MR. LAZARUS: Ms. Dorin, you had mentioned a collaboration by the eastern region hospitals on the quality issues in your testimony. Can you elaborate on the structure of the structure, and who will comprise -- who will this collaboration team -- what would it be comprised of, what individuals?

MS. DORIN: I would say that that is probably to be determined at this point, but, as we have been talking with Prospect and as our quality team had visited with the CharterCARE hospitals in Rhode Island, we saw great opportunities to further collaborate and share best practices, and Prospect is committed to doing that, as I believe Von referenced and Tom, also.

MR. LAZARUS: All right.

HEARING OFFICER HANSTED: Maybe, just for the benefit of the public here, could you just go through and summarize the timeline that you're going to submit to the panel?

MS. DORIN: Well it's six pages.

HEARING OFFICER HANSTED: Okay.

MS. DORIN: I'd be glad to.

HEARING OFFICER HANSTED: I'm sorry?

DR. O'NEILL: It's sort of a blow-by-blow timeline of what we did once we knew about the IJ issues at Prospect and everything that we did internally with our management team and the Board.

HEARING OFFICER HANSTED: Okay.

MR. KARL: I'll just walk you through a couple of points, if that would be helpful.

HEARING OFFICER HANSTED: That would be helpful, and, for the public that's here, this document will be on OHCA's website if you want to review it in detail.

MR. KARL: So I'm going to condense when we first heard about it, because what we needed to do, again, internally is take a deep dive into the inspection documents.

There's a data room that was downloaded to us that has thousands of pages, and the quality team jumped all over that.

I, then, on February 19th, I met with the Board Chair, Dr. O'Neill, and Vice Chair, Joy Dorin, to discuss the or disclose the regulatory issues in California.

Dr. O'Neill stated that he felt it would need to be brought forward to the Board of Trustees.

There was a meeting with the Board of Trustees on the 25th of February.

The Board of Trustees, at that point, brought forward and appointed a subcommittee of the Transaction Committee, led by Joy Dorin, the Vice Chair, because she was also the Chair of the Transaction Committee.

We brought in our QI experts and, also, our attorneys. They went through a significant due diligence process. On March 2nd, we had detailed phone conversations with those individuals from PMH, Von and so on and so forth.

We then also did a deep dive into, you know, is there any concern, as it relates to any of the equity partners, you know, something like this would occur, and we also looked at that.

Then, on March 4th, our quality team went up to Rhode Island, Our Lady of Fatima and Roger Williams, did a detailed deep dive into their quality program, and, when they came back, they were extremely impressed with the additional resources that were brought forward at CharterCARE that we felt could help bolster some of our quality programs in Connecticut.

They, of course, were very interested in

HRO, because the Connecticut Hospital Association is contracting with the Rhode Island Hospital Association to roll out the HRO initiative.

We, then, again went through detailed meetings twice week, Board members, the Transaction Committee with Prospect. We reviewed all of the inspections. Also, the immediate jeopardy, did some comparisons about how regulators do inspections out in California versus what happens in Rhode Island and Connecticut.

We, then, had a special Board meeting on the 23rd to discuss all of our findings, this is March 23rd, and we felt that our concerns were satisfactorily answered. We created that side letter that obviously is an exhibit, and we will continue to follow-up with, obviously, the responses to the findings.

This is going to be prolonged. This isn't something that CMS is going to come down and say, okay, it's all over with. It's going to be prolonged for a while, so we had agreed to stay very close to that.

The side letter, you know, I guess I would say this. We feel very strongly about our quality program. Obviously, we received awards. Connecticut has a different handle on quality than some of the other

states.

The issue that I think we're dealing with here, as we created this side letter, we wanted some type of written commitment from Prospect that they're not going to jump in and mess with our quality program, and the two-year period was, you know, Joy said she wanted five years, and, you know, a lot of other people said, you know, two years, three years, and, again, it's not really the timing period.

It's a matter of we thought two years would be enough time for the Chief Quality Officer at corporate to get her feet wet, to take care of the issues that happen out in California, to better understand regulatory issues, as it relates to the Texas hospitals, the Rhode Island hospitals, the Connecticut hospitals, and, also, then, form, as they do now for a lot of other scorecards for performance measures, to then have, whether it's weekly or biweekly, calls between all of the quality leaders to do some comparisons and, also, to match outcomes to see who is doing best practices and so on and so forth, so that's kind of it in a nutshell.

HEARING OFFICER HANSTED: Okay, thank you.

MR. SALTON: Can I ask a follow-up question on the remit? Maybe just take a minute on that?

The first provision provides they're going to maintain your programs for two years, the second provision talks about maintaining the QA program. Consistent with best practices in the programs in Rhode Island, which one will govern if there's any consistency?

MR. KARL: That's a great question. If we're following -- much of this is, obviously, the federal HCAHPS CMS, HCAHPS.

Those that pertain to Connecticut obviously will be following ours. Those that pertain separately to Rhode Island will follow by the Rhode Island hospitals.

I would say this, because this is, again, this is brand new, so speaking just from my lips, we have to form an eastern region quality program, and not necessarily even an eastern region. It really has to be a Connecticut and a Rhode Island, so we better understand quality services, so we can do some local comparisons versus nation comparisons.

DR. LEW: Henry, if I could just add, you know, from corporate, if what is happening in Connecticut, as you say, if there's not a meeting of the minds, if it's working, we don't want to come and mess with it.

We're certainly here to support everything that they're doing, and, as we fix our issues in California and our Chief Quality Officer gets on board and really understands extremely well what's happening across segments, you know, I'm sure she'll be able to offer some input and support, but whether we're talking about quality, or business development, or recruitment, or staffing, we defer to the local leadership, and if it's working, there's no reason for us to fix it.

MR. SALTON: Okay. The agreement also provides there's an acknowledgement by Prospect that, following the closing, the local Board, I assume that's the Advisory Board, will have oversight over the quality assurance program.

By oversight, does that mean that they have actual delegated authority, or they're just going to be reviewing it and reporting in an advisory way? I'm not sure what oversight means.

From a regulatory perspective, oversight means one thing. From an advisory concept, it means something else.

MR. CROCKETT: Delegated.

MR. SALTON: Would you elaborate on it for the record?

MR. CROCKETT: Yeah, so, the way that we have reached the agreement is that, obviously, the corporate Board has ultimate responsibility for the financial and quality of any organization, and, with that, there are going to be a delegation of physician credentialing, as well as the quality program to the local Advisory Board.

The local Advisory Board will be made up of physicians within ECHN, as well as some community members associated with that.

MR. SALTON: Have you done a delegation like this in the other hospitals?

MR. CROCKETT: We do, at CharterCARE.

MR. SALTON: Could you give us a copy of that delegation, so we can see that if that's the model?

MR. CROCKETT: I believe, yeah. I think we can.

MR. SALTON: Okay.

HEARING OFFICER HANSTED: That will be Late File No. 6.

MR. SALTON: That's all I have right now. Thank you.

MR. LAZARUS: I'll address the next couple of questions towards ECHN. It's mentioned in the

responses to the pre-hearing questions that ECHN reviewers visited PMH's Rhode Island hospitals as part of its quality review investigation and found that the quality programs had been enhanced in notable ways since Prospect's acquisition.

Can you elaborate a little bit on that and provide some examples?

MR. KARL: I can. Again, I'm going to ask Linda Quirici to come up, please. She was the one, who headed up the inspection.

MS. QUIRICI: So this is for the Rhode Island hospitals, correct?

MR. LAZARUS: Yes.

MS. QUIRICI: Okay, so, myself and two experts came with me on March 4th. We visited both hospitals, which is Roger Williams and Our Lady of Fatima, and we met with the Quality, Safety and Risk Departments and Infection Control, so those are the areas that we concentrated on in both hospitals.

So some of the enhancements that we saw that we were quite excited about, to be honest with you, is PMH brought safe transitions of care, which has significantly reduced their readmission rates. Pharmacists and an LPN were brought on board for follow-

up calls, and they saw a significant decrease in their readmission rates, and that's something that all hospitals are looking at for the betterment of the patient, as well as that's something that CMS looks at, so we really were interested in that.

They are integrating the two hospitals, eliminating duplication of services, which is much more efficient, so that was great.

We saw a huge investment in the renovation of the two hospitals with the patient in mind. They were improving all their handicap access. In places where they had stairs, they were now putting handicap access and elevators to help with handicap, so that it was with the patient in mind.

They improved lighting. They had single rooms, which is much preferred by patients, open concept nursing units, which is definitely best practice for patient care, and they had plans for future renovation there, as well, looking for new emergency departments, etcetera, so we saw physically a lot of construction going on, a lot of improvements in both hospitals, so that's great, and that would be a great help to us, as well.

So they've integrated some of their

departments. They have a very robust quality department. They've supported new positions to ensure that the quality standards and metrics are met.

PMH recognized Roger Williams focused on quality and safety and supported that process that was already in place, which is what they're planning on doing for us, as well, and they increased their staffing and patient satisfaction area, which is great to hear, as well, because that is, you know, patient experience, patient satisfaction is very important. It's something that Eastern Connecticut Health Network is working on, so, again, we're looking for similar kinds of improvements here.

Let's see. We did see their quality improvement diagram, which was very good, how they report up to the Board, which that was great, and, in speaking with the Chief Nursing Officers at both hospitals, PMH allowed autonomy in managing the departments that are meeting their performance measure, so if they're doing it right, you know, they're encouraging that, and those departments that are not meeting expectations are assisted by this corporate oversight that they've talked about, so that's kind of the best of both worlds.

PMH assisted the hospitals in pursuit of

certifications, things, such as stroke, diabetes and total joint replacement. They have a good outreach for primary care doctors and started an IPA there, which has been very helpful.

They were in the process of developing the various VP positions for oversight of the PMH systems, so that was in place, and this is the local leadership talking to us about that. It wasn't PMH. It was the local leadership talking to us about that.

Okay. They provided tools to assist with staffing and productivity, so to make sure that they were efficient, and that was great. They look at processes, PMH looks at processes through evidence-based standards. They analyze cost and outcomes to choose the best pathway, which is best practice, and that's something that we would want to do.

They support a multi-disciplinary review of any events, which is great. They had strong legal support, which the hospitals felt was very helpful. They improved processes in recycling and reprocessing with the support from PMH.

Infection control, there was no cutting corners in infection control, and that was really great for me to hear, because as PMH is putting it number one,

really that's something number one in our organization, as well, and that's in our safety plan, I mean our quality plan for 2016.

So they had a very robust Infection Control Department. Again, fully staffed at both, and I looked at all the job descriptions, and they talked about their processes. Very solid. Very solid. Something that, again, we'll want to talk with them more about as we go forward.

Okay. The other thing is they provided their metrics display and organized dashboard. There was really great dashboard from these two hospitals that looked at all their quality measures and put their targets, you know, what their benchmarks are and what their scores were, so you could very clearly see it was very organized on an Excel spreadsheet, and we're, again, hoping to emulate that, so we had a great visit.

MR. LAZARUS: Thank you. As part of the quality assurance commitment, are these some of the recommendations you're looking to implement say in the next two years at ECHN?

MS. QUIRICI: Well, as part of that, and I think it talked about it, that these things will be available to us, we'll communicate with them, you know,

as we have done, and their best practices we'll adopt those, and they'll adopt our best practices, so, again, the best of both worlds to share between the hospitals.

MR. LAZARUS: All right, thank you.

MS. QUIRICI: Okay.

MR. LAZARUS: As a result of ECHN's investigation into the compliance and quality issues connected with PMH's California hospitals, did ECHN consider asking PMH whether its local Advisory Board could have authority than presently where it would only recommend authority to ensure ongoing quality care to ECHN hospitals? Would you like me to repeat the question?

MR. KARL: Would you please repeat that?

MR. LAZARUS: Yeah. As a result of ECHN's investigation into the compliance and quality issues connected with PMH's California hospitals, did it consider asking PMH whether its local Advisory Board could have more authority than presently to ensure ongoing quality of care at ECHN hospitals?

DR. O'NEILL: We didn't consider that, specifically, as you've phrased it, but what I think -- see, we tried to consider how this is going to work out practically speaking, and, right now, our Board, the

Board of ECHN, has a lot of input into the quality standards that the organization has.

In the future, the Advisory Board is going to have a similar practical role. In other words, the Advisory Board consists of physicians and community members. One of their main roles is to oversee quality and patient safety, so if Prospect is reassuring us that our quality program will be supported, then it will be implemented through the interaction between the Advisory Board and the management team.

So when the Board looked at it, you know, over the past four months, or four weeks, ever since this started, we felt that we had the assurances that we needed to make sure that we were going to maintain quality for the next five years, let's say. Did you want to add something?

MS. DORIN: And beyond, because the commitment letter, you know, does -- oh, okay. Right. So the local Board, the responsibilities the local Board are actually enumerated in the asset purchase agreement, and it says, and I'm reading from page 63, "The local Board shall, among other things, serve as a resource for buyer with respect to buyer's investment of the capital commitment, maintenance and implementation of the

strategic business plan, and be responsible for medical staff credentialing at the hospitals, maintain and oversee the quality assurance programs at the hospitals, and oversee and manage the accreditation process for the hospitals."

MR. ZINN ROWTHORN: But I think what we've just heard is that there's a delegation of actual authority to the local Board with respect to quality issues, is that correct, beyond an advisory capacity?

MR. CROCKETT: I think I understand your question, but I'm not exactly for sure.

A MALE VOICE: Do you want to restate it?

MR. ZINN ROWTHORN: Yeah.

A MALE VOICE: Maybe say it another way?

MR. ZINN ROWTHORN: I think we've heard a little bit about just now about what the asset purchase agreement talks about with respect to the Advisory Board's authority. Subsequent to that, we have the side letter agreement, and your answer, Mr. Crockett, to Attorney Salton's question, which was that there is a delegation of authority on quality issues or will be to the local hospitals, similar to what's done in Rhode Island, is that correct? And that's a delegation, not just advisory authority, as contemplated in the asset

agreement, but actually authority.

MS. VOLPE: I think Mr. Crockett testified that, for physician credentialing, there's certainly a delegation of authority.

MR. ZINN ROWTHORN: I think it was beyond that.

MR. CROCKETT: Well, for the two-year period, I mean what we have committed to is that we're not going to be modifying the program, as setup currently, and only looking to actually enhance it.

MR. ZINN ROWTHORN: Okay. We had a colloquy a few minutes ago about what paragraph two in the side letter means when it refers to local Boards having oversight over the quality assurance program and what oversight means in that context, which was as the answer when a delegation of authority.

MR. SALTON: As opposed to merely oversight, and I think, when we spoke, I said there's advisory and there's authority with oversight, and you said, and I want to clarify this, because this is important, you're delegating actual authority for them to have oversight, meaning something comes up, and the local Board says, wait a minute, we don't want to be here, we want to be over there, or are you saying this is just an

advice, and the management of the hospital, which you guys will now have control over, will decide whether to follow that advice or is it actual authority over the quality assurance program, not accreditation?

MS. MATTHEWS: I'm sorry. I mean if you do look at the language in here, it is serving as a local resource with respect to the investment in capital, of the capital commitment, but then it does end the maintenance and implementation, but then it's actually the local Board is to be responsible for medical staff credentialing and maintain and oversee quality assurance programs, so we read that as a real delegation of authority on those matters, as opposed to serving as a resource and advisory in connection with the spend on the capital commitment.

MR. CROCKETT: Actually, let me read through the actual words.

MR. ZINN ROWTHORN: I just want to put on the record, Attorney Matthews, you were reading from what document?

MS. MATTHEWS: I'm sorry. I was reading from the asset purchase agreement, Section 5.27 of the asset purchase agreement.

MR. ZINN ROWTHORN: Thank you.

MR. CROCKETT: And, so, that's now been updated with a side letter, and I want to just read the one sentence that actually speaks to I think what would be termed a definition of delegation specific to this, and it says that "Buyers shall not implement any modification to the seller of quality programs without first obtaining the approval of the local Board for such modifications, which approval shall not be unreasonably withheld." That's what we tried to do to actually define the delegation.

MR. SALTON: So that's distinct from the end of the prior section, where it says, the end of paragraph two -- do you have letter in front of you?

MR. CROCKETT: I do.

MR. SALTON: "The local Board shall have oversight over the quality assurance program," so is that -- we're trying to figure out how these things interplay, if they do at all.

MR. CROCKETT: Well we're hoping that they overlay each other, not in conflict, which is that the local Board shall have oversight of the program, and the point of paragraph three was to clarify what the role of the oversight was, which is that Prospect cannot make any modification to the program.

MR. SALTON: Okay, so, that's clear. I understand there's obviously a difference there, because, in one instance, you could say status quo, we can't change status quo of the program, as developed by the hospitals, but then the local Board might want to go beyond status quo and not really change it, but maybe augment it or do other kinds of things, decide that more resources are necessary, without changing the program, but that might be considered within the scope of oversight, but what you've clarified, at least from your understanding, and I hope that's what the hospital's understanding is, also, is that, in fact, the oversight merely means what paragraph two provides, which is change in the status quo, without approval of the local Board.

MR. CROCKETT: That's our understanding.

DR. O'NEILL: That's our understanding.

MR. SALTON: Okay.

MR. LAZARUS: The next questions actually have to do with the topic of community needs health assessment.

PMH states in the application that it will support and implement ECHN's community needs health assessment plans through 2016. What does that actually mean by that? I believe that's on page 2178.

MR. KARL: Dennis McConville will respond to that.

MR. LAZARUS: Sure.

MR. DENNIS McCONVILLE: Steven, may I ask you to please repeat the question?

MR. LAZARUS: Sure. PMH states in the application that it will support and implement ECHN's community needs assessment plans through 2016.

MR. McCONVILLE: Yeah, so, filed with the application were the highlights of our community health needs assessment plan that was conducted by ECHN, and we continue to implement that plan and the programs associated with that plan, and Prospect has agreed to support us in that ongoing effort, but, at the same time, it's about time for us to conduct a new community health needs assessment, and that is our plan, and we anticipate that that be supported by PMH.

MR. LAZARUS: And PMH is in support of that?

MR. McCONVILLE: Yes.

MR. LAZARUS: Okay.

MR. ZINN ROWTHORN: Did we have that answered from PMH? Was that your question?

MR. LAZARUS: Yes. We can have PMH say

it, get on the record. That would be even better.

MR. REARDON: This is Tom Reardon again. Let me comment on this. Community needs assessment, I think as you phrase it, relates really to an IRS requirement for 501(c)3 corporations. In order to get tax-exempt status, you need to go through a community needs assessment, among other things, and, so, as a for-profit, it doesn't apply to us, per se.

Having said that, we've agreed to go ahead with the implementation of the community needs assessment through 2016 and to conduct another community needs assessment within the next two years.

Now, having said that, we are all about looking at the community. Everything we do is focused on looking at the community. We do that type of assessment internally constantly. We just don't necessarily use an outside consultant to help us in that regard.

I mean think about it. Many of our hospitals are safety net hospitals. We are constantly looking at the needs of the community.

One of the speakers spoke about what we're trying to do, in terms of knitting together mental health and physical health. That's a huge, huge effort.

I mean, right now, if you take care of a

person, who has a behavioral health problem and you fix their physical health problem and you discharge them and they go under a bridge and do whatever they do, they're going to be back in the hospital in 10 days or 10 weeks.

And, so, what we're trying to do is knit together the two programs, so that we have plenty of resources that actually focus on those patients if they're assigned to us as members under population management, and we also are out there trying to stitch together with our CRC model resources, whether it's mental health resources in the community or even beds in the community, as opposed to in a hospital.

So we're constantly focused on community needs. It's just I wanted to make the distinction between community needs assessment in the sense of a 501(c)3 and the community needs we all always are assessing all the time.

DR. LEW: So if I could just add on to that, it's certainly necessary, as it relates to what's required as a not-for-profit, but it's not sufficient for us and that we need to do more.

We need to look at how we're actually improving the access for the population and be able to have patients flow into our system with all the programs

that I talked about earlier.

So, yes, it's part of our overall strategy, but it's not the only thing that we would need to look at. It's part of it, but not the whole picture.

MS. MARTONE: Thank you for stating that. That's actually, as well, OHCA's mission, is to ensure that residents of the state have improved access, enhanced access to health care service, so, with that, we do ask all hospitals to report and to participate in these assessments, report their findings, report their implementation plan, provide us some times with updates periodically, and, by law, we can't ask for the data that really goes into the collection of that and having all the hospitals in the state report and have, hopefully, at one point, standardized.

We also use that in our Certificate of Need program in evaluating Certificate of Need applications, looking for unmet need, underserved areas, and making sure services are provided to the community there, so that is typically what we ask of the hospitals in this state.

MR. LAZARUS: PMH, I think it was stated in the application that it's PMH's intention to involve the local Board in the assessment process, as well as

facilitate public input, and that PMH will publicly disseminate their community needs assessment and its implementation strategy-wise website, as you mentioned.

Would you involve the local Boards for both Manchester Memorial Hospital and Rockville General Hospital?

MR. REARDON: Absolutely. Absolutely. We rely on community. Look, we desperately want to partner with ECHN. We want to be here in Connecticut, but as much as we want to be here, we'll never know the community as well as the community members, and, so, we absolutely rely on and talk to the Boards in both communities, as well as other community members.

MR. LAZARUS: All right, thank you.

MR. ZINN ROWTHORN: Is it anticipated that a community needs assessment or something in the nature of a community needs assessment will be undertaken, in order to inform the decisions about how to spend down the capital commitment?

MR. McCONVILLE: So the way we'll go about getting to the strategic capital plan is through a strategic planning process that will have several inputs.

It will have the results of the community health needs assessment, which would include both

secondary data, that data that's available through various sources, and primary data, which is often most difficult to collect, which is directly from patients, learning about their health behaviors and lifestyles.

It would also include input from an environmental assessment we would do relative to what's happening around our service area with regards to other providers in the programs that they have available to residents of our communities.

And, importantly, it will also involve input from the IPA Board. We now have this physician-led organization, physician-governed organization that will be assessing the health care that's delivered to our patients.

They will understand what the gaps in the care are, what programs are needed, what resources will need to be deployed to make sure that our continuum is complete, comprehensive, and does the best possible job of caring for the patients.

MR. ZINN ROWTHORN: Thank you.

MR. LAZARUS: Who would be on the local Boards with the qualifications to determine public health needs or disparities impacting minorities and underserved population, and how is this done in other PMH hospital

communities? I guess it's a two-part question.

MR. KARL: So speaking for ECHN going forward, the model that Prospect Medical uses throughout, as I understand, throughout the country that they will implement here, which we're very much in favor of, is the Board will be comprised of 10 members, five community members that are from the primary and secondary towns that we currently serve with diverse backgrounds, obviously to fit the current service area, and five physicians, independent practicing physicians in the surrounding areas.

Those physicians will have -- will be made up of different specialties, and they will, then, act and take the lead as the governing Board of the organization. I will also be on that Board as the leader.

MR. CROCKETT: And that setup is consistent of how we work in our other markets that we modeled ECHN to be consistent.

MR. LAZARUS: The next set of questions actually have to do with the community benefit. The application makes clear that PMH is committed to continuing to treat patients, regardless of ability to pay, and providing financial assistance to patients that qualify, based on the need, in the same manner ECHN by

adopting their charity care policy.

Is the commitment conditioned or limited in any way?

MR. SPEES: It is not. Only subject to any changes in laws or regulations that would require a change.

MR. LAZARUS: Thank you. PMH has said it's spending on community volunteer services and community benefits will be developed, based on confirmation or identification of communities' priority needs.

In the application, ECHN describes that the Maternity Care Center on the Rockville General Hospital campus that was just featured in the CHA Community Benefits Report for the hospital as providing free maternity services to uninsured and underinsured women in Vernon and surrounding towns. Is this a program that would continue?

MR. KARL: Yes. That program will continue. There's a significant community need on the Rockville side for access purposes. Those individuals are seen by rotating OBGYN physicians and Advanced Practice Nurses.

Those patients many times do not have

primary care physicians or OBGYN physicians. Once those patients are worked up, they are, then, when it's time to be delivered, they are, then, moved over to Manchester Memorial Hospital for delivery and follow-up.

MR. LAZARUS: Okay, now, some of the other programs, such as the Manchester Memorial Family Development Center programs, are funded either through the state or federal grants, and, you know, they're featured in the community benefits report.

Has ECHN explored the ability to keep these programs funded if the hospitals are converted to for-profit?

MR. KARL: Yes. We've taken a deep dive in that area, and there are -- most of them can move across, even though it is a for-profit, because these are fully grant funded.

There are some that cannot. Those grants may not be kept whole. That subsidy will be, then, covered by PMH as they come into the community.

I was just corrected, that we were now informed that all are transferrable. That wasn't the case two weeks ago.

MR. LAZARUS: How long will the process of evaluating the community benefits program will continue

to support, continue the support? What will be the finished products, I suppose? Do you want me to repeat the question?

How long will the process of evaluating the community benefits program -- I'm sorry. It's not written well here in my notes.

MR. KARL: That's okay.

MR. LAZARUS: I think I edited it too much. Will you be evaluating the community benefits program and looking at all the different programs that you're supporting within it, and, if so, what's the timeline for that to do that?

MR. KARL: Okay, so, let me answer that in a couple parts. We will be rolling out or beginning a 2016 community needs assessment.

MR. LAZARUS: When?

MR. KARL: Immediately after closing, so we're hoping this gets approved, and, again, as Mr. McConville mentioned, it's quite in depth to construct this community needs assessment.

It's not only the data that you receive, but it's actually phone calls and looking at the current disease states in the areas, what we've seen clearly.

Just for an example is the prevalence of

diabetes, vascular issues associated with that, and now, as of late, that we're all struggling with, and I'm sure that it's going to come across, is the opiate issue that we're dealing with.

We just most recently had a discussion --

MR. LAZARUS: I'm sorry, Mr. Karl. I was specifically asking about the community benefit program, not the community needs assessment.

MR. KARL: Oh, okay. Sorry.

MR. LAZARUS: I'm sorry. I didn't want to cut you off.

MR. KARL: My error. It was getting blinded in my mind, so I apologize for that. Prospect has agreed to continue our community benefit programs going forward.

MR. LAZARUS: And speaking of which, PMH has said they're projecting to an increase in the community building activities through 2019, based solely on inflation, and it assumes no change in Medicaid population served in the community, regarding the community benefit program offered at the hospitals. How do we interpret the statement?

MS. VOLPE: Do you have a bates stamp, as to where that is in the application?

MR. LAZARUS: Yes. Page 3232.

MR. KARL: Can we have a moment just to look that up?

MR. LAZARUS: Absolutely.

MR. KARL: Do you want to continue while we're doing our homework, or would you like us to take a break?

HEARING OFFICER HANSTED: Why don't you go to the next question, then we can come back?

MR. LAZARUS: Well it sort of relates to the same question, so we'll take a moment.

MR. SPEES: Sorry. Could you repeat the question?

MR. LAZARUS: Sure. Absolutely. PMH has said that it is projecting an increase in community building activities through 2019, based solely on inflation, and it assumes no change in Medicaid population served or compliment of the community benefit program offered at the hospitals, so we're trying to understand what that statement really says.

MR. SPEES: Basically, it was just a commitment, in terms of continuing to fund the community need, community benefit programs at the historical levels with an inflation rate over time.

MR. LAZARUS: And that was my next question that I was trying to get to. Thank you. The next couple of questions actually have to do with the underserved areas in primary care, so, on page 2188, ECHN describes some of the safety net services provided in the Rockville section of Vernon and the northwestern part of Mansfield as establishing a family medicine practice in Rockville and in Vernon. How large are these practices?

MR. McCONVILLE: I'm sorry. I might have to ask you to repeat the question. How large is the practice in Vernon, in the Rockville section of Vernon?

MR. LAZARUS: Yeah.

MR. McCONVILLE: Okay. I would have to provide you with the actual numbers of patients that are managed through that practice. I would have to get you that information at a later date, but it is a mature practice.

MR. LAZARUS: We're trying to get the number of physicians in the practice.

MR. McCONVILLE: Okay. There is a physician and an APRN.

MR. LAZARUS: Okay, so, a single physician and single APRN at the Vernon location?

MR. McCONVILLE: At the Rockville

location.

MR. LAZARUS: At the Rockville location.

HEARING OFFICER HANSTED: What about Vernon?

MR. LAZARUS: What about the Mansfield? Yeah, the Mansfield location.

MR. McCONVILLE: We don't have a location in Mansfield.

MR. LAZARUS: Oh.

MR. McCONVILLE: We have independent primary care physicians that practice at locations in Vernon and Tolland and Coventry, all of which draws some patients from Mansfield.

MR. LAZARUS: All right, thank you. It's also stated in the application that ECHN has imaging labs in Tolland and presently no location changes are proposed, although it is expected that ECHN ambulatory network will be expanded and services configured to promote most efficient delivery of care.

If these are professional service areas and PMH says it's going to be aggressively recruiting physicians for these areas, would there be an increase in staffing levels at these locations?

MR. McCONVILLE: That would all depend on

what the data shows. I mean, currently, we offer those services through a combination of services offered through the Tolland Imaging Center, which is a joint venture, through our laboratory services, which are affiliated, obviously, with the hospitals, and then through some independent practices, physician practices, whereas they have found more demand for their services.

We have done what we can to help them with the recruitment of additional providers. We will do a medical staffing plan. We're always looking at what the need is for physicians in service areas, and then we go about recruiting physicians to that plan.

MR. LAZARUS: Is that one of ECHN's goals, to recruit additional physicians?

MR. McCONVILLE: We would like to have as many physicians associated with our Independent Practice Association as possible to get the very best coverage and comprehensive coverage for the population served by ECHN.

That is all to the benefit of the programs that will be available for population health.

MR. LAZARUS: How successful has ECHN been in retaining residents and interns in its GME program for family medicine?

MR. McCONVILLE: So of the first

graduating class, which were four physicians, one of those physicians is a member or an employee of our Medical Foundation, and, for the current graduating class, which has six third year residents, we have recruited and signed up one of those graduates, as well, so we're in the second year of having graduated classes from the program.

MR. LAZARUS: Okay, thank you. I guess this question is more directed towards PMH. How did Rhode Island primary care network grow to 105 from 18 when the Charter hospitals were acquired by PMH in 2014?

DR. LEW: Steven, the 18 were employed physicians, and we've increased that to nearly 80 employed physicians. The over 100 that you're referring to are the primary care physicians that are part of the IPA, and the IPA is made up of and well over 300 physicians, but some of those are employed and some of those are independent, but, basically, what we started doing while we were going through the process of conversion and getting the regulatory approvals is we began to lay the ground work for our model, and what that would entail is going to the state and establishing a risk-taking entity to allow to take financial risk from a health plan, and we've already done that in Connecticut.

We also get other necessary regulatory licenses to act as third party administrators and do utilization review.

We engage the health plans, because our goal, again, is to move from a volume fee-for-service world to a value-based type of payment with the health plans.

And then the third component of building our model is to create the physician network, so we start engaging the physicians well in advance of closing on a hospital, because, you know, it really serves -- it tells the community what we're about, it starts to align the physicians with the hospital, and it gives us a head start on building the model.

And, from that, if I could just share what we've done in Rhode Island, is we took that model and infrastructure that we built and taking a value-based contract from the large payer in Rhode Island, and we went to the Governor of the state of Rhode Island, and we proposed a Medicaid pilot to deliver a coordinated care to the Medicaid population in Rhode Island at a lower cost.

Rhode Island is similar to Connecticut, in that there's a Medicaid spending problem, and our

proposal, which was approved, allowed the state or will allow the state a savings of $6 million a year, but, to do all of these things and to work with the payers and to work with the government on these types of pilots, you've got to set the groundwork, and that's identifying the needs that you've asked Dennis about in figuring out where the gaps are in care, and then for us to go out in the network and build relationships with the community clinics and the FQHCs, the Federally-Qualified Health Centers, to make sure we have a very robust network to take care of a population, if we were to embark on a Medicaid pilot.

MR. ZINN ROWTHORN: Steve, can I ask a follow-up?

MR. LAZARUS: Go ahead.

MR. ZINN ROWTHORN: Dr. Lew, how is the Rhode Island Medicaid operation structured? Is that paid, based on a risk or value model by the state, so PMH hospitals receive a certain amount of money to, at their risk, to treat a Medicaid population?

DR. LEW: We will eventually get there, yes, but we're not quite there yet.

MR. ZINN ROWTHORN: Got it. And just one other question, if I might, Steve.

MR. LAZARUS: Um-hum.

MR. ZINN ROWTHORN: My apologies. The doctors in the IPA, who are employed, and those, who are not employed by the hospitals, but participating, do they have equal access to the electronic medical record system to communicate with the electronic medical record system?

DR. LEW: Yes. If you're part of the IPA network, we interface with the physician EMR the same. Certainly, if doctors are employed and sharing an office on the same system, it makes it a lot easier, but we've figured out a way, through a lot of years of experience in interfacing with hundreds of different EMRs that are being used by physicians out there, so it really doesn't matter to us if it's independent, or employed, or EMR, differences in EMR systems. We treat them the same.

MR. ZINN ROWTHORN: Thank you.

MR. LAZARUS: Dr. Lew, did you mention that you have a risk-taking entity established in Connecticut already?

DR. LEW: Yes, we do.

MR. LAZARUS: Okay.

MR. REARDON: If I can just add to that, Mitchell? In addition to a risk-taking entity, which is a preferred provider network, we've also gotten a TPA

license and a utilization review license.

HEARING OFFICER HANSTED: What is a TPA license?

MR. REARDON: Third Party Administrator.

MR. ZINN ROWTHORN: How many lives are covered in your risk-based operation in California?

DR. LEW: Nearly 300,000.

MR. ZINN ROWTHORN: And from your experience, is there a kind of quantum of lives necessary to successfully operate a risk-based system in a particular service area?

DR. LEW: No, Perry, there’s not a magic number, but if they’re in a tightly-managed geographic area, such as a Manchester and Rockville, Vernon, that would be a lot easier.

You know, certainly would love to start off with a couple of few thousand seniors, maybe 5,000, 10,000 Medicaid recipients, and, you know, if we get 5,000, 10,000 commercial lives, that would be a great start, but we certainly could build the capacity to manage, as we do in certain pockets in Southern California, Orange County, for example, 120,000 members under management.

MR. ZINN ROWTHORN: Thank you. Thank you,

Steve.

MR. LAZARUS: So the lessons you've talked about and learned from Rhode Island, that's a model you're looking to establish in Connecticut and, specifically, at ECHN?

DR. LEW: Yes. Yes. So we would love to support the employed physician model, because, if doctors need the stability and they want to be employed, we want to be available, and let's line up those doctors now, fill the pipeline, so when the deal closes, we can bring them into the family, but, at the same time, we recognize that there are a lot of physicians that still want to remain independent, and that's fine with us, too.

So we have already worked on our contract templates for the physicians within the IPA. We've established the Physician Leadership Board already, and, as everything else we do, we will rely on the local physicians to go out and grow the network and to talk about the virtues of coordinated care.

And, as I've already stated, we've engaged the health plans, and what's really nice in the state of Connecticut is that the payers recognize this migration to value-based payments, and, so, we're getting a lot of traction there, and I think, once we get the network

established and the health plans, a couple of health plans on board and show the proof of the model here in Connecticut, would love to entertain a Medicaid pilot with the State, offer savings with better outcomes.

MR. LAZARUS: All right, thank you. The Prospect provider group, the Connecticut ECHN, LLC that you had mentioned in the application and PMH's other affiliated IPAs, are there any agreements preventing providers from directing patients to providers outside the IPA, out of the network providers?

DR. LEW: If a doctor is part of the IPA, a primary care physician is part of the IPA, and they want to refer the patient to a specialist, they would need to refer the patient to an in-network specialist. That's just part of the contractual agreement that we have, and that's what the health plan wants, also.

MR. LAZARUS: Okay.

MR. REARDON: But, of course, if I could just add to that, even though there are specialists within ECHN, there are also tertiary and quaternary services that we'll need, and we simply contract with that for the network.

MR. LAZARUS: Okay.

DR. LEW: So if there were services that

could not be provided at one of the ECHN hospitals, we would contract for those services at other facilities.

MR. LAZARUS: Thank you.

A FEMALE: VOICE: Excuse me. I'm just wondering when the community members are going to have the time to ask questions. We've all been here three and a half hours, and all I hear is discussion. I would be interested in hearing what the community had to say. Thank you.

MR. ZINN ROWTHORN: Thank you, ma'am. We are also very interested in hearing what the community members have to say, and we'll stay here as late as we need to stay here to hear whoever wants to be heard.

We appreciate your patience. We understand that this is a lot to listen to, but this is an important part of our process.

We do invite you, if you do have a time constraint this evening, to submit a comment online. Every comment that we receive will be available online, so I understand, I suppose, the frustration there, and we do appreciate your patience.

MR. LAZARUS: How successful has PMH been in securing contracts with major payers in launching the IPAs, managing at-risk contracts and complying with

national committee for quality assurance network advocacy standards when you're still growing these physician networks?

DR. LEW: So as far as securing health plan contracts? I think that was the first part of your question.

MR. LAZARUS: Yes.

DR. LEW: We have contracts with all the major payers in California. In Texas, we haven't been around as long. We have probably three contracts and working on getting additional contracts.

Certainly, our relationships and experience in California has helped us with the larger, more national payers.

In Rhode Island, we are contracted with the largest payer in the state, which has about 70 percent of the market, and we are establishing additional contracts for the Medicaid pilot or two MCOs, Managed Care Organizations, in the state. Here in Connecticut, we're currently in conversations.

And the second part of your question, Steven?

MR. LAZARUS: The IPA managing at-risk contracts and complying with the national committee for

quality assurance.

DR. LEW: Right, so, in terms of compliance, I'll refer back to one of the slides that I showed earlier. The largest Trade Association for delegated medical groups, CAPG, California Association Physician Groups, has a standard, based on a lot of NCQA requirements, and it's a very rigid scoring system, and we've reached the highest level, elite status, for four years in a row, so I think, from quality and compliance, we've done a very good job over the last several years and certainly always a focus of ours.

Excuse me. There was another part of your question? Oh, risk, managing risk.

MR. LAZARUS: Um-hum.

DR. LEW: Managing risk is always a challenge, but, again, we see the health plan and the payers migrating to putting more risk onto the providers.

We've got a lot of experience doing it, and I think we're very good at negotiating good contracts, fair contracts, but what it makes us do is assure that care is administered and delivered in the right place at the right time.

When I spoke earlier about a lot of the programs that we have for patients, taking care of them

across the continuum, what that does is it prevents readmissions and unnecessary admissions, and, so, we can reduce the cost, because we're really doing a great job of managing under financial risk.

MR. LAZARUS: All right, thank you.

HEARING OFFICER HANSTED: Before we continue with our questions, we're just going to take a 10-minute break.

(Off the record)

HEARING OFFICER HANSTED: We'll get started again. We're back on the record. Thank you, all, for coming back.

As Perry mentioned before the break, we're going to cut to the public comment portion of tonight's hearing, and then we'll go back to the questioning of the Applicants.

(Whereupon, the public spoke.)

HEARING OFFICER HANSTED: We will continue with OHCA's questioning. Mr. Lazarus?

MR. LAZARUS: Dr. Lew, you had testified that the implementation of CRC involves rewarding physicians for positive quality outcomes, not outputs, by a shared savings, pay for performance standards and benchmarks, and that these incentives would provide

effective and improving quality outcomes in PMH's other markets.

Can you describe the benchmarks and incentives you've referred to?

DR. LEW: Sure. So what are the incentives that we lay out for physicians to ensure quality? We create a report card for our physicians, and there are certain quality measures specifically on this report card, ranging from whether a patient had their screening blood test, cholesterol, hemoglobin A1c, preventive measures, mammograms, bone densitometry, proper medication, refilling their medications.

I mean there's a whole list of probably 35 different measures that we would look at, and we know and, as proven through studies, is that, if a patient has these measures done, they're probably going to have better health than those that don't have these things followed.

And, so, what we do is we incentivize the physician to perform these tests on their patients, and it's a financial incentive to make sure that they perform these measures, and we go even further. We support them.

I'll refer back to one of my slides, when I talked about our Quality Care Coordinators. We have

teams of people that will call the patients to remind them to go see their doctor, to make sure they have these preventive measures, and will coordinate the appointments with the patient and the physician offices.

If physicians' offices are inundated and they can't accommodate, we actually setup within the community what we call wellness clinics, so these are more convenient sites for patients to come to, and, if we need to, we provide transportation, and if they don't have transportation, we will go to the home. I talked about our homebound program.

So we take a lot of different steps to ensure that the patients have the proper quality measures to take care of their health, and, yes, we incentivize the physician to do it, but, a lot of times, they don't have the resources within their office to provide it, so we provide it for them, and we give the doctors the bonus anyways. It's just good relationship.

MR. LAZARUS: Thank you.

MS. CARMEN COTTO: Hi. Carmen Cotto, OHCA staff. My questions are of a financial nature, so I will probably be directing my questions to Mr. Aleman and Mr. Spees.

My first question is please discuss PMH's

future financial stability and ability to provide future financial support to the Connecticut hospitals it is acquiring as it continues to merge and acquire hospitals in other markets that are in poor financial health, such as the one most recently in New Jersey that was in bankruptcy.

MR. ALEMAN: Well let me speak, specifically, to the Connecticut transaction and the health prospect from a financial standpoint.

We had approximately a compound annual growth rate of about 25 percent year-over-year. It's been driven through organic growth in our platform facilities, as well as growth in our acquired facilities.

We work very closely with all acquisitions in the transactions, up to the point of the close of the transaction and post to ensure that the facilities are operating efficiently, are cost effective, work very closely with the teams from a program analysis and bring all of our skill sets that Von and some of the operators can speak to in great detail on how we work with the facility, so they're efficient and cost effective, and, also, in the analysis of programs that ultimately the community supports and, as Tom has stated, can grow programs once again.

So every acquisition that we're taking a look at, inclusive of the New Jersey transaction, will be making a profit from day one, earnings before profitable earnings, where, when we started working them, they were not in opposition, so we have a demonstrated track record of working with acquisitions up to the point of close to improved performance and continue that performance post.

So, to get to your question, I think I've demonstrated or discussed the historical growth of Prospect. So we've taken a look at all the acquisitions, including Connecticut. We are confident in the growth potential of these facilities, and I have the utmost confidence that every commitment that we have made to these transactions on specifically ECHN that we have the financial wherewithal to carry through on those commitments.

MS. COTTO: Thank you. When we asked the Applicants in reference to the funded sources for this proposal, you indicated that, as of September 30, 2015, PMH had in excess of $110 million in funds available, and that you also indicated that PMH generates over $7 million in free cash flow per month. Is that still the case, as of today, they $110 million funds available?

MR. ALEMAN: Yeah. Funds available on

hand currently are in excess of $65 million. By the time this transaction closes, I anticipate we will be, once again, close to the $100 million number. What has transpired during that period is the acquisition of East Orange General Hospital, which is really the differential there, and, then, from a free cash flow standpoint, we're actually in excess of $7 million, so that's what will help grow our available cash up and through the point of the close of this transaction.

MS. COTTO: Okay.

MR. ALEMAN: So no change in the cash flow.

MS. COTTO: Now you also provided the same answer for the proposal related to Waterbury, so could you elaborate how you intend to support both proposals with the same amount of funds available?

MR. ALEMAN: Same answer applies. So, once again, the growth of our capital on a month-in and month-out basis generating anywhere from about $10 to $15 million of free cash flow on a monthly basis, with our capital commitments in place, if you were to take a look at our September 2015 just purely cash generated from operations, it was in excess of $75 million.

Our capital commitments through East

Orange and the Connecticut facilities are under $40 million on an annual basis, and this is without any further growth in some of our recent acquisitions.

During this period, in the last let's call it 12 to 16 months, we've opened up a couple of closed facilities of which are now starting to generate cash into our system, as well as continued growth within our Texas and Rhode Island facilities.

MS. COTTO: And you also indicated that there was an additional $40 million available to a credit line through Morgan Stanley. What is the status of that loan right now, and how much do you have available there? Is it still $40 million?

MR. ALEMAN: It is $10 million. We took out -- we tapped the revolver to help close the East Orange transaction in New Jersey, but, once again, I anticipate, by the time that we get to the close of this transaction, there will be roughly about $30 million available in that revolver.

MS. COTTO: Okay. Do you have any other funds available exclusive of Morgan Stanley? Any other credit line that you will be able to use as a funding source for this proposal?

MR. ALEMAN: None are needed, but the

answer is yes. We're fairly, when you take a look at other for-profit systems, relatively lowly levered on an adjusted EBITDA kind of net of cash, where it's just a little over two. On an EBITDA, debt-to-EBITDA ratio, we're just a little over three.

Some of the larger systems there leverage ratios are over six. I just mention this, that you generally have a lot of capability. We're fairly conservative in the debt that we take on.

Part of that is that, for whatever reason, if we need to tap the credit markets, we can. We have very active relationships with all of the investment banks, and that's part of my role and responsibility, to maintain those relationships.

MS. COTTO: I have one more question in reference to the free cash flow. Has it in the past or will in the future PMH use this free cash flow that's available to pay any dividends?

MR. ALEMAN: No. There are none currently. We haven't paid a dividend to our private equity group since 2012. None are currently planned currently, and I do not anticipate any in the future.

MS. COTTO: I thought that it was a payment of $100 million.

MR. ALEMAN: That was in November 2012.

MS. COTTO: That was ’12?

MR. ALEMAN: Yes.

MS. COTTO: Thank you. As part of our review, we requested that you provide to us supporting documentation related to the credit ratings, and the information that you provided to us indicated that the credit agencies have given PMH an upgrade on the credit ratings, but that rating was based on all the things, on expected increases in revenue, EBITDA and cash flow as a result of soon-to-be-acquired hospitals, including those in Connecticut.

Can you please elaborate on financial gains for PMH’s -- this proposal?

MR. ALEMAN: I’m not sure if understand your question, but let me try and answer, and you can tell me if I address it or not.

MS. COTTO: Okay.

MR. ALEMAN: With the credit agencies, specifically, Moody’s and S & P, I have meetings with them on a quarterly basis.

Part of their -- two of their concerns with Prospect historically have been, A, concentration in California, so they have looked for us to develop and

expand our model outside of California, and then, with the acquisitions of Nix in San Antonio, Texas and CharterCARE in Rhode Island, how did we perform on those transactions? It's easy to go off and you can acquire and bring in the revenue to your system, but do you actually perform? Do you actually work to turn those facilities around and integrate your model into those facilities?

So, through this last credit upgrade by Moody's and S & P, what they focused on was the integration of CharterCARE and the improvement and financial performance at CharterCARE, so I think what you're referencing is, as we look to expand our model into other states, one of their areas of focus is will we continue to be successful in our integration of those facilities and the integration of our model to demonstrate the improvement in financial and operational performance, like we did in CharterCARE, at the other, you know, in other acquisitions.

That's going to be a continued focus of theirs in Connecticut, New Jersey, and Pennsylvania, as well.

MS. COTTO: Okay, thank you. My next question is also related to the credit ratings report.

They also -- the credit rating agencies also expressed some concerns on PMH's ability to achieve sustained revenue growth, due to the exposure to the California Quality Assurance program's timing, cash flow timing.

Please discuss whether the fees, reimbursement timeline will hinder PMH's ability to provide cash to ECHN to support any future cash shortfalls related to the capital community.

MR. ALEMAN: The current program in California is in place through December 2016. There is already -- the process is already in motion to extend that program through 2019.

Where their comment comes from is there are certain facilities that get very large dollars from that program, and their cash flow is solely dependent on that.

There have been delays in the program in the past when they go into place. Prospect is significantly less affected than other systems in California, due to our diverse model, and, specifically, the medical group segment, which is based in California, continues to see strong cash flow from that segment, and it's not just on the hospital side, as well as continued strong cash flow from our Texas facilities, Rhode Island

facilities, and, once again, this gets to concentration.

If you can diversify yourself from purely those hospitals and systems that depend on that cash flow, obviously, then, you're less affected by any delays in payments. We're about as diversified, I think, as any health system there is, not only since a key component of our company is the medical group side, but as well as the hospital services side.

Medical group side makes up roughly about 28 percent of our revenue and, obviously, cash flow that comes from it.

MS. COTTO: In reference to the capital projects plan, can you provide us with the timeline for that?

MR. SPEES: Well, as I mentioned earlier, so the commitment that we have within the purchase agreement is to fund or commit to fund within five years of the closing. We're obviously not going to wait until, you know, year four and a half to deploy that capital, so what we're really -- what we're doing once we close the transaction is immediately start the strategic planning and capital planning process, and, so, we'll begin to layout and identify the projects that we want to invest the capital in, and, so, that will happen relative

quickly after closing.

There will be some projects that have been noted as critical and will be invested fairly quickly after the closing, and then the remainder will be the result of this planning process.

MS. COTTO: Do you have a list of those projects that you deem critical, that you know already that are deemed critical?

MR. SPEES: We included several of the items that were at least being considered as part of the CON application.

MS. COTTO: Those are the ones that we already have. We already have those, yes.

What is the status of PMH's plans to attract a capital investment partner?

MR. ALEMAN: There is no active process currently going on right now.

MS. COTTO: Okay. I have one more question, and it's for Mr. Karl, and my question is related to the audited financial statements.

We would just like you to explain what is meant by the following statement, and I'm going to read it to you. It's note one of the audited financial statements.

It states, “As of September 30, 2015, management has not finalized the purchase agreement, and the trustees believe that the network will continue with its normal operation and as a going concern for the foreseeable future.” What did you mean with that statement?

MR. KARL: Michael Veillette will respond. He’s the Systems CEO, CFO.

MS. COTTO: Okay.

MR. MICHAEL VEILLETTE: So, Carmen, could you just do me a favor and just repeat the question? I did hear it, but I just want to --

MS. COTTO: Sure. We just want you to explain what this means, what you meant under note one in the audited financial statements. The statement reads as follows.

“As of September 30, 2015, management has not finalized a purchase agreement, and the trustees believe that the network will continue with its normal operation as a going concern.”

MR. VEILLETTE: Okay, so, we had actually the same comment in the prior year financial statements, so, in essence, from the auditor perspective, nothing has really changed, in terms of how close we are to having a

deal finalized at the time the audit was concluded.

The APA has not yet been signed, and because in just a general climate in the State of Connecticut what happened the year before, they view the condition and the circumstances as meeting the definition of a going concern.

MS. COTTO: Okay.

MR. VEILLETTE: I mean, if you look at the financial performance of ECHN over the last five years, as Mr. Karl presented earlier in the afternoon, you can see the continued deterioration of the balance sheet and the continued struggle to perform to generate a profit from operations, from core operations, so that, in essence, defines our situation as being considered a going concern.

MS. COTTO: What are you doing right now, aside from this proposal, to address this, or are you relying on this proposal?

MR. VEILLETTE: Absolutely relying on this deal to be completed. There’s no doubt about that. Are we sitting on our hands as stewards of the organization? No.

We’re working on a number of initiatives that you would expect to be going through, in terms of

just, as Mr. Karl, again, referred to earlier, productivity efficiency, looking at our labor opportunity.

We've worked very aggressively I would say in a nimble fashion since the fiscal year began, and we have been -- and we're not the only hospital in the state, but looking at what we had facing, coming into 2016, having some significant news roll out about 12 days prior to the beginning of the fiscal year with the potential recision of all supplemental payments, after we had already put our operating budget before our finance and our Board in September, we then had to go back, you know, to the drawing board, so to speak, and come up with at least one or two other budgets for 2016, with an eye on hopefully, you know, if we had to get through the year, that perhaps we could still get through the year and maybe not trip a bond covenant, okay?

But as you're probably familiar, there's been a lot of fluidity in the current year with regard to supplemental payments and whether we'd be receiving them or not, so our challenges continue to be very, very extraordinary. Nothing has really changed from that, but I assure you we're doing everything possible that we can to continue to operate, as you would expect, but the

condition is quite dire.

If you look at the last five years, our cumulative profit from operations over that five-year window is $7 million, and that is with considering some one-time items in there that I wouldn't consider part of core operations, so you look at that five-year window, and that five-year window isn't going to improve.

If anything, it's become a little bit even darker out there for us, considering the cutbacks. I understand there's been some news today of maybe partial restoration of the restorations, but that's not going to make our outcome any --

Look at our capital, what we're putting in and what we're spending on capital in these last five years. It's not enough. We're not able to -- our free cash flow is very, very meager, and we're getting to the point right now where we are concerned about actually being -- not generating free cash flow. Does that?

MS. COTTO: Yes, it does. Okay.

MS. MARTONE: I just have one question. The four individuals, who are hired and being hired basically to be the management team, in terms of quality assurance, are they available to come to any of these hearings at all, so we could kind of ask them, as a

panel, in terms of, you know, what their plans are, in terms of addressing these deficiencies or confirming that there will be no quality of care concerns at our Connecticut hospitals, maybe to share some of their experiences if they've dealt with any of these types of issues?

Obviously, you can see that our concern at OHCA, and I'll speak for OHCA, is that there are serious deficiencies, and we just want to make sure that our Connecticut hospitals maintain the high quality that they have been providing, so I'm just wondering if that's even a thought or possibility.

MR. CROCKETT: I think it may be -- obviously, I wouldn't be able to get him here for tomorrow's hearing. We could figure out what needs to be done.

MS. MARTONE: Okay. I'd appreciate if you can get back to me on that, because, you know, I think they're the ones that could answer if they truly have the capacity to be able to do this, especially when they're overseeing, what, 14 hospitals?

MR. CROCKETT: The corporate team actually will be supplemented by -- it won't be just four people. The four people that I've identified are going to have

what I consider to be leadership responsibility.

MS. MARTONE: Right.

MR. CROCKETT: There will be people, additional people within the corporate structure to assist them. I anticipate we will have a regional Director of Quality for the east coast, a regional Director for Quality on the west coast, and then support team underneath them, which will include what I call a survey readiness team for the organizations, and there will be several people on that, as well.

The four people I identified are just the four, is the leadership of the quality, not just the entire team.

MS. MARTONE: Okay. They're the ones that are accountable, though, for it? That's what we're trying to get.

MR. CROCKETT: Right.

MS. MARTONE: Is it the corporate level? Is this team? Who can provide us some assurances?

MR. CROCKETT: Well it will be the new individual, as I said, starts on Monday that will have the overall responsibility.

MS. MARTONE: Thank you.

HEARING OFFICER HANSTED: Thank you, all.

At this point, OHCA has concluded with its questions, so I'll turn it over to the Office of the Attorney General for its questions.

MR. ZINN ROWTHORN: Thank you, Kevin. We do have some questions, each of us, and OHCA's questions have been comprehensive and touched on subjects, obviously, that are of interest to us, as well, so we will attempt to be brief in our questions.

I do want to give you the opportunity, and we would be interested to hear your response to some of the public commentary we received tonight, and not to each one, but there were some common themes in those statements having to do with beyond the Advisory Board anticipated in the transaction whether and how the hospital system will continue to engage the community, the broader community or communities served, and serve and engage individual patients within the hospital.

I'd be grateful to hear any thoughts that you have on those themes that we heard. I'll take it from anyone. Mr. Karl, perhaps?

MR. KARL: Sure. So everyone's opinion is heard quite clearly. I have to always take a step back and think about the 300 corporators that we have that represent the communities that we currently serve.

The corporators elect the Board of Trustees. The corporators fill the current existing committees that are in place. The corporators, then, that are on committees then graduate to the Board of Trustees, and this is cyclical, so we're turning our Board of Trustees over on a regular basis.

Personally, I find it interesting, when community members feel as though they're not being properly heard, because the 300 corporators truly are breathing, living in this community, and, as we go forward, the mechanisms that I see that would be kept in place is a rotating group of local Board members, local community members that those five individuals that are on the Board representing the community will continue, and they will have two and three-year terms, so they will be rotating off while new members, then, rotate back on, so we will have new members coming on to the Board of Trustees.

In fact, two of the existing Board members will have two-year terms, and three of the Board members that we'd like to bring on, again, from our corporators will be brand new to the organization, so we are, at least from where I sit, I'm going to have to pass it over to the new owners, we are very open to hearing other

options that may be out there.

I did hear some concerns. We're very open to having other people that are interested in participating on the local Board of Trustees to come in and meet with the current Board, meet with corporators, meet with myself, and bring that forward.

That's what we do as a community organization.

DR. LEW: Perry, I would just add that, you know, with our model, because there are so many touches that we make to patients, I talked about the homebound program and our Quality Care Coordinators that reach out and they call patients, there's plenty of opportunity for the community and patients to give feedback as they're receiving care, and we take those very seriously, because patient satisfaction is the reason why we're able to grow, because patients tell their friends to sign up with this network, because you're going to get great care.

So while we don't have a formal committee, if you will, that patients serve on, or members of the community serve on, because of the multiple touches within our model that patients receive, there's plenty of opportunity for feedback.

MR. ZINN ROWTHORN: Great. Well I appreciate that. I think one of the blessings of running community hospitals for as long as you have is that there is a sense of engagement and expectation of engagement that arises over time, a proprietary sense, in effect, over the direction of the hospitals and the communities.

I'm glad to hear that that's been recognized as an important value to recognize going forward. I'd encourage you to think about that as you go forward with this transaction and share with us as we go any thoughts you have about what's worked to this point and how to preserve that, what's worked in your experiences in your other hospitals, as far as engaging the communities that they serve and the direction of the hospital as you go forward, so I appreciate that, those answers, and I'll turn it over to Henry.

MR. SALTON: Again, as Perry noted, I think a number of the things that we were thinking about asking have been covered by some of the questions in OHCA and some of the answers we've gotten so far.

One area I wanted to explore a little bit more is the capital commitment issues. So the hospitals indicated that one of the reasons why they pursued a sale was because their view was that their capital improvement

needs that could not be met needed to be addressed, and I'm wondering if, again, not asking for accounting level of guarantee, but what would you quantify those kind of capital improvement needs that need to be addressed on the two campuses in the next five years?

MR. KARL: Okay, so, our physical plant internally -- well, you have to look at it a few different ways, so please bear with me as I go through this.

Our physical plant internally aesthetically is ugly. The wallpaper is ripped. There's scratches on the walls in the patient rooms. The beds the patients are in I replaced them when I first started 12 years ago. The floors are worn. Aesthetically, the organization looks as though that it has not been maintained.

I can tell you that, over the past five years, the capital that we have expended has gone into backup generators, boilers, elevators, those behind the scenes costs that keep the organization functioning.

What we need to do now is actually prepare the organization for the future. There's a lot of hospital-acquired conditions. It's something that we live with all the time that scares the bejesus out of all

of us.

The last thing you want to do is get a patient come into the organization with an issue and end up with a hospital acquired issue. What we'd like to be able to do is get our organization into single occupancy beds. We'd like to upgrade our ORs. They are way undersized. They're only 45 years old.

We currently have, you know, as others, as Dr. Karl had mentioned, we've invested in some pieces of equipment that we found were extremely necessary; robots.

We need to upgrade those robots. We need to replace our CAT scanners. We need to replace our MRIs. We need to replace some of the basic necessities to take care of patients.

We have several different patient monitoring systems that we've pieced together over the years. They work extremely well. They need to be replaced.

We need to invest in some subspecialists, whether they're hand surgeons, whether they're neurologists, whether they're bariatric surgeons. There's obviously a significant obesity epidemic and so on and so forth.

We currently have these plans on the

docket. We've had these plans for quite some time. We have a 20-year-old EMR. They used to call them HIS, Hospital Information System. We have an HIS that needs to be upgraded. That's about $25 million.

There aren't returns on investments for a lot of these things, but these are the things that we're going to need to put in place in the future, so we can appropriately and properly care for the patients that we currently care for. That's just off the top of my head.

MR. SALTON: So would you kind of ballpark what you think those needs would require for capital investments?

MR. KARL: What I just threw at you right now?

MR. SALTON: Yeah.

MR. KARL: About 40 million.

MR. SALTON: Okay and I understand that Prospect's commitment of 75 million is to provide improvement, capital improvements to the benefit of the hospital business and for the benefit of the service areas of the two hospitals, and I understand you don't have specifics, as far as allocation, like do we want to put so much in MRI, do we want to put so much in building a new doctor's office building, or a parking garage for

our patients, but is there a sense of commitment that this $40 million out of the 75 million will be going to the campus or somewhere in that, some relative proportion that's close to that?

MR. KARL: Yes.

MR. SALTON: Now I want to make sure your partners agree.

MR. KARL: Okay.

MR. SALTON: Because I see a little glint in the eye.

MR. SPEES: Well my only hesitation is that we haven't reviewed all of those capital plans with the local leadership and the local Board and the management. It certainly sounds like the kinds of things that you would expect to find in circumstances like this, and it all sounds like the kinds of capital investment that we would want to make to actually build on the very significant initial capital investment that we're going to make, so I can't make an unequivocal commitment like that, without having had the opportunity to review the detailed disciplined approach to capital that we'll use.

MR. SALTON: So in doing your due diligence on the acquisition of these hospitals, you guys didn't look at the capital improvement demands that the

hospitals have before signing to acquire them?

MR. SPEES: Well we looked at, generally, the physical condition and the assets, but we haven't prepared a detailed capital expenditure plan. We certainly reviewed the capital needs list and deferred maintenance list, which Peter has described, but have not made a formal commitment, yes, we're going to do that, we're going to do that, we're going to do that.

In fact, we wouldn't. That's really part of our model here, is we work with local management and local leadership to identify those projects, so we would definitely give a lot of credence and weight to Peter's view of and local management's view of what the capital needs are and where they're best allocated.

MR. SALTON: You've made a three-year commitment to keep operating both facilities as acute care hospitals. Why only a three-year commitment?

MR. KARL: That's all we asked for, quite honestly.

MR. SPEES: We stepped into the prior transaction, and that was one of the terms in the prior transaction.

MR. SALTON: Would you be open to a longer commitment?

MS. VOLPE: No. It's not negotiated in a vacuum. You know that, Henry. I mean there's so many provisions in the asset purchase agreement that went into this. I mean, really, when you talked about have they looked at the capital needs, they spent a lot of time figuring out how much it was going to cost to pay all the pension liabilities.

I mean there was a lot of due diligence in recognizing how much money really needed to be spent here to preserve and maintain these hospitals.

MR. ZINN ROWTHORN: I'll ask a different question. Do you foresee circumstances three years out under which Prospect might make a determination that it no longer wishes to run an acute care hospital?

DR. LEW: As you sit here today, the answer is obviously no. The problem that we always run into is you never know what happens from a federal government regulation perspective or even from a state regulation perspective, in terms of how health care is provided.

So, in a vacuum, if all regulations were to stay the same and there were no substantial changes, then I think the answer is I don't see that, but the reality of the situation is that we don't control the

federal or the state regulations.

As a responsible business health care provider, we have to be able to be adaptive to both of those changes, so your point is that, usually, you don't see changes occurring in a short time, but five years down years the road, six years, seven years down the road, I don't know if anybody could sit in our seat and say that there are no changes that would have an impact.

MR. SALTON: So, at this point, you haven't done any assessment or evaluation of a consolidation of services between the two hospitals to try to locate one or close one?

I mean some people weren't around, but we used to have a hospital in the north end of Hartford that was acquired by another hospital, and it got scaled down and then disappeared, so that's one of the concerns I'm trying to anticipate.

MR. CROCKETT: Our commitment is to maintain the services for the three-year period. Getting back to our original sort of our presentation, as we look to go into value-based health care providing, we actually look to expand the service we're providing underneath the management of the population, and, so, is there services that are needed that are currently being provided outside

of the community?

Our goal would be to actually bring those services into the community at both of the facilities and I guess underneath the auspice of being the provider underneath health population management, so, actually, for the next few years, that's actually what our objective is.

MR. ZINN ROWTHORN: So the testimony, if I could summarize it, is that, absent substantial regulatory at the federal and/or state level, you would not anticipate ceasing to operate in these communities these two acute care hospitals?

MR. CROCKETT: I don't see -- I don't think there's anything that we see on the horizon that would change that, so that's accurate.

MR. REARDON: And take a look at our track record. We've never closed a hospital. We are a growth company, not a contraction company, but we can't predict five, 10 years down the line.

MR. SALTON: Okay. One of the conditions to the capital commitment I understand is that PMH is reserving the right to defer the commitment beyond the five-year period of the state or federal authorities, enact requirements after closing that discriminate

against for-profit hospitals and cause the hospital businesses to suffer a decline of EBITDA more than 10 percent in a year.

I just want to clarify. It's both those conditions. It's not one or the other, so the fact that the federal government passes something that seems to be, I don't know how we determine that, discriminates against the for-profit hospital, but doesn't actually impact to the extent indicated your -- hit the 10 percent number, that's not -- that would not, then, be a basis for deferral?

MR. SPEES: That's correct.

MR. SALTON: Okay.

MR. ZINN ROWTHORN: Let me take the opportunity to editorialize a little bit about that condition to the capital commitment.

On this side of the table at least, our function is to evaluate the fairness of the transaction, and that evaluation includes that $75 million commitment.

It doesn't include a $75 million commitment that may evaporate, depending on the regulatory atmosphere and how that changes federally or on a state level.

And, so, this is an issue that we've

confronted in past proposed transactions, and it's one that kind of regulatory legislative change carve out to a commitment that forms a substantial part of the value of the transaction is one that we've had a dim view of, so I'll say that comment for your benefit and give you the opportunity to respond to it.

MR. SPEES: I wish I had the language in front of me, but I'll speak from memory. So it's actually a very, very narrow commitment that is intended if there's some adverse regulatory development that is specific to for-profit hospitals only, so it's really meant to be something very narrow and extremely unlikely.

MR. ZINN ROWTHORN: Okay. One should not be surprised to see a condition that relates to that purported carve out if this transaction were to be approved.

MR. SALTON: Okay. I'm leaving capital commitment, and I only have one other question, which is, if you're a local physician, primary care physician or otherwise, they're participating the CRC and they're saying, okay, what are the obligations or requirements for this local physician to participate in the CRC?

Do they have to be a member of the IPA? Do they have to be employed by the Medical -- part of the

Medical Foundation?

DR. LEW: They can be employed or they can remain independent. That's one of the values of the model, is it can engage physicians, depending on where they are in their career and what their desires are for employment or not.

Contractually, they need to be part of the network and referred to physicians within the network. We're going to hold them to quality standards that are written out in the contract and tell them what quality metrics they're going to get bonused on and what's going to be asked of them, and there are a lot of other requirements related to submission of encounter data or usage of EMR and using best practices, as it relates to taking actually management of a patient.

So, you know, basically, they've got to stay within the network, refer patients that are part of our network, keep them in the network, and we hold them to the quality standards, but they don't have to be employed.

So you could have a doctor, who is part of the IPA, that might go to another hospital. They may actually be employed by someone, a system down the street. That's what's nice about our model and our

system. It's open, and, so, we are not a closed system in all of our markets. We have relationships with our competitors, okay?

We can use our model as a way to reach out and really start to manage population together.

MR. SALTON: Okay, so, just, again, from a layperson's perspective, so someone brings their spouse to the emergency room one day at Manchester Memorial Hospital, their family physician is an old-timer, who is not participating in the IPA, and they're admitted, because they have a condition, which requires some long-term chronic maybe follow-up, that the CRC would be a perfect kind of thing for population management, so if this patient wants or the hospital says we want you to participate in this population management process we have, do they have to then leave their physician?

Do they have to get their physician to sign up, or do they have to go to someone else? When you talk about managing a population, where you have some providers in the community, who may or may not be in your IPA, I'm wondering how that works.

DR. LEW: Yeah, so, Henry, what we would do is offer to have that patient brought into our programs and to be part of the care management program.

We call it Care Plus, and, so, even though they're not part of the IPA, they can still access the services, because it's better for the patient, and you don't want that patient to have to be readmitted.

What happens, so, we're doing this in other markets through an ACO and feeding patients into our model, is they like it, and they want access and to be part of a program, and, so, when it comes time to open enrollment to convert and be part of the network by signing up for a plan, that's what ends up happening.

So, to answer your question, no, they don't have to be part of a network to access the services, because, again, we still need to take good care of the patient and make sure they don't get readmitted.

MR. SALTON: Okay. Gary, do you want to ask some questions?

MR. GARY HAWES: Good evening. My name is Gary Hawes. I work at the Attorney General's Office, and, as noted at the beginning of this hearing, one of our primary responsibilities is the protection of the charitable funds, as those are seen the hospital, itself, being a charitable organization, the investment that the community has in the hospital, and, specifically, the actual charitable funds that the hospitals hold. Lots of

people give funds to the hospitals.

I really only have one question and a couple of requests for some late-filed exhibits, but, before I get there, I want to point out that the reason that I have so little is because the production that I got was wonderful.

I have found ECHN, and I haven't had to ask much at PMH, because I'm more with the ECHN charitable assets, but it's been a great production, so thank you very much.

And there was actually a production yesterday morning, and that's where some of my requests and questions come from, and these relate to the funds. There are about I'd say approximately about 100 funds that ECHN holds, either Manchester, Rockville, or the foundation, itself.

One question I have concerns the fund. My understanding is it's still in the midst of probate, and some distributions have been made. This is the Raymond F. Damato Fund or Estate, excuse me, and the fund number is, as it was submitted in Certificate of Need Application, 11.1-30, and the recently submitted filing talks about the ideas and the plan that ECHN has for the distributions that may come. Although the interest is

vested and some of the distributions have been made, not all of them have been made, and, so, the ECHN has a plan and has discussed with the executor what might happen with that.

My question is to what extent has ECHN committed to this proposal? In discussion at Board meetings, has there been a Board vote about what ECHN would like to happen with the Damato distributions?

DR. O'NEILL: We're going to ask our legal counsel to answer that, and then I'll give you a little side comment.

MR. HAWES: Thank you.

MS. JOYCE TICHY: So far -- can you hear me? My name is Joyce Tichy. So, so far, what we have done with our Board is that we -- the Board has been very interested in and hopeful to ensure that the funds made available through this request fully honor the memory of Mr. Damato.

He was a very well-known, deeply-loved person in the community, and just to give a little bit of background, he owned a number of properties in the Manchester area.

If you drive around Manchester and you happen to see apartment buildings with a covered wagon in

front of them, that was his signature. They are really all over, and, when you drive by, you know that that was his trademark.

He was not only a good and very loyal person in the community. He was also a very successful businessman, and, so, when he left funds to ECHN and others, he really just spread the benefit of all he had done throughout his life.

So, in that regard, knowing the history of Mr. Damato, the interest of the Board was to make sure that the intentions that he expressed through this bequest were honored, and we understood that his primary interest was not only to enhance the health of the community, but, through his other bequests, we knew he was very interested in education.

Actually, another part of his bequest went to Manchester Community College. Another went to another institution, not-for-profit institution of education in Connecticut, I mean in Manchester, East Catholic High School.

So, in thinking about this and knowing, as the Board does, some of the things that were expressed to you earlier, that it’s very important to maintain physicians in the community, to enhance our GME program,

so that physicians want to stay in Manchester and serve Manchester, the thought of the Board was to arrange for the transfer of the funds to the entity, the University of New England College of Medicine, that currently managers are graduate medical education program, with the restriction that the monies generated would and could only be spent in Manchester to further graduate medical education, with the further condition that, insofar as the monies would be needed to pay off ECHN's debts as part of the transaction, which, of course, is foremost for us, it would first be used toward that purpose.

So our Board is very interested in this concept. It meets a lot of where we think it's best for the money to go, and it also is, by its nature, it would be significant enough to matter to show that there was importance to the grant that he gave.

One of the options would be actually to finance a portion of the building where graduate medical education could be done and, insofar as possible, provide a naming opportunity to the building, so that his name would remain there for everyone to see.

So that's where it is. Where our Board has gone at this point is we have -- they have authorized us to pursue this with Unicom, and we have followed that

instruction by continuing conversations with Unicom.

We also, because we know that matters of this nature are of interest to the community and that the function of you all is to ensure that those interests are honored, we are actually waiting to see if you have any comment on it.

Were you to be agreeable to that, and I know that Mr. Hawes may have some thoughts about the structuring of it, we, then, would proceed with this process and continue to converse with Unicom and put together a resolution to the effect that we have described, but, at this point, there is no final Board resolution that sends the money over.

Another thing, just to add to this, is the executor of the estate we've met with him a couple of times, and he is very interested, also, in making sure that this money is used in the way that would be appropriate to Mr. Damato's money, and he has expressed a strong positive view toward this for all the reasons that I've just described.

So that's where we're at, and, certainly, if we could, if you have any thoughts about how to construct this appropriately, we are happy to hear those. We just want to do this right.

DR. O'NEILL: So just to add one more thought, what the Board did was we passed a resolution to pursue this idea with the executor and with the Attorney General. We didn't commit to any program.

MS. TICHY: We actually are hopeful that we could meet with one or more members of your office to describe the various kinds of facilities or possibilities that this money could be used for, one of which could be part of the building.

Another would be possibly this would be second, sort of have a list of things, but sort of lower on the list, but possibly appropriate, as well, would be to finance the actual medical education of the students that come through Manchester.

Getting a medical education is phenomenally expensive. It's an extreme weight on the shoulders of physicians, who then basically spend the first portion of their career just paying back the money, so if we could finance education in that way, with a hope that the person receiving the money would stay in Manchester, that is also a possibility.

Ultimately, the goal would be to make sure that the restriction is for medical education and in a health-related capacity, because that's what clearly his

bequest was intending. Did I forget anything?

MR. HAWES: Thank you. In yesterday's production, too, there were two outstanding issues with respect to funds, and, so, my request is going to be just for I guess a late-filed exhibit that addresses these two issues, and, if there's a problem with that, also, I would like to hear about that.

The E. Stevens Henry fund, it's Fund 11.1-55, this is one that my understanding is there's some difficulty trying to understand exactly how it should be classified, so for those of you, who are wondering about the classification systems we have, some are restricted funds, as to spending and to use, and we try to understand exactly how all that plays out, and then how those funds are going to ultimately be transferred to the new foundation, which is part of, also, of our jurisdiction.

So this one is, I guess, a difficult, well, I know it's a difficult nut to crack, so it indicated that the hospital was currently evaluating this, and, so, a resolution of that, should you be able to get there, would be great as a late-filed exhibit, so I think that would be --

HEARING OFFICER HANSTED: That would be

Late File No. 7.

MR. HAWES: Late File 7. And I think we can just do it in the same exhibit, if that exhibit can be a submission to our office.

You had indicated here that you're updating the values of the funds. I'm trying to remember what they were current as of. It was September 30, 2015, so I don't know the date that you could do that, if it can be March 31, 2016. I'm not sure if you can get us numbers for that, but that would be our most current fund valuation that we would definitely like to use.

As I indicated, too, one of the other areas that we have jurisdiction over and our job starts kind of after the transaction and creating a new foundation, and ECHN has presented to us a good draft Certificate of Incorporation and Bylaws for this new foundation, but one of the things, in addition to all these specific funds that will most likely be transferred there, is whatever charitable assets the fair market value that's remaining the assets of ECHN that's transferred over.

My review shows that the most recent analysis of that is a little outdated, so I just want to ask for an update on this. It's a table, actually. It's

a simple table, something that I can actually follow, and it was submitted to us in the response to the first and second letters of deficiency that were sent out by our offices. It was Table No. 8, and it was on page 2210, and it's the Net Proceeds Analysis.

My understanding is we don't need to go to the $115 million option, that we can just go with the $105 million option, but if that can be updated to, you know, whatever current numbers that exist and be filed, again, it can be filed along with the same document, just to provide us the most current information on that, that would be great, and I understand it's as current as you can be, with lots of things shifting.

That's all I have. Thank you.

MR. ZINN ROWTHORN: So I think that wraps up our collective questions. We took public comment out of order from our agenda, so, at this point, we'll ask if there's anyone, who has come in since the public comment section, or was here, but thought of something they'd like to say, and open that up to the floor. Anybody?

MS. VOLPE: If at all possible, we'd like an opportunity to make sure we address your concerns thoroughly on the capital commitment.

We understand that's an issue and a

concern, and, you know, we've had an opportunity to look at the provision. Again, this is a leftover provision from another transaction, and, you know, we made commitments and to step into it, but if you could indulge us just for a few minutes to talk among ourselves and get back to you?

MR. ZINN ROWTHORN: We'd be happy to do that. We're going to be together again tomorrow, so we could push that over until tomorrow.

MS. VOLPE: Sure.

MR. ZINN ROWTHORN: But I appreciate that, Michele. On behalf of the Attorney General's Office and the Attorney General, I want to thank all of you for your input.

This has been a long, but I think very productive, from our perspective, helpful and informative afternoon. We appreciate your patience with our process.

To the members of the public, who are still here or who were here, we thank you for your input. We were very happy to see such a big crowd, so thank you, all.

For those, who have an appetite for it, we're going to do it again tomorrow in Vernon. All are welcome. Some are required. (Laughter) But thank you,

and have a good evening.

HEARING OFFICER HANSTED: Just one point of housekeeping before we leave. The late files, those will be due April 8th. Does that give enough time for everything?

MS. VOLPE: What is the plan, in terms of keeping this open? I mean do you plan on keeping this open beyond April 8th?

MR. ZINN ROWTHORN: Well I can tell you, with respect to at least the issue of the immediate jeopardies, we would like to keep that open up through our decision date to receive documents that go back and forth between the parties and CMS, so, at least to that respect, I think we'd like to be as up-to-date as possible, and then I don't know if others have thoughts about keeping the record open.

HEARING OFFICER HANSTED: I'm not opposed to it. I just want to set a finite date.

MS. VOLPE: Sure. Could we, depending on what late files we hear for tomorrow, could we agree on a date tomorrow?

HEARING OFFICER HANSTED: That's fine.

MS. VOLPE: So we know the totality of what we're producing, and we'll be in a better position?

HEARING OFFICER HANSTED: Yes. Yes. So we'll set a date at tomorrow's hearing.

MS. VOLPE: Thank you.

HEARING OFFICER HANSTED: Okay, thank you, everyone.

(Whereupon, the hearing adjourned at 7:38 p.m.)

## PURCHASE ECHN ASSETS BY PMH

DOCKET NO. 15-32016-486 AND 15-486-01

MARCH 30, 2016

2:00 P.M.

ELKS LODGE
9 N. PARK STREET
VERNON, CONNECTICUT

POST REPORTING SERVICE
HAMDEN, CT (800) 262-4102

. . .Verbatim proceedings of a hearing before the State of Connecticut, Department of Public Health, Office of Health Care Access, in the matter of Eastern Connecticut Health Network, Inc. (ECHN) and Prospect Medical Holdings, Inc. (PMH), Purchase ECHN Assets by PMH, held at the Elks Lodge, 9 N. Park Street, Vernon, Connecticut, on March 30, 2016 at 2:00 p.m. . . .

HEARING OFFICER KEVIN HANSTED: Good afternoon, everyone. This public hearing before the Office of the Attorney General and Office of Health Care Access, identified by Docket Nos. 15-32016-486 and 15-486-01-CON, is being held on March 30, 2016 to consider Eastern Connecticut Health Network and Prospect Medical Holdings application for the purchase of the assets of Eastern Connecticut Health Network by Prospect Medical Holdings.

This hearing is part of the procedure under what is commonly referred to as the Conversion Statute, which requires the Commissioner of the Department of Public Health and the Attorney General to evaluate any proposal, which would convert a non-profit

Connecticut hospital to a for-profit entity.

For OHCA's purposes, this public hearing is being held pursuant to Connecticut General Statutes, Section 19a-639a and 19a-486e, and will be conducted as a contested case, in accordance with the provisions of Chapter 54 of the Connecticut General Statutes.

My name is Kevin Hansted, and I have been designated as the Hearing Officer on behalf of the Office of Health Care Access for this hearing.

The staff members assigned to assist me in this case are Kimberly Martone, Steven Lazarus and Carmen Cotto. The hearing is being recorded by Post Reporting Services.

OHCA will make its determination on this application pursuant to Sections 19a-486d and 19a-639 of the Connecticut General Statutes.

Eastern Connecticut Health Network and Prospect Medical Holdings have been designated as parties in this proceeding.

At this time, I'll turn it over to the Office of the Attorney General for a few opening remarks.

MR. PERRY ZINN ROWTHORN: Thank you, Kevin.

HEARING OFFICER HANSTED: You're welcome.

MR. ZINN ROWTHORN: Good afternoon, everybody. My name is Perry Zinn Rowthorn. I'm the Deputy Attorney General. I've been designated by Attorney General George Jepsen as the Hearing Officer in this matter for the Office of the Attorney General.

I want to thank the Applicants for being here today, the witnesses, and public officials that we will hear from, and a special thank you to the members of the public, who are here.

We recognize that this transaction is important to your community, to all the communities that ECHN serves. That's why we're here. We're happy to see so many of you here.

We recognize that we have some tight quarters, but we are happy to have you with us today.

We're conducting this hearing jointly with OHCA, but the Attorney General's criteria in evaluating this transaction and his focus are slightly different. I'll say a few words about that.

The Attorney General's role is defined and limited by statute, the Conversion Act that Attorney Hansted referred to, Section 19a-486 of the Connecticut General Statutes.

That Act reflects the Attorney General's

traditional role in protecting the public interest and charitable assets and insuring that monies and properties committed to a charitable purpose are safeguarded and used appropriately.

Non-profit hospitals and hospital systems, like ECHN, hold their assets for essentially a charitable purpose, providing health care, not for generating profits for shareholders or owners, and, in that way, they are different from for-profit hospitals.

The administrators of a non-profit hospital are the stewards of its charitable assets with a responsibility to take good care of those assets.

The law does not prohibit non-profit hospitals from converting to for-profit status. When one seeks to do so, as here, the Attorney General's job is to ensure that the non-profit hospital is meeting its obligations of good care for charitable assets.

We make sure three things, that the process leading to the sale was responsible. Were the hospital administrators careful in deciding to sell and choosing a buyer and negotiating a transaction?

Second, that the terms of the sale are fair. Will the hospital get fair market value for its assets? And, third, that the proceeds of the transaction

will continue to be used for charitable health-related purposes, those proceeds remain charitable assets after the transaction, and we need to ensure that the assets of the sale are protected from being used for the for-profit purposes of the new hospital system.

Because the Attorney General must remain focused throughout on the charitable assets, his review and our decision for the most part does not focus on the running of the for-profit hospital after the transaction.

Issues relating to the operation of the new hospital entity, as it relates to access to health care services, are within OHCA's purview.

Today's hearing is a very important part, but just one part of a review that has been ongoing for months. We'll take testimony and evidence, and we'll hear public input. We'll ask some questions.

Don't assume, if we don't ask a question on a topic, that the topic is unimportant to us. Before today, we have received and reviewed thousands of pages of documents, we've asked questions and follow-up questions, and all of the materials that have been generated as part of our review are available on the Attorney General's website. That is www.ct.gov/ag.

Your input is particularly important to

our review. All the information we receive today and in the hearing that we held yesterday in Manchester will become part of the official record of our review.

We'll also take comments in writing, and those comments, if we receive any, will be included in the official record.

We have sheets available at the door, I believe, that discuss the process to sign up to speak, as well as the process for submitting written comments. Please take copies of those sheets for yourself or for anyone you know, who might be interested in submitting a written comment.

We are on track to complete our review under the current schedule as early as June 10th of this year. A word about what our decision might entail.

Under our statute, the Attorney General must approve the transaction as is, deny it, or approve it with conditions that relate to the purposes of the Conversion Act. For the Attorney General, that means conditions that relate to the Attorney General's focus on charitable assets and their future protection.

This is a joint hearing. Kevin and I are going to work together to move this along to cover as much business as we can. You can assume that if either

of us makes a ruling on an objection or a point of evidence, that that ruling applies to both of our offices, unless we otherwise state it, and, if we ask a question, that that question and its answer are part of each of our office's review.

The agenda for today is going to be slightly different than it was yesterday. We received some feedback from the public, that they wanted to be heard earlier in our proceeding, so we'll proceed as follows.

We'll take opening statements from the Applicants. After that, we'll have an opportunity for public comment. It's traditional to hear from public officials first, then we will have questions from OHCA, and, if the Attorney General's Office has questions after OHCA finishes its questions, we'll ask questions, and then we will reopen it for public comment after that.

I'm going to turn it back over to Kevin for some additional important business notes. Before I do that, I want to recognize and thank the staff from the Attorney General's Office, who is here with me today.

To my immediate left is Assistant Attorney General Henry Salton, who is providing legal advice to the Attorney General and to OHCA in this proceeding, and

to his left is Assistant Attorney General Gary Hawes, who is coordinating this review for the Attorney General's Office, and with us somewhere here is paralegal specialist Cheryl Turner. Thank you for your attention.

HEARING OFFICER HANSTED: Thank you, Perry. At this time, I will ask staff to read into the record those documents already appearing in the Table of the Record in this matter. All documents have been identified in the Table of the Record for reference purposes. Mr. Lazarus?

MR. STEVEN LAZARUS: Good afternoon. Steven Lazarus. As of yesterday, we had entered into the record Exhibits A through BB. We also had some additional exhibits added since yesterday, so the Table of Record has been extended to include Exhibit GG.

There were some notes, edits that were brought up by Attorney Matthews. Those are not being included at this point, however, they will be done prior to the close of the hearing, and we will provide you with an updated, revised Table of Record prior to the closing.

MS. REBECCA MATTHEWS: Thank you. This is Rebecca Matthews, counsel for ECHN.

We also made one request about the administrative notice taken regarding the Greater

Waterbury Health Network application. I know that's already on the record. I just wanted to note it again, if that's okay. Thank you.

MR. ZINN ROWTHORN: Can speakers be careful to speak into their microphones and make sure that our audience, which extends into the second room, can hear us? Thank you.

HEARING OFFICER HANSTED: Thank you. Any objections to the exhibits, Attorney Matthews?

MS. MATTHEWS: No.

HEARING OFFICER HANSTED: No? Okay.

MS. MATTHEWS: No objection.

HEARING OFFICER HANSTED: Thank you. And now I'd like all those individuals, who are going to testify here today, to please stand, raise your right hand, and be sworn in by the court reporter. You have to turn around, folks. She's behind you.

(Whereupon, the parties were duly sworn in.)

HEARING OFFICER HANSTED: Okay, thank you, everyone, for doing that. Now, as we did last night, would you just please each identify yourselves for the record, whoever wants to start?

MS. MATTHEWS: Rebecca Matthews, counsel

for ECHN.

MR. PETER KARL: Peter Karl, CEO of ECHN.

DR. DENNIS O'NEILL: Dennis O'Neill, Chair of ECHN.

MS. JOY DORIN: Joy Dorin, Board of Trustees, ECHN.

DR. MITCHELL LEW: Mitchell Lew, President, Prospect Medical Holdings.

MR. VON CROCKETT: Von Crockett, Senior Vice President for Prospect Medical Holdings.

MR. JONATHAN SPEES: Jonathan Spees, Senior Vice President for Prospect Medical Holdings.

MR. STEVEN ALEMAN: Steve Aleman, Chief Financial Officer, Prospect Medical Holdings.

MR. TOM REARDON: Tom Reardon, President of Prospect East.

MS. MICHELE VOLPE: Michele Volpe, Legal Counsel for Prospect Medical Holdings.

HEARING OFFICER HANSTED: And we had a couple of folks in the audience, who were sworn in. Would you just please identify yourselves for the record? I believe the public comment microphone is on behind you.

MR. DENNIS McCONVILLE: Dennis McConville, Senior Vice President for ECHN.

MS. LINDA QUIRICI: Linda Quirici, Vice President for Patient Safety and Quality.

MS. NINA KRUSE: Nina Kruse, Vice President of Communications.

MR. MICHAEL VEILLETTE: Michael Veillette, Chief Financial Officer of ECHN.

MS. JOYCE TICHY: Joyce Tichy, General Counsel, ECHN.

HEARING OFFICER HANSTED: Thank you, everyone. Attorney Matthews, you may proceed with your opening.

MS. MATTHEWS: Thank you. I'm going to actually just turn it over directly to Dr. Dennis O'Neill.

DR. O'NEILL: Thank you, Rebecca. Good afternoon, Mr. Hansted, Mr. Zinn Rowthorn, members of the Office of the Attorney General and members of the Office of Health Care Access.

My name is Dennis G. O'Neill. I'm the Chair of the Board of Trustees of Eastern Connecticut Health Network.

I'm also a physician in private practice working in the Manchester and Vernon communities for the past 33 years.

Thank you for providing us with the opportunity to submit testimony in support of ECHN's proposal to transfer its assets to Prospect Medical Holdings.

First, I would like to adopt my pre-filed testimony, then I'd like to explain that, after my introductory comments, Peter J. Karl, ECHN's President and CEO, is going to make a brief presentation on our financial situation.

Joy Dorin to my left, one of our Trustees and Chair of the Board's Transaction Committee, will then present information on the transaction, itself, and ECHN's quality program, after which representatives of Prospect Medical Holdings will offer information on their organization.

Manchester Memorial Hospital and Rockville General Hospital, the flagship hospitals of ECHN, were built about 95 years ago by members of their respective communities in response to the influenza pandemic of 1918 and, also, as memorials to those community members, who died in World War I.

For many decades, these hospitals functioned as separate community hospitals, and then, about 20 years ago, they joined together to form ECHN.

They were both in good financial shape at the time, but pursued a merger, in order to provide more efficient and better integrated hospital care for their citizens.

Over the last two decades, ECHN has grown, as the communities have grown, beyond the two hospitals into a health care network with 13 wholly-owned subsidiaries, 12 joint venture companies, and dozens of facilities serving the needs of our communities.

ECHN now employs 3,000 people in eastern Connecticut, and the hospitals in Manchester and Vernon are the largest employers in their communities.

In just this last year, 2015, approximately 115,000 people were treated in our hospitals, 61,000 were examined in our emergency departments, 5,000 folks were cared for by our visiting nurses, and we delivered about 1,400 babies.

Needless to say, the citizens of eastern Connecticut need and use our facilities, but the American people, in general, and the members of our communities, more specifically, have told us that they want and need care that is even more integrated than the care they receive today, care that is higher in quality and lower in cost.

In an attempt to respond to these needs and in anticipation of worsening financial conditions, the trustees of ECHN formed, about four and a half years ago, a work group to evaluate whether or not ECHN should pursue a partnership with another organization.

At that time, we thought we had about five years before our circumstances became dire, due to changes in the health care landscape that we thought were going to have a negative effect on our organization.

The first year was spent deciding that we should partner, as opposed to going it alone. In the second year, we selected as our best option an asset purchase agreement offered by Vanguard Health System and Yale-New Haven Health System.

In the middle of that second year, Vanguard was acquired by Tenet, and we spent the remainder of the year getting to know them.

During year number three, we negotiated a deal with Tenet that would have preserved our hospitals, the jobs of our employees, and the pensions of our retirees, and provided capital for future growth, but, at the end of 2014, Tenet abruptly left the state, citing what it perceived as overly restrictive conditions placed on its acquisitions by state regulatory agencies.

That was a great disappointment to us, because it essentially scuttled three years of work, and because, more importantly, we were three years closer to 2016 with still no deal in hand.

But then, in 2015, our fourth year, we were fortunate enough to find Prospect Medical Holdings and spent most of that year negotiating a deal with them and resubmitting our application for regulatory review.

Prospect is a health care company based in California that, through the business acumen of its founders, the perspicacity of its senior management team, and the perseverance of its staff, has in the last two decades become an industry leader in what is referred to as population health management.

That is managing all aspects of a health system, inpatient care, outpatient care, physician office care and home health care for a large group of people, in this case eastern Connecticut, with higher quality and lower cost.

Like all health care companies, though, Prospect is not a perfect hospital company. Last year, during inspections at two of its California hospitals, the Centers for Medicare and Medicaid Services, CMS, made determinations that required correction. You'll hear

more about this from Joy Dorin and the folks from Prospect.

It's important to note, though, that our trustees and corporators chose overwhelmingly, the trustees voted unanimously, and the Corporators voted with 98 percent in favor to transfer our assets to Prospect for at least three important reasons.

First, Prospect is not Tenet. They're smaller in size, less threatening as a newcomer within the state of Connecticut, and because they're not affiliated with Yale or Hartford HealthCare, they would actually increase, rather than reduce, competition within our state.

Secondly, the deal we negotiated with Prospect is essentially the same deal we negotiated with Tenet, with preservation of our hospitals, employees and retirees and capital for our future.

And, thirdly, Prospect is a recognized expert in what they refer to as and what you'll hear more about in a couple of minutes coordinated regional care, taking to a new level what began with the creation of our two hospitals many years ago and continued with the formation of ECHN.

Now, for more detailed information on

ECHN's financial condition, I'd like to pass the microphone to Peter J. Karl, ECHN's President and CEO.

MR. KARL: Thank you, Dr. O'Neill. If you can think back this far, 2010 was a milestone year for the country. The Affordable Care Act legislation was passed by the federal government, and what that meant was there was going to be a change in the way health care is provided. Hospitals, health systems, positions will be rewarded for value of care.

A lot of the reimbursement risk will fall on the hospital providers, themselves, and the physicians, themselves.

This fee for service methodology that we have lived under for many, many years, as far back as many of us can even think, is going away.

That's when we made the decision to think about partnering. We recognize remaining independent was essentially the kiss of death.

I would ask that the regulators in front of us please take my next three slides and put them side-by-side, as we did yesterday. It helps to follow along for me to tell the story. That would be slide seven, slide eight and slide nine.

I began at ECHN as CEO at the end of 2004.

As you can see by the top chart, ECHN suffered significant losses prior to me coming here. A lot of this had to do with the merger of the two institutions and some of the difficulties associated with the past merger.

As you can see, though, in the earlier years, fiscal year ’08, ’09 and ’10, you could see that the organization was performing relatively well, not great. Two to three percent margin, two percent margin.

But as you can see below, the situation that we’ve all had to deal with, one is pension funding reform, and then, of course, the market crash. All of that happened between 2008 and 2009, so the liability, our pension liability, jumped significantly, and what that really meant was that we had to begin funding our pension significantly.

In the past, because of the performance of the stock market, the pension funded itself, so that was not a concern.

We, then, of course, had our debt payments, as you can see on the bottom graph in dark blue. Our debt payments were taken into account, and we pay approximately $12 million a year to pay down our debt.

As you can see, we really did not increase our debt very much, except for one year in 2009, where we took out additional debt to replace our Critical Care Unit at Manchester Memorial Hospital.

Back in the earlier years, in 2004, you could see there was a jump. That money was used to upgrade the Rockville General Hospital facility.

What we found during these years is that reimbursement was declining, pension liability was increasing, and then, as you can see in 2015, the government updated the mortality tables for a very good reason.

Everyone was living longer, therefore, the mortality tables had another effect on our pension, which our liabilities then grew significantly.

If you look at the next page, you can see that, in 2014, ’15 and ’16, the hospital tax was put into play by the most recent state government. There was also sequestration that was put in place by the federal government, because they were unable to balance their budget, and then, of course, there were other reductions in reimbursement.

So, if you tie back the second page to the first page, you can see why our income had dropped

significantly. You may even wonder how we were able to survive with these significant reductions in reimbursement, and we were still able to either break even or just barely have a loss, but what that has created is an issue that is explained on the next page, and that is our inability to reinvest in our facility.

We can no longer -- we no longer have free cash flow to reimburse, to reinvest in our facilities, and our facilities have aged significantly.

As you can see at the top, the age of plant is 21 years. What that means is it's about twice as old as the average hospital plant is nationally.

The age of the plant that you'd like to have is around between eight and 10 years old, and what that means is replacing equipment, replacing the infrastructure of the organization, keeping it up-to-date. Ours is very, very old.

How are we able to still barely get by in '13, '14, '15, even though we weren't making any type of income, especially with these cuts?

Well we had to reduce our labor costs, and, therefore, 60 percent of our operating budget is labor. We had to reduce employees. We had to reduce jobs to the tune of 200 positions were eliminated.

We also, as I mention on this slide, we did not reinvest in the facility, so we are limping along. Unfortunately, we are at the end of our rope, and the rope is beginning to fray.

So, more or less, to wrap up our condition, our financial condition, there is continued payment erosion, as I've mentioned, declining levels of payment from the state government, payment reforms with more financial risk, increased pension obligations and rising costs. This is just simply unsustainable.

Now, again, we saw this coming four, four and a half years ago. Not to this great extent, thank you. I just lost my mind for a second. But we did see it coming.

So we went through an RFP process. Dr. O'Neill mentioned that we selected Prospect Medical. The RFP process included several other suitors.

We felt, clearly, that Prospect was the best. Prospect stepped into the shoes of Tenet Health Care. We'll be paying $105 million to satisfy our debts and obligations and have agreed to invest $75 million of capital.

They will maintain Manchester Memorial Hospital and Rockville General Hospital, Woodlake at

Tolland and VNHSC, our Visiting Nurse of Connecticut. They'll continue with the brand, and they will still install a Community Advisory Board.

And just to expand on that a little bit to answer one of the questions that Mr. Salton had yesterday, the local Board will have primary responsibility for the quality program and are delegated to make changes, as necessary.

Corporate provides checks and balances. That will be covered more in the PMH presentation, but we did have a little bit of clarification, because I know there was some confusion yesterday. We wanted to make sure we responded from both parties to that.

There will be a continued commitment to charity care, employment for all eligible ECHN employees, and establishment of a community foundation to oversee the charitable funds that are leftover from the deal.

This community foundation will be an arm's length, independent foundation, not controlled by the new ECHN.

We feel the culture fit between ECHN and Prospect is there. We did our site visits. We visited their organizations, as compared to other suitors. There are always questions about why a for-profit, and my

answer is this. For-profits are able to go to the equity markets. We are unable to do that.

I wanted to make a statement, because I think it's very important. People, some people in the community think that there's a benefit for administration, myself, to sell this organization and that I will be making and reaping in a lot of money for this sale.

This is not a leverage buyout. This is not a hostile takeover. This is a sale of the organization that's been agreed upon by both parties. There is no financial benefit or bonuses for me or for any of the administrators that are on my team. I just wanted to make that very clear.

Thank you very much. I will pass the baton over to Joy Dorin, who is the Vice Chair of the Board of Trustees.

MR. ZINN ROWTHORN: Mr. Karl, before you do that, can I ask for one clarification for the benefit of the audience?

You mentioned that for-profits have access to equity markets, which may not mean a lot to some in the audience, but what is the significance of that, based on the condition of the hospital that you just described

to us?

MR. KARL: Okay. Thank you to help me clarify that. Not-for-profits can only go to borrow money through a bond process, so they go out, and they seek loans, bonds, float bonds.

For-profits are able to go out and raise money through the stock market, and PMH can explain that more clearly.

For instance, PMH, 55 percent of its ownership is Leonard Green. Leonard Green is an equity company, and they are able to go out and raise capital by going, as I said clearly, and, Steve, you can -- Steve can explain that a little bit better.

MR. ALEMAN: Sure. The alternative methods that we have as a for-profit, as Peter was stating, is private equity groups, who ultimately become shareholders and can invest money into the company for growth and operations.

In addition to that, we have access to the open markets, whether it’s additional shareholders or investment banks, who look to provide alternative forms of debt, to raise capital for future acquisitions in growth within the company.

All of those are avenues that we have at

our disposal, we have used in the past, and look forward to using in the future for the growth of kind of our -- Prospect, as it stands in future acquisitions.

MR. REARDON: I wonder if I might just add something, Peter. For a long time, tax exempts had a tremendous advantage, in that they could go out and get taxes and financing through bonds, but do you know what taxes and financing can be used for? Bricks and mortar, and that's not where the action is anymore.

You can't use it for purposes of IT systems. You can't use it for purposes of population management infrastructure. Bricks and mortar is not where the action is anymore, and, so, now it's a huge shortcoming for non-profit tax exempt organizations.

MS. DORIN: Thank you and good afternoon. My name is Joy Dorin, and I adopt my pre-filed testimony.

I've been a member of the ECHN Board of Trustees since 2004 and currently serve as the Vice Chair and Chair of the Transaction Committee.

In my professional life, I've held positions in health care organizations, including Cigna Health Plan, Athena Health Care and Qualidigm, the state's quality improvement organization that works with the Centers for Medicare and Medicaid.

Throughout my career, I've been involved in and responsible for quality, patient satisfaction and compliance matters across the health care continuum.

In addition to my professional background, I'm a longtime resident of Manchester, nearly 40 years. While I was born and raised in New Jersey, I consider Manchester my home.

This is where my friends live, my son and his young family live, and my husband owns a small business on Main Street.

I mentioned my Manchester roots, because insuring ECHN's future is important to me, and it's important to every other individual and family, who lives east of the river.

In evaluating our options, we established four goals, that high-quality health care services are accessible, affordable and delivered safely to the people in this part of Connecticut, that clinical services are expanded, that employees continue to have jobs, and that facilities and technology are upgraded.

Dr. O'Neill talked about the importance of preserving ECHN to serve the public need, and Mr. Karl covered the financial challenges and how the Prospect transaction will allow ECHN to meet these challenges.

I'd like to spend a few minutes focusing on the importance of quality and safety. We are proud of the efforts our staff and physicians have taken.

Of note, ECHN was one of the first networks in Connecticut to become a high-reliability organization.

HROs understand that they operate in an environment of high risk. Industry examples are health care, aviation and nuclear power.

These organizations work hard to manage risk and strive to reduce accidents, but, if they do, HROs will work to learn from these accidents to minimize their reoccurrence.

This decision and journey has changed our culture to the benefit of our patients. It has resulted in process improvements and a reduction in serious safety events.

Our focus on quality has resulted in the Joint Commission recognizing our two hospitals as top performers.

At Manchester Memorial Hospital, we were recognized for heart failure, pneumonia, surgical care, immunization and perinatal care and at Rockville General Hospital for pneumonia, surgical care and immunization.

Because of these accomplishments, it was important that our potential acquirer share our commitment to quality and safety.

As part of our initial due diligence, ECHN requested quality information from all potential acquirers and did a side-by-side comparison of the CMS quality indicators.

We also visited hospitals owned by the potential acquirers and met with staff members involved in quality and performance improvement.

More specifically, visits were made to Prospect hospitals in California and in Rhode Island to obtain additional information and to learn more about the Prospect coordinated regional care model.

When ECHN learned of the immediate jeopardy determinations identified at the Los Angeles Community Hospital and the Southern California hospitals, the Board determined that it needed more information and appointed a quality evaluation team to research and report back to the Transaction Committee and the Board.

I was appointed to the team, along with Dr. Michelle Conlin, the Chair of the Performance Assessment and Improvement Committee and a practicing physician, and three members of ECHN’s Quality

Department, the Vice President of Quality and Safety and two Quality Improvement Managers.

The team was charged with determining whether Prospect's experiences in California could threaten or diminish ECHN's current quality and safety standards and its ongoing performance improvement initiatives.

To complete our charge, the team first focused on the immediate jeopardy issues and deficiencies and Prospect's plans for correction.

The team found the remediation plans to be comprehensive and appropriate, and, in several minutes, a representative from Prospect will provide more information on these issues, their root causes and the corrective action plans.

The evaluation team, however, didn't stop here. We decided to go broader and deeper, and, over the last four and a half weeks, we requested, received and reviewed extensive amounts of information from Prospect about its hospitals in California, Texas and Rhode Island.

This information included past regulatory surveys, remediation plans and year-over-year quality metrics. The quality reviewers focused, in particular,

on the most recent surveys, as they would be most likely to reveal any issues or patterns of concern with how Prospect currently conducts its hospital business in the areas of quality and safety.

The team also looked retrospectively at quality assessment and performance improvement indicators and prospectively at the 2016 Quality Assessment and Performance Improvement Plans.

Additionally, we reviewed employee turnover statistics and, in a parallel activity, collected and discussed updated financial information.

Given that regulatory standards are applied differently among regions, the evaluation team paid special attention to Prospect’s CharterCARE hospitals in Rhode Island.

The evaluation team sent its Quality Department team members to those hospitals for a day-long visit to observe and evaluate the aspects of the quality and safety programs in person.

The ECHN reviewers found not only that the programs were of high quality, but they had been enhanced, rather than scaled back, after Prospect’s acquisition.

Throughout this review, Prospect made its

information and personnel fully available to assist us. As we discussed their plans and approach to quality and safety, Prospect was asked specifically whether or not they expected to receive any additional survey deficiencies.

Prospect responded that, while immediate jeopardy findings were not expected, because of the new quality controls, structure and processes it had implemented, it was likely that additional deficiencies would be noted. This, in fact, did happen.

In the March 23rd CMS response to the Los Angeles Community Hospital resurvey, the hospital was cited for deficiencies.

Prospect communicated this to us on the same day they were notified, and we have since had several follow-up communications with them about these results.

Quality improvement, by definition, is a continuous process. We all know hospitals are complex regulated organizations with many moving parts, and sometimes, despite the best intentions and focus on care, issues do arise.

After the review just outlined, the evaluation team concluded the immediate jeopardy issues

were isolated, that Prospect took the California survey results seriously and responded swiftly with corrective actions.

The evaluation team also collaborated with the Transaction Committee and ECHN Council to evaluate Prospect's continued appropriateness as a transaction partner. The Transaction Committee recommended that ECHN seek a quality commitment letter to ensure ECHN's patient quality, patient experience and safety programs retain their forward momentum for a period of time post-closing.

Prospect has agreed to execute such a letter, which also contains a provision for ECHN to benefit from the quality improvement programs observed at the CharterCARE hospitals and to maintain these programs consistent with industry best practices.

Based on the findings presented by the evaluation team and the protections gained under the quality commitment letter, the Transaction Committee recommended and the Board confirmed ECHN's commitment to proceed with the transaction.

With the Prospect acquisition, ECHN will have responsibility for quality and safety. This means the current ECHN quality team will continue its good work in eastern Connecticut.

In addition, it is anticipated that Prospect's eastern region, which includes Prospect's hospitals in Connecticut and Rhode Island, will collaborate on quality and safety measures that are expected to be implemented in Prospect's hospitals across the country.

ECHN looks forward to this collaboration. Thank you for your time.

MR. ZINN ROWTHORN: Thank you. Can I ask for some signal from the back about whether folks can hear what's being said up here? Okay, thank you.

DR. O'NEILL: That concludes ECHN's initial presentation. Next, I'd like to pass the microphone to Dr. Mitchell Lew, the President and CEO of Prospect Medical Holdings.

DR. LEW: Good afternoon. ECHN and Prospect, committed to this community. Who is Prospect? We are a health care services company that operates local community hospitals. We utilize local governance and local physician leadership.

We make investments in our hospitals and in our communities. Some examples of this would be in Rhode Island. We recently completed a beautification project at the hospital, where we redid the entry, we've

enhanced the GI lab, and we're looking to possibly open a cardiac heart lab.

As far as investments in the communities, in California, we identified two community needs that needed to have some facilities, so we opened two new hospitals, one in Bellflower, it's a psych hospital, and one in Orange County, California, which is an acute med surg.

The stability that we offer communities are continued employment and creation of new jobs. We expand programs and services to improve access and quality.

Some examples of this would be, in our hospitals in Texas, we opened up an emergency room. In California, we've opened several urgent cares and wellness clinics, and, also, in Rhode Island, we've opened several urgent cares in and around the community.

Our hospitals. We have 14 community hospitals, seven in California, four in Texas, and we've owned those for about four years, two in Rhode Island, and it's been coming up on two years, and one recently in New Jersey.

We serve many different communities. I'd like to point out that many of the hospitals that we have

are in underserved communities, and we accept all health plans. To us, a patient is a patient.

We provide medical, surgical, in some cases tertiary, psychiatric and long-term services. We have a lot of experience in proving multiple services at our facilities.

We have over 40 outpatient clinics and centers. A lot of the care in our model is delivered outside of a hospital, because we want care to be appropriate in the right setting.

We're not just a hospital company. We also own and operate medical groups. We've been doing this for quite some time in California. You can think of our physician groups as multi-specialty health care provider groups without walls, and our physicians are linked into what we call Independent Practice Associations, or IPAs, and these are just networks of doctors that work very closely together, and, in these networks, the physician can be independent, on their own, or they can be employed.

Either way, it works for us, and important to note that we are an open system.

As I've mentioned, we've been in Southern California for quite some time, over 20 years. Also, in

Texas. We have over 500 doctors in our network, in Rhode Island, over 350 physicians, and, even in New Jersey, we have about 125 physicians.

We're contracted with all major health plans. We have nearly 9,000 physicians under contract. We take care of nearly 300,000 patients, and we provide coordination of care across the entire continuum, so if a patient is in a hospital or in a nursing facility, clinic, physician office, we follow their care throughout.

Our goal is to achieve better outcomes, with higher patient satisfaction. We want patients to go and tell their family and friends to come receive care here.

Now through our experience of operating hospitals and running physician groups, we've developed a very unique model of care, and it's a delivery model that we refer to as Coordinated Regional Care, or CRC.

And, so, the definition of CRC is the integration hospitals, physicians and other medical and community providers, and I want to emphasize community, because we always work with the community and local agencies, whether it be a home health agency, or a DME, Durable Medical Equipment company, or a palliative

company. We always create the network with the surrounding community providers, but we work very closely with the health plans and the government payers in a very strategic way, because we want to achieve the best patient care and the best outcomes.

We've implemented this model in seven regions, in California, Texas and Rhode Island and currently in development in New Jersey, Connecticut and Pennsylvania, and we've already made great strides here in Connecticut, in terms of setting up our model.

We practice population health management, which is a very popular buzz word, but, to us, what that simply means is that we value the care of every person in the community, and we want to make sure that we take the best care of everyone.

With this unique model of care provides higher value, because, in our opinion, better care does not need to cost more.

So what is our secret? How do we do this? How do we improve care and outcomes? We use a patient-centered and a physician-led approach.

We have multi-disciplinary care teams that take care of high-risk patients 24/7. We have the ability to stratify the sickest patients in the

population and really focus with these teams. The teams consist of nurse practitioners, social workers and pharmacists that follow a patient and are available around the clock, and, if necessary, we will go to the house to evaluate a patient and provide care.

We engage the patient and the family. I spoke already to the homebound program. We take care of specific diseases with specific care plans, such as diabetes and heart disease.

We integrate behavioral health, because we've learned that many patients have coexisting diagnoses. Some are medical diagnoses, some are behavioral health, and, in order to really appropriately and efficiently take care of one's health, you've got to approach both, the behavioral health and the medical health, so we've implemented that into our model.

We have Quality Care Coordinators, who are people that just work the phones. They get patients in to see their physician. They make sure they come in for their screening, their wellness, because those are important, obviously, in taking care of a patient and providing the preventive health measures.

We follow patients in the hospital, skilled nursing facilities, long-term care. Again, this

speaks to our care across the continuum, and, of course, this is a physician-led network.

We are absolutely committed to quality, and we've achieved the highest quality scores across our medical groups.

In California, the largest, actually CAPG, California Association of Physician Group, is the largest trade association in the country. We've reached the highest level of quality, it's elite status, and it's been for four straight years.

Another respected trade association, IHA, has recognized us for things, such as clinical quality, and, in California, the Department of Managed Health Care has recognized us for treating cardiovascular disease, diabetes, and this is some of the disease-specific care plans that I spoke to on an earlier slide.

Out of a five STAR rating, we are four to five STAR on our Medicare Health Plan Quality and Performance Ratings.

MR. ZINN ROWTHORN: Dr. Lew, if I could just ask, by way of clarification? What I'm going to try to do here, I know that you've gone to pains to translate your presentation into lay terms, which I appreciate. It's vital that we make sure that the key concepts being

discussed are understood by our audience.

With respect to your comments on coordinated regional care, can you talk a little bit about what that would mean for a patient at an ECHN hospital, how that experience might appear different from what exists, whether that is a model that, if this transaction were to be approved, would be moved to immediately, or is there a transitional period first? Thank you.

DR. LEW: Sure. Thanks, Perry. So, Perry, traditionally, patients will go to their doctor. They may get admitted. They'll get treated at the physician's office. They get sick, they call 9-1-1, they go to the emergency room, they get admitted to the hospital, they have a lot of whole host of tests done, they're released from the hospital on seven different medications.

They go home, they don't really remember how they're supposed to take their medication, when they're supposed to see the doctor, the primary care, the cardiologist. You've got multiple specialists that see a patient in the hospital.

Family members don't always get the directions and the instructions, because they are at

work, and, so, the patient is not sure exactly what's the follow-up. How do I take my medications? They may call their doctor. They go see their doctor within a week or two, and the doctor says, oh, I didn't know you were in the hospital.

What did they do? Let's get some tests. Let's get the records. Let me look at them. Meanwhile, the patient may -- their condition may deteriorate, and you've lost a lot of time, and you've lost the continuity and the coordination of care between what happened in the hospital and what's supposed to happen at the physician's office, and, so, often, the patient will get readmitted.

Maybe they took their medications the wrong way, or they forgot, the family member didn't remind them, and the patient goes back to the hospital, or the patient may go home and get dizzy, may fall and fracture their hip, then they get taken back to the hospital.

This is very common. I'm pointing these things out, because we see these things happen, and, so, in lay terms, the reason why I want to give this example is because I want to illustrate how within our model the likelihood of something like that would be very low.

So the patient gets admitted to a

hospital. Rather than call 9-1-1, we would probably, if this is a patient that we've identified to be at risk, the patient will likely call our nurse practitioner, who would make an evaluation either by phone or go to the house, the patient's house and say, okay, Mrs. Smith may be in a little bit a congestive failure, a little bit of fluid in the lungs, and we should admit her to the hospital, so we would arrange to have Mrs. Smith brought to the hospital and immediately transfer the care to a hospitalist, a physician, who works in the hospital, to take over the care.

Once the patient is admitted, we begin to start planning, okay, what are going to be the needs post-discharge? And, so, we'll get the appropriate tests in the hospital and the appropriate specialist consultants to come and evaluate the patient and do the tests, and then, whether it's a couple of days, we'll transfer Mrs. Smith to a lower level of care. That might be a skilled nursing facility.

And then our multi-disciplinary team of the nurse practitioner and the pharmacist may go to the skilled nursing facility and say, Mrs. Smith, you have these seven medications. Do you know how to take them? Let me explain to you how to take these medications, so

that you don't get readmitted.

So, again, that's the handoff. That's the continuum of care that these Care Plus. We've branded our programs, and we've called it Care Plus.

And, so, we'll go skilled nursing facility, and then we'll evaluate the home. Is she ready to go home? Does she have the proper support and the proper care taking at home, and then we'll transfer, we'll have the patient transferred from skilled nursing to home.

All throughout this, we're letting the primary care physician know what's going on, that your patient has been admitted to the hospital and is now in skilled nursing, and we'll send the records electronically to the primary care, and then, once the patient goes home, our rule of thumb is, when the patient goes home, got to be seen post-discharge clinic or in the primary care within 24 hours.

So we want her to be seen in the physician's office. If the doc is closed, not available, we setup wellness clinics within the community, and our wellness clinics have multiple purposes. One of them would be to evaluate our patients post-discharge, and, so, Mrs. Smith could go to the post-discharge clinic to

be evaluated, or go to the physician's office, and if Mrs. Smith requires transportation, we'll arrange for the transportation, but now she is locked into our system, if she wasn't already.

She's going to have an assigned case manager that will make sure and follow her care throughout. We've learned that, if you can identify really those sickest patients, it's around five, 10 percent, that's a majority of the spending, and you really got to do a good job of focusing on taking care of those patients.

Perry, that's just an example of within our model, a very simplistic way for the audience to understand how it could work, but, obviously, there are a lot more complexities that we could add to it, in terms of, you know, more complex issues, besides congestive heart failure.

We could talk about how we would, when Mrs. Smith is feeling great and needs her wellness exam, or needs to have the quality measures done, we'll make sure and coordinate that with her, with the physician's office, and help make the appointment, so that she can go back for her other types of screenings. We build that into our model, also. Does that help?

MR. ZINN ROWTHORN: It does. Thank you. So I have just one follow-up. It's a model that relies on interaction and relationships with physicians in the community.

Is it anticipated that the physicians, who currently have relationships with -- privileges or other relationships with ECHN hospitals would continue to have those relationships under Prospect?

DR. LEW: Yes. They would still continue to have admitting privileges, and what we found is it tends to be more efficient to have a designated hospitalist group see the patient, but that's just a general rule.

I mean I think that what's important is that the physician adheres to our standards of how quickly you need to see the patient and make sure and stay on top of it and coordinate with the specialist.

It's not something magical that a practicing physician can't see a patient in the hospital and has to be a hospitalist, but it's more that they do -- the hospitalists tend to do this every day, seven days a week, but we have examples in various markets, where groups of primary care physicians said I want to be part of that panel.

And, so, as long as they can adhere to our programs and work closely with our medical directors, who are all local doctors, right, the physician leaders are all local, as long as they can adhere to the policies and procedures that we've established, I could see a scenario, where we could have local physicians participate.

MR. ZINN ROWTHORN: Thank you.

MR. CROCKETT: My name is Von Crockett, and I adopt my pre-filed testimony.

Dr. Lew had just previously mentioned several of our awards that we've won. I wanted to take a few moments to discuss the issues that Mrs. Dorin brought forward regarding the recent events that have occurred in California and some of the mistakes that were made and the corrective actions that this organization is taking to resolve them and to improve our quality program.

Specifically, in late 2005, during a visit by CMS to do surveys at two of our licensed facilities --

MR. ZINN ROWTHORN: Mr. Crockett, do you mean 2015?

MR. CROCKETT: 2015. Thank you. 2015, CMS, during a survey process, had identified areas where the care that was being provided was not meeting the

standards of conditions for Medicare, the CMS conditions of participation, and they had given the two facilities what's called a deficiency notice of immediate jeopardy.

By definition, immediate jeopardy means that the care and the processes that are currently being provided to a patient could cause harm to a patient.

The deficiencies were specific in the one facility at LA Community Hospital for an allegation of physician misconduct, and then there were two immediate jeopardies at the Southern California Hospital license.

The first one had to do with the temperature and humidity in the operating room, and the cath lab was not being maintained consistently, and then the second immediate jeopardy was the infection control specifically for the washing of sterilization of surgical instruments.

In the three situations, there was no specific patient harm that did occur, that, once again, it was for that the processes could potentially cause harm.

When we received the notifications, Prospect took the allegations very seriously and began steps to do remediation of all three.

From a process perspective, once you

receive a notification of immediate jeopardy by CMS, it's expected to be resolved immediately, and they actually don't leave the facility until the allegation has been abated.

Once it's been abated, then they will issue a report, and included in the report will be other deficiencies that they identify, in addition to the immediate jeopardies.

In each of those cases, there were additional deficiencies that were identified, and they were specific to infection control, patient care, the quality program and governance.

Specifically to the quality program, what the found in the organization was that the quality program was a kind of a static program that was continuing to collect data and information and that it wasn't being adapted in a real time fashion to address the issues that were occurring at the facility, and they saw that the quality program was marching off to one degree and that the quality -- I mean the quality program was marching off to one side, and the organization had issues that weren't being addressed, and, so, there was a deficiency from the quality program.

Once the issues were identified, there

were immediate steps and issues taken to resolve them. One of the first things that was done was that Prospect engaged a national consulting firm that has a track record of assisting hospitals and addressing these type of issues, then they were brought on site for both of the locations.

MR. HENRY SALTON: Excuse me. Could you say when that occurred?

MR. CROCKETT: We received reports in January. I don't have the exact date, but it was approximately January. I don't have the exact date in January.

MR. SALTON: And when you brought on this consulting group?

MR. CROCKETT: Oh, I didn't understand the first question, when you say it occurred.

MR. SALTON: Okay, so, when did you bring on the consulting group?

MR. CROCKETT: It was in January of 2016.

MR. SALTON: Okay and the statement you made about the quality program being static, when was that identified to Prospect?

MR. CROCKETT: Well we didn't get the details of the report until approximately January, as

well, for both situations.

MR. SALTON: Was there a verbal conveyance of the concerns on the quality?

MR. CROCKETT: Not at the time. We actually didn't receive that deficiency until January.

MR. SALTON: Okay.

MR. CROCKETT: When they were on site, they were really focused on the immediate jeopardy issue and making sure that that was resolved, in addition to some other patient care concerns.

The role, in addition to that, the corporate office had started the process of providing additional resources, so that the organization could correct the issues that were identified.

In terms of a root cause analysis and lessons learned, and there were several lessons learned there that are applicable as we move forward, the first one had to do -- in terms of some of the causes, first, before we get into lessons learned, on the cause issue is the one facility, Southern California Hospital, is an organization that is needing -- had previously gone through a bankruptcy and had a substantial amount of deferred maintenance, and we were in the process of doing construction up on the roof, when one of the contractors

had a small localized fire that caught fire and ended up damaging our air conditioning system throughout the facility.

Throughout that process, the organization did not have the appropriate response in resolving it to the degree it should have been resolved, as well as from a timing perspective.

Part of the issue, as well, from -- and that caused multiple issues, in addition to the HVAC system. Secondarily, though, as an organization, we had delegated the role of the quality program to a local level, and, with that, as the organization was dealing with these issues, it was being dealt with at a local level, without the proper oversight at a corporate level.

Lastly, as the organization was needing additional resources, those issues weren't brought forward in a timely fashion, as well.

So in terms of steps to resolve, as it relates to the immediate issue, of the immediate jeopardy issues and getting them resolved, is that the national consulting firm was brought in, and they have several roles that they're actually doing.

The first role is to help us prepare the response, what's called a plan of correction, back to

CMS. From a status perspective, we have, on the LA community, we have prepared a plan of correction. CMS had come out and done a resurvey, based upon that plan of correction. That resurvey occurred in the middle of February.

When they were on site, the issues associated with immediate jeopardy, the quality program and several of the other original deficiencies were resolved, but, during the site visit that they did, did identify two issues still outstanding or new issues.

One had to do with nursing services or patient care, and the second one had to do with infection control. That plan of correction on that one is in the process of being written and prepared, and it should be completed approximately by April the 8th.

For the Southern California Hospital, we have submitted our plan of correction to CMS, and that plan of correction has been shared with ECHN, as well as the regulatory officials, and we’re awaiting at this point for CMS to come out and do the resurvey associated with Southern California Hospital.

I should mention, as well, that, as part of this process, CMS has put us on what’s called a termination track, and, currently, the termination track

for the LA community license has currently now been extended to approximately June 13th.

For the Southern California Hospital, that's currently on a track for I believe it's May 23rd, and our expectation is that we are taking every step associated that's needed to resolve these issues.

Getting back to our engagement with a consulting firm --

MR. ZINN ROWTHORN: Mr. Crockett, if you don't mind breaking there for some points of clarification? We had a very extensive discussion on this subject yesterday in Manchester, and I want to make sure that our audience today has received a similar level of clarity or at least information around what this CMS process means and entails and looks like going forward, so, just by way of terminology first, CMS is the federal regulator that manages the Medicare and Medicaid programs, is that correct?

MR. CROCKETT: That's correct.

MR. ZINN ROWTHORN: And when we talk about immediate jeopardy, you mentioned conditions that might pose patient harm, but the immediate jeopardy referenced is not immediate jeopardy to a patient, but it is immediate jeopardy -- you've been notified with respect

to your hospitals that they are in immediate jeopardy of being terminated from participation in the CMS programs, is that right?

MR. CROCKETT: Well you can actually receive an immediate jeopardy and not be terminated from the program. I don't think that actually how you've articulated it is actually accurate. The immediate jeopardy is actually a level -- it's a deficiency level, and it basically is stating that your care processes are not consistent to the point of immediate jeopardy of concern, as it relates to the patient.

MR. ZINN ROWTHORN: Okay, so, let me say it differently. The threat, that you have been notified by CMS, is that, if these conditions aren't corrected to CMS's satisfaction, that the hospitals will be terminated from participation in the CMS programs, is that correct?

MR. CROCKETT: It is correct, and I think, just in terms of from a context perspective, I want to spend just a second on that.

From a context perspective is that the federal government has what's called conditions of participation, what are basically expectations of how care is provided for patients throughout the United States for hospitals to abide by.

From an administrative process, the federal government does not have a way of imposing penalties or fines, in terms of when organizations either are not -- are not failing to adhere to them, and, so, as a process perspective, in the event that organizations find themselves in the unfortunate situation of not adhering to them, then their only possible recourse is to the threat of removing a hospital license.

There is no other administrative process or penalty associated with that, and, so, by default, it is a way to make sure organizations take this very seriously and to provide every recourse necessary for it to be resolved and appropriately so.

CMS has every intent, when these do occur, is to get the organizations back to the level of participation, and it does happen, but it’s pretty rare, for CMS to actually close a hospital down or terminate the license for it, and they usually do it for two reasons.

One, if a hospital is in the process of bankruptcy or they don’t have the cash to correct the issues that are needing to be corrected, or, two, if they just don’t have the desire to adhere to the rules and the policies going forward.

Most often, the time or the circumstance is that they will continue to work with organizations to the point that they believe that the organizations are no longer improving.

There are many hospitals that have actually received immediate jeopardy and/or terminations, and they're everything from community-based hospitals to large teaching organizations with well-known reputations. Two of those that come to mind is UCLA Medical Center, and, actually, the Cleveland Clinic was in the past recent history put onto a termination track, so we have every intention of moving forward.

MR. ZINN ROWTHORN: Thank you. That's helpful. And just one further clarification. We have been talking about immediate jeopardies with respect to two individual hospitals in California, but the way those hospital licenses are structured the immediate jeopardy notices actually pertain to six hospitals, is that correct?

MR. CROCKETT: That is correct. There's seven hospitals in California, and the Los Angeles community license is a three-campus system, and the Southern California Hospital license is also a three-campus license, and, so, from an administrative

perspective, when CMS does its process, it's on the license.

And, so, even though the issues are predominately two of the six, that all six hospital licenses are impacted by the actions that are being undertaken.

MR. ZINN ROWTHORN: Understood. And, so, you know this, but I'll clarify it for our audience. We have asked you and you have agreed that we will keep the record open in our proceeding, so that we can receive all the communications between Prospect and CMS with respect to these immediate jeopardies.

MR. CROCKETT: That's accurate. Moving forward, in terms of our investment in quality, so, in addition to helping them address the plan of correction, the other aspect that they are working on or that they have completed is to revise our quality program, specifically, making sure that the program at each license is specific to each facility, and that it is addressing from a monitoring perspective the areas of concern that have been identified by CMS, so that not only do we correct these immediately, but there's going to be ongoing compliance with the plan of correction and a monitoring associated with that.

The other thing that they have done is they have gone through our process of looking at our policies and making recommendations to them to making sure that all of our policies are adhering to the Medicare conditions of participation and making them workable from the facility, as well.

From an oversight perspective and getting back to kind of the lessons learned, the quality program at these two facilities, as well as our other facilities, have been predominately delegated down to the facility level.

With that, we are now adding additional corporate quality leadership oversight to these two facilities, as well as to our other hospitals, as well. Specifically, we have created four additional positions.

One will be a Chief Quality Officer, the second will be a Chief Clinical Officer, the third is a Chief Corporate Nursing Officer, and the fourth is a Vice President of Regulatory Affairs and Patient Safety.

The role of these four individuals are going to ensure that we have an active quality program at each of the hospitals, that the program is reflective of the individual issues that are being raised and are being monitored and adapted, as appropriate, that the quality

programs are consistent with the industry standards and national patient safety goals, and that when organizations are not -- when each of these facilities are not meeting the components of the quality program, that they identify the resources and a review of the policies and procedures, in order for the facilities to get back on track and meet those objectives.

These positions are relatively new, and we've got three of the four in place, and the fourth one will be on board shortly.

The third issue is we've established regional hospital quality oversight, and the point of that is that we don't intend to have everything running through California, so, for our east coast facilities, we will have an individual on the east coast to assist with what I've said the four individuals will do, but more on a real time basis on the east coast, as well.

And, lastly, this is something that we have learned in conjunction with our work with CharterCARE, and that, recently, CharterCARE has adopted what's called a high-reliability process organization.

MR. ZINN ROWTHORN: CharterCARE is your Rhode Island?

MR. CROCKETT: Correct. And what we've

seen is that, within the first year of them adopting it, we have seen areas on their quality plan that have started to show improvement, and, with that, we have also reviewed the quality program for ECHN, and they have been a long-time member of the HRO process, as well.

As part of the process that we have recently gone through, in conjunction with working with ECHN, what we have agreed to do, and ECHN has a great quality program, it's very thorough, and it's an adaptive quality program that they are achieving high marks on, is that Prospect has agreed for us to adopt the current quality program that's currently at ECHN, as well as that, from a local Advisory Board perspective, is that the local Advisory Board will be responsible for setting the goals and the components of the quality program, and that the role of the corporate oversight will be really a check and a balance, and what does that exactly mean?

A check and a balance is specifically are they on track, or are they on target? Are the goals consistent with hospital and industry best standards? And in the event that they're not meeting the goals, what resources need to be brought in from a policy perspective and/or from a resource perspective, so that would be the role of the corporate oversight. We have agreed this for

a two-year period.

I want to switch gears for just a second now and talk a little bit now in regards to what do we expect of kind of a post-transaction for ECHN? To do that, I wanted to spend just a moment regarding the operations in Rhode Island, CharterCARE.

We have -- the acquisition is a little over almost a year and a half now, and, after a year and a half, there's been some substantial improvements, in terms of the health care delivery model in Rhode Island, and we're hopeful in expecting the same progress to be made in Connecticut.

First of all, is that the Rhode Island market was made up of predominately a lot of independent physician groups, either ones, or twos, or small groups that were not in an organized fashion.

We have come in, and we have organized it into a multi-specialty IPA, with over 100 primary care providers that now have the ability to contract with health plans as a single entity going forward.

We've increased the employed physicians by over 50. Previously, they had around 18, and we're now over 50 employed physicians.

As part of our population management,

we've expanded the outpatient clinics outside of the service area, as well as an investment in an outpatient oncology center.

From a quality perspective, the organization, the cancer centers achieved academic certification from the Joint Commission, and we have expanded a significant strategic capital, in order for this organization to move forward.

They were in a similar situation, where they had deferred maintenance and weren't able to invest in the equipment and technology they needed to care for their patients.

And then, lastly, Rhode Island, like Connecticut, is a Medicaid expansion state, and, as part of the expansion state, the Rhode Island budget, as they expanded Medicaid, has increased their deficit on the state budget through all the fee for service activity that was occurring for Medicaid.

In working with the legislative bodies up there, Prospect is in the process of implementing a Medicaid managed care pilot project, and the goal of this is to, as Dr. Lew was alluding to, is to have the Medicaid population into an environment, where their care is coordinated, and, with that, we believe that this will

save the state of Rhode Island over $6 million on an annual basis through the pilot project.

As part of our expansion outside of the state of California, in addition to Rhode Island and now in New Jersey, when we looked at Connecticut, there were several favorable things that we found that we believed that, when you looked at our model of working with the health plans, as well as the physicians, would be very favorable for the citizens of Connecticut, in conjunction with us.

The first one is that Connecticut is a Medicaid expansion state and, as such, is going to be needing to have a different way or model of how the care is delivered, in order for it to be remaining affordable to the citizens of Connecticut, as well as the state budget.

The health plans within Connecticut, and this is important to us, are actually very receptive to our types of model and changing from a fee for service into a value-based care.

Later on, Dr. Lew can go into some of the work we've already done in engaging the health plans in Connecticut, and it's been significant.

ECHN, as an organization, already has

high-quality physicians with a great reputation, and it's an organization that is looking for value-based health care knowledge and expertise, and, so, lining up what their needs were with us, it looks like a perfect fit.

When we get on a post-acquisition basis, one of the things that Dr. Lew alluded to is that we don't go out of network with the insurers. That's actually part of our business, and, so, what you see is a different type of relationship, where you see the health plans, the physicians and the hospital actually working together, and it's all focused on the patient.

With that coordination of care, we believe that there will be better care for the patients, as well as higher satisfaction.

Through this, ECHN will have improved access to capital and greater financial strength to insure its long-term financial viability.

MR. ZINN ROWTHORN: Let me take a moment there. Thank you for that. I notice we've been joined by State Representative Srinivasan, and our understanding is you have a difficult schedule today, sir, so we'd be happy to hear from you now, if you'd like to be heard.

MR. PRASAD SRINIVASAN: Good afternoon, Mr. Zinn Rowthorn, Mr. Hansted, and members of the Board.

I want to thank you very much for giving me this opportunity to be here this afternoon and very, very grateful to you for accommodating my schedule and letting me get back to the LOB. I appreciate that very much.

I'm Prasad Srinivasan. I'm a State Representative from Glastonbury, and this is my third term. I'm the State Representative. I'm also a practitioner. I'm an allergist in private practice in the Hartford area.

I haven't come here to drum up business during allergy season, so that's not why I'm coming here, to do that, but we do have an office here, incidentally. (Laughter) My partner comes to Ellington, so we're very much here.

The reason I'm here is for you to consider this partnership between ECHN and Prospect Holdings. As you know, the entire landscape in health care has changed, and it's constantly changing, and, in this landscape, where we are at this point, we really don't know what's coming down the pike for us tomorrow and, obviously, months and years to come.

With that in mind, when you look at the needs of the hospital and you look at the needs of the

patients, it is a changing playing field, and we hope to be able to accommodate the needs of our patients.

Patients, for them, access is very, very critical. Thirty-five years ago, I opened my practice in the Hartford area, and my first satellite was on the other side of the river, and I would always ask my senior partner, whom I joined, what is the big difference? Why cannot these people from Manchester, Rockville and Glastonbury cross the river and come to Hartford?

He says, no, Prasad, you don't get it. There is a mental block about that. People do not like to cross and come over, and I've seen that in my 35 years of practice, so the access is my biggest concern with these hospitals.

ECHN, the two hospitals that form ECHN, are so critical in the services that they provide to the area, and, looking at where we are, and I'm sure, between yesterday and already, you've heard the financial story, so I'm not going to go over that at all, that's not my intent, to talk about the finances of the hospitals, but that is of concern, because unless we have the viability, the financial viability, my concern is for our patients, is what's going to happen to these patients, who live here, and this is their home?

Just the end of last year, late last year, my employee's husband got extremely ill, extremely ill, and to the point that it perhaps may have been appropriate for him to go down to either Yale or to Hartford, because of the severity of his illness, but he chose no.

He said I do not want to go there. This is the hospital that I've been to. This is where my kids were born. This is where I belong, and, whatever happens to me, it's going to happen in this hospital.

Fortunately, he did extremely well. He recovered, and he's back home, and that's the mindset of people that we need to be able to realize and recognize how important it is.

So when you look at the needs for the patient, that's what I'm most worried about, that if these doors were to be closed, or partially closed, or whatever happens, because, obviously, because of financial reasons, what will happen to their services, whether it be primary care services or it be specialty services?

All of them are needed right here in the area, and when we have somebody that it is possible for us to have in this day and age a very, very difficult

landscape here in the best of both worlds, I hope you will give that the utmost consideration.

I know you will. I'm well aware of that, but I hope, at the end of the day, it will be that we can go ahead with this merger.

When we look at this, at the hospitals now, as you're well aware of, the needs of the hospital from a patient point of view have increased tremendously.

Medicine is just outpacing itself, in terms of its technology, and we need to keep track of that. We need to provide the top services. We cannot say that, in this hospital, an MRI cannot be done, or a third degree CAT scan, or all of those procedures cannot be done here, and you need to go somewhere else.

We need to be able to provide all of that, so we can take proper care of our patients, and for that message, that we are state-of-the-art, we will continue to be state-of-the-art, and we will continue to stay here, is very critical.

Equally important, rather than being here only, which is obviously very important, is for us to recruit physicians, to recruit health care providers into the area.

I'm sure you're well aware of the

financial state that our state is in, and, given where we are, it is difficult to recruit people. It is very difficult to get people to come to our state, and physicians and health care providers are no exception.

Six years ago, when I ran for my office for the first time, I needed help in my office. I have advertised left, right and center to get another allergist to join me. Long story short, I haven't got one yet, so that's the climate that we are in, unfortunately. That's the message we have been given for small businesses.

So to recruit physicians for us, to recruit top class technicians, health care providers, the PAs and the APRNs, the message to them has to be very clear. This is a viable organization. This hospital is here to stay. The system is here to stay for years to come, and this is a place you could call home.

So I hope, when you look at it from a financial point of view, which you already heard about, but, more importantly, appeals of our patients, that they need to get their access here, and I fully agree, I fully agree we need to have oversight. No question at all about that.

The labor contracts, we need to look at

them carefully. We need to make sure that physicians and other health care providers don't feel that their jobs are at risk, so should there be oversight? Absolutely, yes, but in the right mix.

When you drive a car, you have an accelerator, you have a brake. You need both of them to go from Place A to Place B, so, similarly here, I hope the oversight will be not be so burdensome, so burdensome that nobody is willing to come to Connecticut. We need to find the right balance for you, me, and, more important, for our patients.

Thank you very much for giving me this opportunity today. I appreciate that.

MR. ZINN ROWTHORN: Thank you very much, Representative.

HEARING OFFICER HANSTED: Thank you.

MR. ZINN ROWTHORN: Can I ask, while we're taking this break for comment, do we have Mayor Champagne in the audience? Do we? Oh, I'm sorry. Thank you. We'd be happy to hear from you, as well, sir.

MAYOR DANIEL CHAMPAGNE: Thank you. First of all, I'd like to take the opportunity to thank you for letting me speak today.

My name is Mayor Daniel Champagne of

Vernon, and Rockville General Hospital is here in my town, and Rockville General Hospital means a lot to me. Both my kids were born there. I met my wife there, because I work there. It's very important to me that Rockville stays open.

I'd like to thank the Office of the Attorney General and the Office of Health Care Access for their work in reviewing the proposal to ensure that residents throughout the service area, including those who reside here in Vernon, will continue to have quality, affordable, and, most importantly, accessible health care.

I'd like to begin by saying Rockville General Hospital is our hospital. It has served as a pillar of our community for nearly 100 years. When it was first established on Prospect Street in 1921, our community donations built it.

When it relocated to its current location on Union Street in 1945, the Tolland County region supported it.

For nearly a century, each time the hospital has faced trouble, the community has pulled together, turning it around with our donations and our hard work.

In return, Rockville General Hospital has been a place where generations of our residents have received accessible quality health care. Today, Rockville General Hospital and the Visiting Nurse and Health Services of Connecticut are Vernon's second and third largest employers, respectively.

My largest concern about this proposed sale is that Prospect is only required to state its intentions for Rockville General Hospital for the next three years.

One reassurance was that Prospect had stated they are not in the business of closing hospitals, but I would like a longer commitment just on paper, because that would make me feel better.

I also requested the Attorney General's Office to ensure that all charitable trusts in the foundation funded from prior donations remain true to the goals of the original donors. The trust should continue to be applied for the good of the patients and the community.

In summary, during these tough economic times, it's important to save our local hospitals to ensure every citizen has affordable accessible care at the highest quality right here in our community.

I don't want to leave Rockville. I don't want to leave the Vernon area for health care when we have it here. We've had it here for a century.

Rockville General Hospital provides medical services to all our residents, including many seniors and those, who live in low-income housing.

These services are offered right in our neighborhoods and backyards, so there's no need to travel long distances, especially if the medical needs are a critically urgent matter.

I vow to do everything in my power to make sure Rockville General Hospital remains a vital part of this community.

Vernon and the surrounding communities rely on both medically and financially for the numerous jobs it provides.

Again, I want to stress that Rockville General Hospital is our hospital. We started it. It began here with the generosity of our residents. It has remained here with their continued support and patronage, and we eternally consider -- and will eternally be considered a community asset for the medical care it provides to Tolland County.

And when I refer to Rockville Hospital,

I've had procedures done at Manchester, too, because some were offered there. I think one of the big losses was when we got rid of the maternity ward, and, having both my daughters born there, it was quite a loss to me. I understand why it was done. It just hurt. I think it hurt our community.

I was very surprised with, not unexpected, but when Mr. Karl stated that he realized that, if we don't do something, it's the kiss of death for our hospital. Taxes are on the rise from the State. We're losing money federally. We need to do something, and looking for a partner to come in and save our hospital is something that is necessary.

Thank you for the opportunity to speak today.

HEARING OFFICER HANSTED: Thank you.

MR. ZINN ROWTHORN: Thank you, Mayor.

MR. SPEES: Thank you and good afternoon. I'd like to say a few things just about the commitments that Prospect is making to the community as part of the transaction, and some of these have been mentioned by Mr. Karl in his presentation, but the first couple of points relate to the key financial terms of the transaction and the purchase price of $105 million.

It's significant not just because it represents fair market value for the assets of ECHN, but, also, as Peter mentioned, it eliminates, together with the existing assets of ECHN, it allows the hospital and the health system to pay off all of its debt, so, upon closing of the transaction, the health system at ECHN will be debt-free, and that eliminates in excess of $9 million worth of capital that has been previously required to pay down debt, as opposed to becoming available for investment in the health system.

In addition to the purchase price, we've committed to make a minimum of $75 million in capital expenditures to be spent or committed to be spent within five years of the closing.

A couple of things of significance related to the $75 million capital commitment. It is an investment in the system, so don't think of it as exclusively investment capital for bricks and mortar and equipment.

It really is intended to develop the coordinated regional care model and increase access points in the system, so while the strategic and capital plan has yet to be developed, it's likely to include increasing access points, particularly on the ambulatory

care side in such things as urgent care centers or additional physician locations.

It's also available for service line development in developing new service lines for the community hospitals, as well as the more traditional capital investments in facilities and equipment.

I wanted to mention a couple of things in follow-up to our conversation yesterday regarding the $75 million capital commitment, and I wanted to point out, after having had a chance to review the language in the purchase agreement, that the $75 million is, in fact, not conditional.

There are provisions that merely call for the potential deferral from the five-year capital commitment, but not the $75 million, and that deferral has to occur in consultation with local community members and with the local Advisory Board, and it's limited to the isolated case, where there is a state action that is discriminatory towards for-profit hospital and health system operators.

In addition to the capital expenditures --

MR. ZINN ROWTHORN: Is there an outside time limitation on how long that commitment could be differed, in the event that the --

MR. SPEES: Yeah, that's not specified in the purchase agreement, so the language in the purchase agreement says with consultation with the Board and the community.

MR. ZINN ROWTHORN: I should say, just for the benefit of our audience here, we did have a discussion yesterday about some concerns that we have about any conditions on the capital commitment as part of our charge here.

A significant part of our charge is to evaluate whether the assets are receiving fair market value, and part of, a substantial part of the value of this transaction, as you've highlighted, is the capital commitment, so any conditions, no matter how attenuated, that suggest that that capital commitment could be altered in some substantial fashion, would be of some concern to us.

MR. SPEES: Understood.

MR. ZINN ROWTHORN: Thank you.

MR. SPEES: In addition to the financial terms, the straight financial terms of the transaction, as has been mentioned, we have committed to maintain ECHN's current charity care policies, or, if we make changes, they will result in policies that are at least

as favorable as the existing charity care policies.

Again, Prospect is about access, and we want to assure the community that that access will remain.

While we are a California-based company, we're very strong believers that health care is local, and the key decisions regarding strategy and operations needs to be made locally, so we are committed to our local management team here at ECHN.

We've called for the establishment of a local Advisory Board, which I'll talk a little bit more about in a minute.

And with respect to the existing medical staffs, they will remain, and, as of the closing of the transaction, they will all become members of the Prospect medical staff.

We've also committed, as part of the transaction, to maintain the hospital services, as has been mentioned, for a period of three years.

Obviously, should we make any changes in there, that would be in consultation with the local Board.

In addition, we've committed to hire all 3,000 employees of ECHN, and you'll note on the slide it

says in good standing, so that begs the question what does good standing mean? In the case of ECHN, really, we do one single pre-employment screen, and that is to make sure no employee is on the Office of Inspector General's exclusion list for participation in the Medicare program.

And, lastly, as has been previously mentioned, at the request of ECHN's Board, we entered into a quality commitment letter to provide that we will maintain their existing quality programs for a period of at least two years.

MR. ZINN ROWTHORN: Mr. Spees, was there a commitment to honor the Collective Bargaining Agreements that are in place?

MR. REARDON: May I answer that?

MR. ZINN ROWTHORN: Sure.

MR. REARDON: There is. There is such a commitment.

MR. ZINN ROWTHORN: And I guess, while we're paused, the three-year commitment that you mentioned and the Mayor referenced is a commitment to maintain the hospital as an acute care hospital or the hospitals, I should say?

MR. REARDON: That's correct.

MR. ZINN ROWTHORN: Okay.

MR. SPEES. So I want to talk a little bit about the Advisory Board, and it actually should be more correctly labeled as Advisory Boards, because each of the two ECHN hospitals will have its own local Advisory Board.

This is a key partnership for Prospect and for our local management teams here. This local Advisory Board really serves as a resource for both Prospect, as well as our local management team, regarding our capital commitment and how those funds should be invested in the health system and with respect to our strategic planning process, which will begin almost immediately upon closing.

It's, also, these Boards will be one of many opportunities for our community members to engage in conversations with both the local teams here locally, as well as with Prospect executives.

In addition to its advisory role with respect to the capital commitment and strategic planning of Prospect and ECHN, the Advisory Board will be principally responsible for medical staff credentialing, and will maintain and oversee our quality assurance program, and, also, will be principally responsible and oversee and manage the accreditation process, so those

activities at the Board level will be principally the responsibility of the local Advisory Boards.

Over time, we expect that the Boards will also support us in our physician recruitment efforts, not only providing input into physician needs in the community, but support our efforts to bring new physicians into the community, recognizing that this commitment that we're making in this partnership with ECHN is not just a one or two-year commitment. It is a very long-term commitment.

In the event that at some point in the future there is a leadership change at the hospital, we would look to the local Advisory Board for input into any leadership change.

MR. REARDON: I was delighted to hear Mayor Champagne mention that Rockville Hospital started on Prospect Street. We're hoping that we'll be able to bring that full circle on there.

Prospect offers a unique health care delivery model. I'd like to emphasize the words health care delivery model. It has been mentioned previously, but we are not a hospital-centered company. We are a physician-centered company, but it's about putting together a coordinated regional care model, which

includes all kinds of components in the community.

It may be surgery centers, it's home health agencies, it's community mental health. We need to have the entire network. We don't have to own everything, but we need that entire network, in order to provide coordinated care to our patients.

Think about that for a second. Mitchell was talking about an example, and the fee for service system we have now is so fragmented. It's so fragmented. You can have a situation, where the primary care doc doesn't even know that their patient is in the hospital.

Under our system, we coordinate care. Somebody knows where our patients, where our members are at all times. We will follow them into the home. We'll make sure that they get better care, and, frankly, it is better care.

In terms of cost, think about that for a minute. I'm going to over-simplify this, but think about it. You go to a primary care doc and you get some tests. Nothing wrong with that.

The primary care doc is doing everything they think he or she should do, and then you go to a specialist and you get some tests. Again, nothing wrong with that. They're trying to do the best they can do.

And then you go to a hospital and you get some tests, and some pundits will suggest to you that at least 30 percent of the fee for service dollar is wasted, and you can see how it could be wasted.

With coordination of care, you actually can squeeze dollars out of the system and reduce cost. ECHN hospitals are low-cost hospitals. We like community hospitals.

No disrespect meant to the academic medical centers. They're the crowned jewel of American medicine, but if you compare the cost at ECHN to a Yale or to a Hartford, frankly, the costs are about $5,000 a discharge more at the academic medical centers, and not everything has to be done there.

And, so, we think it really does promote better community care. We think it really does provide lower cost.

In terms of empowering local physicians, I mentioned yesterday, and I'll say it again, at CharterCARE, with our IPA there, I think as much as a third of the physicians have been attracted to the IPA, even though they had nothing to do with CharterCARE hospitals, simply because they feel empowered, and they feel empowered, because, under the current system, fee

for service doesn't provide the monies, in order to develop coordination of care.

And with the monies provided with risk contracts, you can actually build the infrastructure, like we have developed, in terms of population management, to do real population management, and the physicians are in charge.

No disrespect meant to the managed care companies. We work with them, but the physicians are in charge, and they feel empowered, and they actually get better results. Point blank, they get better results.

In terms of maintaining and creating local jobs, I'll say it again. We are a company, we're a growth company. We're not a contraction company.

In terms of extensive corporate resources, I mentioned population management infrastructure. We have hundreds of people, who will do analytics, will even do claims processing, not because we think it's a sexy business, but that's how we get data. When we medical management, we assist the IPAs, and we assist the hospitals in both respects.

In terms of local leadership, all health care is local, and, so, we really do support the local leadership with regional oversight, and Von and others

have alluded to the fact that, with our quality program at this point, we will have checks and balances at the corporate level.

Investing significant capital, again, others have emphasized this, but it's in the system. It's in the network. It's not just about hospitals.

Yes, the hospitals will get investment, but development of networks will get investment, other things will get investment, as well, because we want to develop a network.

In terms of charity care policies, yes, we're going to preserve those policies. I think I mentioned yesterday and I'll say it again, many of our hospitals are safety net hospitals. We embrace Medicaid and indigent populations.

In terms of Medicaid pilots already alluded to in Rhode Island, we've embarked on a Medicaid pilot project. We'd love to do the same thing in Connecticut.

If I could move to the next slide? We like Connecticut. Let me tell you why we like Connecticut, and we like Rhode Island, and we like New England, and there are a variety of reasons for that.

First of all, there's very little

penetration from a managed care standpoint, in terms of real risk contracting. Prospect has been awarded one of 21 organizations in the entire nation that CMS has said you are a next generation ACO, where you can do downside, as well as upside risk.

There's been very little risk management or risk contracting in the state of Connecticut, and if you look at the SIM program, the State Innovation Model, they're talking about moving as many as 80 percent of all patients in Connecticut to a value-based payment in just a couple of years. We know how to do that. We've been doing that for 29 years. We think we can help achieve that.

When we look at the metrics in Connecticut, in Connecticut, if you take 1,000 patients, Medicare patients, and you talk about how many days you expect them to spend in a hospital, I don't remember the exact numbers, but I think it was 1,400, in aggregate, days in a hospital.

We try to keep patients out of a hospital. In our hospitals in California, we've got the days down to about 700, as opposed to 1,400, and that doesn't mean it hurts the hospitals. To the contrary.

We have a saying; more and better for

less. If we do a better job and we do it for less money, we're going to get more patients, and that's what we've seen as volume increases.

There are other things that really -- there's still a fragmented physician market. We work very well with independent physicians, and, in terms of attracting physicians to a marketplace, we've had tremendous success up at CharterCARE.

We've got a whole new vascular surgery group that came in from Massachusetts. We've attracted general surgeons when we've been told, oh, you can't attract those folks. We have, because they feel empowered.

And, so, we think that Connecticut is a tremendous opportunity to really transform the way health care is delivered in the state. Again, our model is disruptive innovation, is what it is.

Last slide, whoever has it. Oh, thanks. So our goal, our goal really is the triple aim. We really do think with our model, and I mentioned yesterday I've been around for a couple of years, but I was attracted to Prospect, because I really do believe they have the special sauce to do this; higher quality care, higher patient satisfaction, highest value, lower cost.

We're very excited about the possibility of working with ECHN in Connecticut. And, with that, that concludes our Direct testimony from Prospect.

MR. ZINN ROWTHORN: So let me ask one question, by way of clarification. Again, for the purpose of making sure we're talking in terms that people can understand, you've mentioned risk or value-based contracting a few times, and I think you're making a contrast to fee for service.

For example, in the Medicaid case, you might, under a fee for service contract, you had paid per procedure that you provide, but am I right in understanding risk base? You would get paid a certain fixed amount per patient or per number of patients, and whatever care they get, you're only going to get paid that one amount?

MR. REARDON: I will defer to Dr. Lew on that, but essentially correct. What we do with these risk contracts, like in California, where it's very advanced, is the managed care companies will pay us 90 cents or 88 cents on the dollar, they will do the marketing, we'll do everything else, and we're basically responsible for the care of that patient completely.

It has to come out of the budget we have,

and we've developed systems to do exactly that. Mitchell, do you want to elaborate?

DR. LEW: Yeah, Perry, that's correct. Traditional fee for service physician, the hospital gets paid per unit, so more volume, more money they make.

We're evolving into a more value-based type contracting system, where I guess the first step would be physicians, hospitals would get rewarded if they are able to save on total cost of care, and then a more mature level beyond that would be to take what we call global capitation, which is, again, a fixed amount to take care of a population, whether they pay for the hospital care, pay for the physician care.

And Tom referenced the ACO, and, so, CMS has come out with ACOs as a way to really move health care delivery models into the direction of coordinating and managing care quality, but, also, cost, so the leaders that are doing this have started and moved along, and, as Tom referenced, our company is fortunate to be one of only 21 health systems in this entire country to be approved as a next generation ACO, which is the most mature model so far that's put out there by the government.

We've been far ahead of the curve in

California, and it's just a matter of time before other states adopt these models, and, so, the sooner that we can come and implement the model I think ECHN will be well ahead, and we will be leaders, leaders in transforming the delivery model in the state, and then be able to go to the Governor and propose Medicaid pilots to provide a better quality of care, but, also, save the state and their Medicaid spending, and that's what we do with the commercial health plans, also, and they get it, but, again, it's a step-wise process.

I don't think we'll go directly to global cap on day one, but it takes time to get there. The initial stages of just setting up the structure, setting up the network, and we talked a little bit about this yesterday, establishing a risk-taking entity and the necessary licenses, we've already done that here in Connecticut, and we've engaged the plan.

Our goal is to hopefully be approved and, when the deal closes, to have our structure established and have engaged in signed contracts with the health plans.

And I think, over the next several years, we'll be all staring at capitation, which is great. It's a good way to do it. The docs love it, and I think the

patients will see the results of it, in terms of better care and higher patient satisfaction.

MR. ZINN ROWTHORN: Thank you. At this time, we'll take a 10-minute break, and, then, when we resume, we'll have public commentary. I don't know where the sign-up sheets are, but this would be a good time to get your name on it, if you want to. Thank you.

(Off the record)

(Whereupon, the public spoke.)

HEARING OFFICER HANSTED: We are going to continue with today's hearing, and we'll turn to OHCA's questioning. Mr. Lazarus, if you want to begin? Just give him a couple of minutes.

MR. ZINN ROWTHORN: Before we lose members of the public, who may be leaving, I'd invite you to stay for this portion of the discussion, because what I'd like to do, with the consent of our friends from OHCA, is ask the Applicants to address some of the concerns that we've heard articulated by members of the public.

And, so, I'll point you to, I think, some concerns that stood out to me as themes, and I know we heard this from Mrs. Fisher when she spoke, and she wanted to know why we ought not wait until the CMS concerns are resolved before you proceed with this

transaction, so I'll open that up to you and be interested in your thoughts in response to that question, and anyone can take that.

MR. KARL: This is Peter Karl, CEO of ECHN. I thought the testimony that was presented by us was quite clear. The burden of the additional taxes, the burden of some of the federal reductions in reimbursement has led to the demise of the independent hospital as we know it, and for us to delay any longer would put the organization as a whole in total jeopardy, as it relates to survival for the long-term.

There are bond covenants that need to be met, and what that means is, with the amount of debt that we currently carry and have carried for many, many, many years, there's certain measures that we have to meet.

With these most recent taxes that were put on by the state of Connecticut, we will no longer be able to meet those bond covenants, and, if that happens, the bond insurers will come in and strip down the organizations and most probably make a significant recommendation to consolidate all services at one institution.

There isn't time to wait, and, very quite honestly, we've done a very deep dive into the quality

issues that occurred out in California.

We spent many hours, day and night, looking into them. We are confident that Prospect is the right partner, and waiting any longer is too dangerous for the survival of the organization.

DR. O'NEILL: This is Dennis O'Neill, Chair of the ECHN Board.

To be perfectly honest, we did entertain that idea. The trustees and the Transaction Committee did discuss at great length whether it would be prudent, more prudent to wait until these issues were resolved, reconciled, and then come back to the bargaining table, so to speak, but the short answer is we're running out of time.

As Peter stated, within months, if not before, we will trip our bond covenants, which will set into motion a number of deleterious effects for the organization from a financial standpoint, so we felt, I'm talking about the trustees, we felt it was better to proceed with the transaction working with Prospect to assure that the quality programs that we have in Connecticut remain intact and are, if anything, enhanced, rather than table the deal for some time period and allow the organization to continue into financial jeopardy.

We thought it was basically better to proceed and work with Prospect to maintain our quality, rather than continue into financial jeopardy.

MR. ZINN ROWTHORN: Dr. Lew?

DR. LEW: Yes, thank you. Again, to review what the agreement and the understanding, as it relates to quality in California and the quality program with ECHN, you know, what happened in California certainly is concerning, and Mr. Crockett went over what we're doing to address it, and we're very proud of what ECHN has developed in the area of quality and being a high-reliability organization.

And, so, we did reach an agreement, and it's in writing and signed, that we will support that program, and, so, we're not bringing California's quality program to Connecticut.

We're going to support the existing program that Connecticut has, as we have done in Rhode Island. Rhode Island has their program, and we let them control locally what that plan is, and they manage it, and we just serve as a check and balance system.

And to use the nice lady's analogy on being an educator and a student, you know, if you want to look at us as performing an F on the test in California,

that student is not coming here to tutor Connecticut on quality, okay?

We're going to tutor that student in California to become an A, and that California student is going to continue to be an A student with our support.

MR. ZINN ROWTHORN: Anybody else want to address that, that point?

MS. MARTONE: I would like to ask Prospect, specifically, if you can address three things that the public brought up last night and tonight, today, and that would be the independent monitor, the independent ombudsman, and the submission of some type of form of the contents of a 990 Form.

HEARING OFFICER HANSTED: We'll take a two-minute break, just so you can converse on that.

(Off the record)

HEARING OFFICER HANSTED: We're back on the record. Thank you.

DR. LEW: Kim, I'm going to have Tom Reardon answer questions one and two.

MS. MARTONE: Sure.

DR. LEW: And Steve Aleman will answer question three.

MS. MARTONE: Thank you.

MR. REARDON: In terms of an independent monitor, we're absolutely open to that for a period of time.

MS. MARTONE: Okay

MR. REARDON: What was the second question?

MS. MARTONE: The ombudsman.

MR. REARDON: Oh, ombudsman.

MS. MARTONE: The independent ombudsman.

MR. REARDON: We think the independent ombudsman would be duplicative of what we have the Advisory Board doing. Furthermore, as Peter will point out to you, we have all kinds of patient advocates within the system, itself, so we think it would be duplicative.

MS. MARTONE: I think the concern that was addressed yesterday was the fact that they wanted to make sure that he was an independent ombudsman that wasn't directly picked from hospital management that people could go to. Is that what will be part of the local Advisory Board?

MR. REARDON: Well the local Advisory Board is independent. Those community members, who will be there to listen, and, as Peter said, there's been a process, whereby the corporators, 300 of them, elect a

Board, and it's constantly rejuvenated, and, so, I think there will be independent folks on that Advisory Board, and, again, we think it would be duplicative to have additional requirements.

MS. MARTONE: Okay.

MR. ALEMAN: And related to the request for disclosure, such as the information, the 990, Prospect has supported transparency in Connecticut, as we have worked through this process and transactions in other states.

This isn't the first time that we've encountered it, and we've worked very closely, for instance, with the Department of Health in New Jersey on transparency and disclosures, and, actually, they moved forward to ensure that for-profits had similar disclosures as the not-for-profits, and we've supported that, worked directly with the Department of Health, and we support that here in Connecticut, as well.

MS. MARTONE: Okay, thank you. And, going to that, do other states, or have other states required you to have independent monitors, or ombudsman, or any type of individual?

MR. REARDON: In Rhode Island, there were conditions of approval, and there was an independent

monitor, my recollection is for three years, to make sure that those conditions were upheld and implemented.

MS. MARTONE: Okay, but not an ombudsman or any type of individual?

MR. REARDON: No. Not to my knowledge, no.

MS. MARTONE: And then Steve had questions about it, but since we're here at this point, in terms of the community health needs assessment, you know, we discussed that last night, and the importance that OHCA puts on that, in terms of not just evaluating Certificate of Need and looking at clear public need, but ensuring that there's access to high quality and affordable services in underserved areas most of the time, so we do require hospitals to participate in community health needs assessments.

All hospitals in Connecticut submit their implementation plans, as well as any data, sometimes that we need in order to evaluate that, and you had confirmed that there was a willingness to participate, correct, and involve the community and its members and other providers in conducting a needs assessment of the area to determine needs, and you also explained how you also have metrics and analytics that are exceptional and enhanced, if you

can talk to that.

DR. LEW: Correct, so everything you said can, in terms of the needs assessment, local input, local advisory, but we certainly want to make sure within our model that there is access to care within the community, whether it be through a physician's office, a community clinic, an urgent care.

I spoke earlier about having these clinic sites for post-discharge patients recently discharged from the hospital. Very important for us to make sure there is access and primary care driven and central around -- primary care being central.

We would look, and we often work with health plans, and in states, where we have pilots, we have to make sure that there is adequate access. There are very strict requirements on that.

And we don't want our patients having to travel far for their care, because, if they have to, they won't go seek care, so it's just part of our overall analysis that we undertake to make sure that it's convenient and comprehensive.

MS. MARTONE: Now, again, the same question. Are you required in other states to participate in a community health needs assessment? Have

you conducted any yourselves, or with other partners?

MR. CROCKETT: Yeah. In the states that we're currently operating in, the answer is, no, we're not required to, and, so, the community needs assessment we do is mostly working through with our physicians and our Advisory Boards, in terms of accessing the information that's needed.

MS. MARTONE: Okay, so, it's not like a community health needs assessment that's required by the federal government, per se, every three years?

MR. CROCKETT: Yeah, not as how you're defining it or how it's currently being operated in Connecticut, no.

MS. MARTONE: Okay.

HEARING OFFICER HANSTED: Is there a specific document that's created by PMH with respect to those findings?

MR. CROCKETT: No. It's going to be a local, I mean it's going to be done at the local level as part of the strategic planning process.

HEARING OFFICER HANSTED: Okay and what is typically done in the other states on the local level, in terms of a, quote, unquote, "community health needs assessment?"

MR. CROCKETT: Well, I mean, by definition, we don't do a community health needs assessment. The issue is, you know, from a community perspective, the issue is are the services being provided, and are they appropriate, and what are the gaps associated with it?

It actually really starts with a process of us moving away from a fee for service environment into a population management program.

When Dr. Lew was mentioning the data analytics associated with it, as we start the process of taking over the total responsibility of care for the patient, it's looking at the outpatient services that are currently being provided, as well as the inpatient services and the tertiary care.

And, so, when community members are having to leave their community to get those services elsewhere, because the hospitals can't provide it or they don't have the outpatient resources for it, then we look at, if it's onesie, twosie, the answer is no, but if there's a substantial amount of the community that needs to go outside of the community and travel outside of the community, then that's a, from our perspective, a need within the community that's currently not being provided

by -- it may be even not even just us, even our competitors, if they're having to leave the community.

From our perspective, it starts off with this. What does it need to do to coordinate, actively coordinate the care of the patient and have the community members not having to leave the community, and that's, from a data analytics perspective, that's where really we start the work at.

DR. LEW: Kevin, let me give you a practical example. Again, we talked about local physician Boards, and they have respective committees.

We will look at -- we have data, and we can look at where patients are going for their care. They're showing up in certain emergency rooms, and then, as we migrate to these value-based contracts and you get more data, you can see that -- let's say you have 10 primary care physicians and 1,000 patients attributed to those 10 doctors. That may be only a small percentage of those patients are actually staying locally for their care, and they're having to go further away for their care.

We have the ability to look at that data, and, so, we have to create better ways to make sure that they can come in and stay in their towns and not have to

cross this river that everybody is talking about, and, so, that, again, is look to see should we open an urgent care? Should we be reaching out to these patients and let them know that we can offer transportation, so it really starts grass roots a lot of times, but supported by data, so the local docs are hearing that their patients are ending up elsewhere, so we come in and support them and figure out the solutions to keep everybody in the community and not have to cross that river.

HEARING OFFICER HANSTED: Okay, thank you for that, Dr. Lew. I appreciate that. What I'm getting at is, yesterday, there was testimony that PMH will support ECHN with respect to community health needs assessments for I think it was through 2018. Correct me if I'm wrong.

What happens after that point? What is submitted to OHCA, if this were to be approved, in terms of a community health needs assessment? And there may very well be you'll continue to support them, and they will continue to submit a community health needs assessment.

Absent a formal community health needs assessment, what does OHCA look at to ensure that the

needs of the community are being met and planned out?

DR. LEW: Well I would say, you know, OHCA should look at making sure that the care is staying local and it's not leaking to other states or other towns within the state.

I would say that OHCA should look at the level of patient satisfaction, look at the outcomes, look at the quality measures within the population that's being managed.

HEARING OFFICER HANSTED: Okay. All right, thank you.

DR. LEW: Sure.

MR. LAZARUS: I have a follow-up. Now you've been in Rhode Island for two years, right?

DR. LEW: Two years in June, yes.

MR. LAZARUS: Have you conducted a CHNA there? Has PMH been involved in doing CHNA there yet?

DR. LEW: A community needs --

MS. VOLPE: Yeah.

MR. CROCKETT: Not a formal one, as it's being defined here.

MR. LAZARUS: Okay. The way you've defined it, has one been done, conducted there?

DR. LEW: Oh, yes. Absolutely. Yeah.

When I spoke to the percentage of leakage outside of the service area, a lot of business and patients were going out of network and going to other systems, and now that we have data and figuring out a way to reach out to patients, we've actually doubled the amount of patients that are coming now to our system and not having to go outside for their care.

And as part of the pilot that we're doing with the state of Rhode Island, very closely, as the population gets mapped through the health plans and assigned to our network, we have to absolutely make sure that there's the behavioral health, the medical health components, and we have to work with the community clinics. That's being looked at very closely.

MR. LAZARUS: Would you be able to provide us a copy of an example, say, from Rhode Island that we could perhaps look at to get an idea of what you're talking about, the analytics?

DR. LEW: Sure.

MR. LAZARUS: Because we understand the community health needs assessment, as it's performed in Connecticut, and we're trying to understand PMH's definition of the community needs health assessment.

DR. LEW: Steven, when you want the

report, what information, like what questions would you want answered, so I can try to get the right --

MR. LAZARUS: Well is there a report that's created, generated that tells you the needs of the community?

MS. MARTONE: Because like what we typically see, say, in the community health needs assessment filed by the hospitals, you know, they hire a consultant, and they have partners and community providers that are part of this big work group, and they may do phone surveys, they may consult with different partners, and they assess the needs of the area, and, so, then they make a list of what they're recommending, in terms of what needs to be done in the area that's not certainly being done, in terms of unmet need.

MR. CROCKETT: In addition to what Dr. Lew was mentioning, and this was done in conjunction with some of the work that the IPA part of our division was doing, as well as our local Advisory Board, that two additional areas that were being underserved within the area was OB services, as well as cardiac care.

And, so, as part of that analysis, CharterCARE has recently submitted applications to the Department of Health in Rhode Island for those services

to be performed at CharterCARE, and, as part of that process, there was a needs assessment that was completed that would be consistent with how you've outlined it, so, from that perspective, we would be willing to provide you with the application that shows the needs assessments for those services.

The needs assessment, from our perspective, is an ongoing issue. We don't do it, you know, once every three years, do it once every four years. It's kind of more of a living, breathing process as we go through population management, so what I would consider for this first two-year process, this would be kind of our first step in looking at those needs, but I think it's substantial when you look at it.

MS. MARTONE: We want to ensure that the community is involved. We want to make sure that physicians, providers, other providers in the community are involved. That's all we're looking for really, in terms of this assessment, so it's not just your assessment, but it's the community's assessment, and that's what we're trying to ensure here, that we want to see an implementation plan that actually shows what you're going to do, how you're going to implement it, who is going to be involved in it, and when it's going to be

done.

So if you're identifying behavioral health as a need, then we want to see a detailed plan, in terms of how you're going to do that. Okay.

MR. LAZARUS: So that's something you have an example of.

HEARING OFFICER HANSTED: Yeah. The Rhode Island application you mentioned that you're willing to submit, why don't you provide that?

MS. VOLPE: To be responsive to you, we will look at that. It may be a needs assessment, like we've seen with other CON applications from consultants, and that isn't what you want.

MS. MARTONE: Thank you.

MS. VOLPE: So I think, just so there's no miscommunication, let us go back and look and see if there have been an assessment, based on the description you've provided, and we will research that.

As has been stated in testimony, as a for-profit, they're not required to do a traditional community health needs assessment, because that is a creature of tax exempt hospitals and a compliance issue, and it's expected that OHCA would get that response, because it's required of tax exempt hospitals.

So let us go back and see if, in fact, we've done an assessment similar, along the lines that you're looking for, okay? Because I think, and I don't know this for sure, but if we were to produce the Rhode Island one, I don't think it's what you'd be interested in, because it could be more of a consultant needs assessment that we all are familiar with that many of the hospitals here use to support a service they want to implement, so it's not different, but I think it is different, in terms of what you're asking for.

MS. MARTONE: Okay, thank you.

HEARING OFFICER HANSTED: Thank you, Attorney Volpe. And if you do have something that you're going to submit, that will be Late File No. 9.

MS. VOLPE: Correct. Yes.

HEARING OFFICER HANSTED: If you do not have one, please send us a letter to that effect.

MS. VOLPE: Yes.

HEARING OFFICER HANSTED: Thank you.

MR. ZINN ROWTHORN: I had a couple more issues I wanted to touch on out of the public commentary, and I know you may feel that like you've addressed this issue in some detail in your materials and last night and perhaps some today, but, clearly, there remains a

question the mind, at least to some of the people in this room, who spoke to us, Mrs. Burke and others, about why ECHN did not partner with one of the local health systems, who are all non-profit.

I'd be interested, maybe Dr. O'Neill or Ms. Dorin, to hear. Perhaps you could address that.

MS. DORIN: So, as mentioned, we've been involved in this process since December 2011. When we first undertook the decision to seek out a partner, we actually established five criteria.

The criteria that we were looking for in a partner was whether or not that partner would bring organizational strength and capability, whether they had a strategic vision for serving the health care needs of our market, Manchester, Rockville, Vernon and the surrounding towns, whether or not they had the financial strength to be able to help us with our debt, and whether or not they would actually be able to implement the deal.

It's probably not a surprise. I mean we got proposals from two of the larger hospital systems within the state, and, for a variety of reasons, those didn't fit the criteria.

Two of them we would have significant implementation risks, because of anti-trust issues. We

felt, considering the five criteria, in conjunction with the visits that we made to California and to Rhode Island and the culture that we could actually see and feel in those facilities and from talking to Prospect, that Prospect was, by far, the best fit for us.

The process that we went through was extensive. It took a long time, and I feel very comfortable that we've made the right decision.

As I mentioned last night and today, I live in Manchester. I've lived there for 40 years. I want to be able to look my friends and family in the eye when I see them in the local supermarket, which is right around the corner from where I live, that we have made the right decision, and I feel that we have. I have no qualms, whatsoever.

MR. ZINN ROWTHORN: I appreciate that, and I think, in fairness, it is worth probably pointing out that, originally, the transaction that you initially sought was with Vanguard, which became Tenet, which did have, as a participant in that transaction, the Yale-New Haven health system, is that correct?

MS. DORIN: Right.

MR. ZINN ROWTHORN: And then, to the point that you make about anti-trust concern, I think, to

clarify that reference, I think what you're suggesting, and you can correct me if I'm wrong, is that were you to partner with an existing health care system in Connecticut, you would be reducing the number of competitor health systems in the state, as opposed to partnering with a system that doesn't currently have a presence in the state. Is that your point?

MS. DORIN: Correct.

MR. ZINN ROWTHORN: Dr. O'Neill, did you want to answer?

DR. O'NEILL: If I can just add, in the latest round, we had offers from Hartford HealthCare and Trinity, the for-profit entity that has recently acquired St. Francis.

In the case of Hartford HealthCare, it was not an acquisition of ECHN. Their most recent offer was a partial purchase of some of our most profitable lines, namely, our VNA, and they didn't offer to diffuse our debt or take on our pension liability, so it was an offer that we thought was financially not feasible.

Added to that was the anti-trust issue. We were advised by legal counsel and Hartford was advised by their legal counsel that the likeliness of an acquisition deal would be very low from an anti-trust

standpoint.

In other words, we would be requested by the FTC to have a second opinion, which would delay it another year, and the likelihood of it being denied was relatively high, so we felt we didn't have enough time to go through that process, even if we wanted to go the Hartford Health route.

In the case of Trinity and St. Francis, it was based on two issues that we felt that it was not feasible. The first was women's health issue. We felt, being part of a Catholic system, would significantly reduce access to women's health for residents in our market, in our 19 towns east of the river, and we heard strenuous objections from our obstetrical department and from a number of community members, that that was not a good alternative for eastern Connecticut.

Added to that was we had an issue with the way Trinity's management would manage ECHN east of the river. We've requested, but we did not get the assurances that we needed, that the management of our health system would be in the best interest of eastern Connecticut, as opposed to the best interest of Trinity corporate and St. Francis in Hartford.

So those are the reasons, basically, that

we decided that Prospect was the best option for us.

MS. DORIN: And if I could just add one other thing to that? Again, when we set out on this selection process, what we wanted to make sure was that care was accessible, affordable to this part of Connecticut.

As many of the individuals, who commented today, maintaining health care locally is very important, and our feeling on the Transaction Committee and, also, on the Board was that, if we were to partner with Hartford HealthCare or Trinity, St. Francis, that, bit-by-bit, year-over-year, services would be taken out of this market and brought into Hartford, so our goal in selecting a partner would not have been satisfied by seeking one of those as our ultimate partner.

MR. ZINN ROWTHORN: Thank you for that. I'll ask a question that I asked last night, and it reflects some of the commentary that we received here this evening, about the continuing engagement of the hospital system with the communities beyond perhaps the Advisory Board, and I think what that question reflects is what you already know and what you're here again tonight, which is that there's a real sense of value in the communities for these hospitals, almost a proprietary

sense that the hospitals are a community asset.

What I'd love to hear you address is, and maybe the way to address that is both to talk about what the local Advisory Board will -- how it will be empowered and constituted, but, also, other thoughts that you would like to share with the folks here tonight, about how the communities will be able to continue to have that sense of engagement with the hospital going forward.

MR. KARL: Thank you. Perry, we had the discussion this morning about that exactly, because I know that was brought up.

So how it works twice per year, and we're happy to go forward, actually, and open it up more, is we do semi-annual updates to our corporators.

We bring them in, 300 people, feed them dinner. That way, we know they'd come, and we give the state of the onion, State of the Union. We speak about truly, you know, what the organization is going through. We've educated them over the past four and a half years about where -- what struggles we're having.

We educate them on, obviously, on the Affordable Care Act, the detail of the Affordable Care Act, really moving towards value care, so on and so forth.

What I see going forward and what I'm very comfortable doing is holding two open forums, community forums per year, perhaps one in Manchester, one in Rockville, inviting the public to come to them, to give them a State of the Union on how the organization is performing, review what's new in the organization, what's happening, what's been invested in the communities, and, you know, truly educate them and educate them on how rapidly health care is changing, and let me just add one thing to that, and we spoke about this this morning.

I hear the community loud and clear. Health care 10 years ago, 60 percent of our revenue and our volume was inpatient. Forty percent was outpatient.

Seventy percent of the revenue that comes into the organization now, ECHN, is ambulatory, is outpatient, so the way we think of hospitals of the past is completely different than how they truly function today.

If you look at a Rockville hospital and you look at a Manchester hospital, 10 years ago our census -- we have licensed beds of 300 at Manchester. Ten years ago, you know, we're running 200 and something beds over there. We have a 100-bed hospital here. Ten years ago, we were running 80 patients. We now run about

36 here, and we run about 110, 115 at Manchester.

There's nothing wrong with that. It's because, 10 years ago, you were admitting patients when they didn't need to be admitted. Technology has changed, has changed dramatically, and I think that's what's getting lost in the public, and shame on us for not being able to educate them well enough, so they better understand that, and, so, you know, I would commit to doing that on an ongoing basis.

MR. ZINN ROWTHORN: Thank you.

DR. O'NEILL: Just to build on that, we have, in our not-for-profit, governance structure right now. We have 300 corporators, and I think we do actually a pretty good job of educating them.

MR. ZINN ROWTHORN: Could you just explain what a corporator is?

DR. O'NEILL: Well a corporator in our governance structure is the body of people that governs the organization, that elects the trustees and approves any major decisions, such as a sale of the organization.

The corporators historically were the ones who gave money to build the hospitals, and, from a governance standpoint, that's how they've been worked into the system, so, as Peter said, we meet with them on

a regular basis. Many of them serve on our committee structure, and I think we do a pretty good job of educating them, as evidenced by the fact that, when we went through this process of explaining to them why we needed to be acquired, and then we went through the whole thing with Tenet, and then we went through the most recent iteration with Prospect, 98 percent of them approved the acquisition, and they're independently-minded people, just like the folks, who have come in today to talk to us.

You can't please everyone. You can't please all 300 of them, but a 98 percent approval rating I think is a testament to the fact that we have educated them over time, and that they do see the wisdom in our course of action.

So going forward, even though, in a for-profit governance structure, we wouldn't have 300 corporators, we would still see the value in meeting with community members on a semi-annual basis to do basically the same process.

MR. REARDON: If I could just make a quick comment, Peter and Dennis? I've had the privilege of attending two of these corporator meetings, and although you're right, there's education that goes on in one

direction, believe me, there are no bashful people at these meetings. There's education that goes both ways.

And I said yesterday, and I'll say it again today, as much as we at Prospect want to be part of this community, we will never know this community as well as the community members do, and, so, we want your input, and the idea of a Town Hall meeting a couple of times a year and open it up to more than just corporators is a terrific idea, I think, so I think we would support that.

MR. ZINN ROWTHORN: Thank you, Tom. Tom, I appreciate that, and I think what I'll ask to hear from you guys on the Prospect side of the table is the community does, as you say, know the folks on this side of the table. They don't know you, just like you don't know them.

Were this transaction to be approved, do you have a commitment to have national leadership from the organization participate in some of these events or other opportunities to hear directly from the community?

DR. LEW: Perry, similar to what we talked about yesterday, in terms of the multiple touches through the model that our network managers would have with the community, that's one way that we would do it, to hear the concerns of the community, as it relates to their

care, but, to specifically answer your question, national presence coming to these meetings, that would be fine. I'd love to.

MR. ZINN ROWTHORN: Okay, thank you, Doctor. I'll raise it here, because you heard it, and it's the issue about local taxation. Now it's not part of our review. It's beyond the scope of our review, obviously, and, currently, as a non-profit, that your organization is not locally taxed, I'll give you the opportunity to address what Prospect's plans are with regard to tax abatement issues.

MR. REARDON: Shall I respond to that, Mitchell? First of all, I heard the comments last night, and I heard them again today.

I think there's, frankly, a complete misconception, as to what we have in mind here, and I've read it in the press, too, and I just think there's a misconception.

Right now, ECHN does not pay taxes. They're a non-profit. On day one, ECHN is a for-profit organization and will pay taxes. It will pay sales taxes, it will pay personal property taxes, and they will pay real property taxes.

We have approached both Vernon and

Manchester, and they're awaiting a proposal from us, and we will submit a proposal. I can't get into the details of what that proposal will be, but what I can tell you is, in Rhode Island, what we did there was we looked at the pilot payments.

The pilot payments are the payments that the state makes when you have a lot of non-profits in your town, and it's not 100 percent of what the property taxes would be.

And what we've done in Rhode Island is we started out with both Providence and North Providence with the pilot payments being a floor for what we would do.

And, by the way, pilot payments, from everything I've heard, they're not guaranteed next year, or the year after that in this state, because everything we've heard is it's not a question of whether, but when there will be cuts to cities and towns.

MR. ZINN ROWTHORN: And, by the way, pilot payments is a payment in lieu of taxes that a municipality would receive --

MR. REARDON: Right.

MR. ZINN ROWTHORN: -- and some compensation for having non-taxed property within its

Board.

MR. REARDON: Right. So what we did in Rhode Island with respect to property taxes was to make sure that the cities and town were made whole, and then we ramped up from there, and the idea was that, to add a huge tax burden on top of an organization that's already in trouble is a tremendous struggle, and, so, what we've asked for is breathing space to make the organization get healthy again, so that we can ramp up to full property taxes, as well as sales taxes and personal property taxes.

MR. ZINN ROWTHORN: Thank you for that. We heard a statistic, and I can't -- I'm not familiar with its source and I can't vouch for it, but there was a statistic that 49 of the 50 (coughing) health care systems are for-profit.

I'll give you the opportunity to talk about costs within your system. I think you've touched on it some tonight. Maybe, Dr. Lew, if you want to?

DR. LEW: Yeah. I'll just add to that. In the markets that we are in, we are considered the lower cost hospital systems.

As I shared earlier, you know, we serve a lot of underserved areas, but even in communities, where

they're not considered underserved, we're considered a lower cost hospital, and we see ourselves, because we think we are able to produce better outcomes, as very high value, because you have competing health systems that will cost double, and it's probably similar here, so you're paying double, but we think we can get as good or better outcomes, so I don't think we're in that 49 out of 50, Perry.

MR. ZINN ROWTHORN: I appreciate that. That's all I have, specifically. I want to, while we're gathered here, give you the opportunity. I know you're paying attention to what the public reaction is, both in our comments that we received, but in coverage in the media.

If there's anything else you want to take the opportunity to address, I think, in fairness, I'm happy to give you that.

DR. LEW: I would just like -- is this the final thing, Perry?

MR. ZINN ROWTHORN: I'm sorry to say to the folks in the back that there was a headshake in response to that question. (Multiple conversations) If you want to save wrap-up commentary for the end, you can do that. I'm all set. Thank you.

HEARING OFFICER HANSTED: Okay, now we're going to move to OHCA's questions. Mr. Lazarus?

MR. SALTON: Hold on. Are you going to let the AG finish their questions?

HEARING OFFICER HANSTED: Sure.

MR. SALTON: Okay.

MR. ZINN ROWTHORN: I may have indicated we were all set, Henry. (Laughter)

HEARING OFFICER HANSTED: We'll go back to the Attorney General's Office for more questioning.

MR. SALTON: One observation I just want to make is that folks should understand that, yesterday, we had almost six hours of hearing, of which about five hours was presentation and questions from this panel, so there were a lot of detailed questions that we covered yesterday, and some of those detailed questions we're not repeating today, so that we don't use all of the time of people here and test their patience.

I do have just a handful of things that I want to ask for. Yesterday, you spoke about, in response to the quality issues in California, that you've brought in this new corporate leadership, the four new corporate officers, and you indicated that's not the sum total, that those individuals will have staff and resources to

support their work and oversight of quality of care.

And you indicated, I think, that you're going to provide us some CVs for those individuals. We'd also like details on the supporting staff and resources budget money, whatever, that you have allocated to that part of your corporate office.

MR. ZINN ROWTHORN: Is that a late file?

MR. SALTON: As a late file.

HEARING OFFICER HANSTED: That will be Late File No. 10.

MR. SALTON: You also indicated that, after the closing, I mean after the approval and the sale is completed, there's going to be a strategic planning process for how the $75 million in capital improvements that serve the hospitals and the larger community are going to be expended over the next five years.

If you have, I assume you've done this in your other acquisitions, give us a detailed description of how that strategic health planning process will take place.

Who is involved? Who is at the table? What input you're going to get, and who exercises authority, or has a vote on how that plan will be done?

I understand that you can't tell us

specifics of where every dollar is going to be spent, but at least, right now, we'd like to know what that process is, so we understand how decisions are going to be made.

Of particular concern is that we know, from the hospital yesterday, there are substantial, millions and millions of dollars in needs on the campus that need to be addressed, so we would like to know -- I would recommend that you submit as a late file, also, a description of that process.

HEARING OFFICER HANSTED: That will be Late File No. 11.

MR. SALTON: I'm trying to go through this real quick. Number three is we'd ask ECHN if you could give us also a list of those capital improvements on the campus that you think are critical to be done in the next two to three years that would affect patient care if they're not done.

I understand there's always a desire to improve the cosmetics of a hospital to attract patients, but I think what we're really talking about are capital improvements over the next two to three years that are critical to patient care.

MR. KARL: We will do that.

HEARING OFFICER HANSTED: That will be

Late File No. 12.

MR. SALTON: Okay, so, then I want to ask just a couple more questions. One is, Prospect and the hospitals gave sort of a little bit more detailed description or variation on this side letter that says that the ECHN quality program is going to be maintained over the next two years, and it was a little bit different description than we heard last night, and we understood that you guys wanted to kind of regroup and provide us a little bit more thorough description, but I just want to make sure that -- my understanding is that the side letter, as written, still governs, and there hasn't been any change to that, based on what you said today.

MS. DORIN: Correct.

MR. SALTON: Okay, now, the other question I have is I understand there are going to be two Boards, and, first, I'd like to know, and I don't think it's been very clear, exactly, when you guys decide to create these two Boards, how are members going to be selected and placed on a local Board, and who is going to do the selection?

DR. O'NEILL: I can answer that. Our intent is to follow the current process, whereas we have

one Board that acts as a mirrored Board, because there's two hospitals, so we open the book for Rockville Hospital, open the book for Manchester Hospital, and that's how we carry this through, so it's two Boards, but it's truly one, okay, because that's what we currently have now. If not, you'd be having Board meeting after Board meeting, so we streamline that, because we've been consolidated for 20 years, so that's one.

How we would pick the new Board and what our plans were was to go out to our corporators, look at our active corporators, look at the diversity of the towns that we currently live in or they currently serve, and then make sure that we have a balance of not only cultural diversity, but diversity in their careers; someone from Highland Park Market, someone from Manchester Community College, and so on and so forth, and we would select that through our corporators, but we would be open to other ways to do it. That's how we've done it in the past, and that's how we plan on continuing doing it.

And the way Prospect sets up their Boards that I mentioned yesterday, there will be five physicians and five community members, and what I would recommend is that we would keep two of the current Board members on

the new Board, just for continuity, but bring on three brand new community member Board members, and then five physicians would come from the community, again, diverse, that would come from the IPA that currently practice in town.

MR. SALTON: Okay and, so, is that also Prospect's understanding?

MR. CROCKETT: It is.

MR. SALTON: And who makes the selection of the physicians?

MR. CROCKETT: The selection of the physicians will come from a recommendation from the CEO and then would be approved by corporate.

MR. SALTON: Okay and as far as the community members go?

MR. CROCKETT: Recommendation, once again, from the CEO, and then approved by corporate.

MR. SALTON: And what would be the criteria for corporate approval of Board members?

MR. CROCKETT: Making sure that it's diverse and well-represented and not overloaded. It's just a check and a balance, nothing, other than that. It's the same criteria that they go through their selection, as well, and just a validation that it was

diverse and it’s appropriate.

MR. KARL: If I just might add, also, when you commit, as you are probably aware, I just want this for the record, if you commit as a Board member, you’re committing not only to a monthly meeting, but you’re committing to being on call when issues arise.

You also commit to serving on several committees, so it is a significant, significant time commitment that is a volunteer time commitment, which will continue, so it isn’t easy finding Board members, simply because they spent mornings, evenings at the hospitals, at VNHSC, at Woodlake, and, so, we are very, very careful when we look at our corporators to see, again, to make sure they’re diverse, but also can afford the time to volunteer, because if you miss a meeting or two, you’re completely out of it, and, so, it’s a very focused process.

MS. MARTONE: Do the Board of Trustees also weigh in on the community members that are chosen?

DR. O'NEILL: Yes. Currently, the Board of Trustees has a Governance Committee.

MS. MARTONE: Okay.

DR. O'NEILL: Made up of trustees, and the Governance Committee goes through an iterative process

every year adding corporators, letting corporators cycle off, and then selecting trustees, and then selecting the committee Chairs and then the committee members, so it's a process.

The Governance Committee does all this work, and then sends it to the full corporate Board for approval, for review and approval.

MS. MARTONE: Okay, thank you. Sorry, Henry.

MR. SALTON: Okay, so, if you would also, then -- I appreciate your description on the record, but if you have something and produce something in writing that would be the defined process for the local Board after the acquisition, we'd like that as a late filing, also.

HEARING OFFICER HANSTED: And that will be Late File No. 13.

MR. SALTON: That's all I have. Thank you for your patience. Thanks, Perry.

MR. ZINN ROWTHORN: Good questions. All good questions. Now that definitively concludes the Office of the Attorney General's questions.

HEARING OFFICER HANSTED: Okay. I'll take a pause here. We have some questions. Mr. Lazarus?

MR. LAZARUS: Just a few questions today. We're not going to have two hours' worth of questions.

What I'm going to do is summarize a couple of the things we talked about yesterday and just make clear that the understanding is correct on both sides.

First of all, PMH said it has hired four individuals at the corporate level to address the quality of its 14 hospitals in the various states.

PMH has entered into a two-year assurance agreement, quality assurance agreement with ECHN to preserve ECHN's quality assurance programs and enhance it as it sees fit for two years, and you provided a copy of that yesterday.

Also, the local ECHN Board will have authority to revise, update and enhance the ECHN's quality program as it sees fit.

To that effect, could you just kind of clarify, when you talked about authority, does that mean it's just simply a matter of recommendation, who will the recommendation to be to, or do can they actually make any changes?

For example, they need to improve the quality of the OR and needs $50,000, is that something that they can recommend, or is it something that they can

actually move forward with? That's just an example.

MR. CROCKETT: Let me best try to answer that. The expectation that we had discussed today, this morning, actually, with ECHN is that the role of the Advisory Board is to have the responsibility for setting the goals associated with it.

In conjunction with that, the role, then, of the corporate team is to make sure that they're best practices and that it's aligned with best practices and national patient safety goals associated with that.

Underneath kind of that framework or that umbrella, my expectation is the goals that you did of an example of improving the quality in the OR would fit within that criteria, then the answer is yes.

I mean I can't definitively say yes or no on every example, but, underneath that umbrella of example, then my answer would be of course we'd want to improve the quality of the OR.

MR. LAZARUS: But they would recommend something to the executive team, to the corporation?

MS. MARTONE: They couldn't just move forward with what he's asking. The Board can't just decide to do that and move forward.

MR. CROCKETT: Say that again?

MS. MARTONE: What he's asking is if the local Board, ECHN Board, would have the authority and enforcement, say they decided something like that was needed to be done to just move forward and do that and spend the funds that they wanted to spend, so our question is what kind of other approvals would they need, if any?

MR. CROCKETT: So, to be clear, the role of the Advisory Board is to set expectations. When you think of quality, I think quality is a little bit of a misnomer, because it means 20 different things to 20 people, and it's a very broad brush associated with it.

When we think of quality, it starts off with what are the outcomes of what is trying to be achieved, and, at the end of the day, that's really the point of it, so, using your example, when we talk about the outcomes that are looking for, I'm looking specifically, then, for the outcomes that need to be achieved within the operating room, and there's various ways of how outcome can be achieved that needs to be achieved.

I don't think it's actually the appropriate role for the Board to identify the pathway to achieve it. That's the role of the actual local

management team to say we want to improve whatever standard, and there's multiple ways to actually improve it, and here's, then, our recommendation back to the Board on how we're going to achieve the outcome.

The point of it is is that it's not the process of achieving it as achieving the outcome. It's the local management team's responsibility to actually figure out how to achieve it. It may be 30,000. It may be 100. There's multiple ways to achieve it.

HEARING OFFICER HANSTED: But just a follow-up on that. So if local management decided, like in Steve's example, that the OR needed to be improved in some manner, would the local management require PMH corporate approval before they could go ahead and do that, or does the decision to take that action stay local?

MR. CROCKETT: Well there's multiple levels of -- let me start off with, once again, when we use the word quality, I think it's a very broad brush that can be misinterpreted on multiple different ways, starting off with issues associated with what's considered patient safety, life safety, CMS requirements.

We don't actually require corporate level of approval associated with that. In fact, we expect

local management to address and resolve any of the issues that are specific to patient safety, life safety, and that's a continuous level of readiness that we expect 24/7, 365, and doesn't need approval associated with that.

As it talks about the process, then, so, from that level, the answer is no.

HEARING OFFICER HANSTED: Okay, thank you.

MR. LAZARUS: That helps clarify. Thank you. PMH also said that they will make every effort for the new Chief Quality Officer to make him available for OHCA and the AG after she begins her position on April 4th.

Considering that -- just be aware that, for the administrative purposes, this docket has been consolidated with PMH's other application, where they're acquiring Greater Waterbury Health Network, so any information that's collected in either one of these records can be utilized towards any of the record.

Having said that, can PMH have the new Chief Quality Officer available to testify in the PMH/Greater Waterbury Health Network hearing that we're in the process of scheduling, which I believe we're looking to schedule on April 26th?

MS. VOLPE: I mean PMH is prepared, you know, for purposes of late file, to provide detail on the job descriptions, the CVs, you know, the qualifications for all the representatives that are going to be in the Quality Department, as well as an organizational chart, you know, and I think Henry today asked for budgeting.

I guess a question we have is what a new person on the job now, if you have their qualifications, you know their job descriptions, you know the organizational chart, you have the details that you need, somebody, who is just hired, what are you hoping to accomplish with speaking with them when they haven't been with the organization?

MR. LAZARUS: I do believe that yesterday it was made clear that this person/position was going to be the person, who was going to be responsible within the corporation for all the quality. The buck stops with that person.

MS. VOLPE: I mean I'll turn it over to Von, but, in terms of responsible for all the quality, we want the local Boards and the local management to be responsible for the quality, absolutely.

The corporate is there as a resource and to make sure that the local hospitals are implementing

best practices, do have good quality plans and programs in place, and are implementing them, so this person is going to be responsible overseeing all of that, but we want the responsibility for quality at the local level, and we want the local management and local Boards to do what they feel needs to be done for quality purposes.

MR. SALTON: I think that, if this group at the corporate level -- I mean it sounds to me from your presentations that the problems in California are a manifestation of some failures at the local level and that you've now decided to backstop the local level of quality assurance by providing this corporate level division on quality assurance.

MS. VOLPE: Correct.

MR. SALTON: And I think that it would be very useful for us to have a sense of who this Chief Quality Officer is, their judgment, her judgment, or his judgment, the way she perceives what's happened in the past, and her approach on a going-forward basis, as far as being someone on the top of a pyramid, who has 14 to 18, 19 hospitals, and how she's going to approach the job.

And even though we don't expect, I don't think anyone expects her to say I've been on the job for

two weeks and I have all the answers, her approach and her judgment, her sense of which way the compass pushes is a useful thing for us in making some determinations about the assurance of access and quality to care.

MR. ZINN ROWTHORN: And I'll just add one further point, that I think this is a discussion, whether through that way or another way, that's worth continuing, because I'll confess that, even after today and yesterday, there remains some uncertainty in my mind about where the allocation of responsibility lies between corporate and the local Board on quality issues.

We had a discussion yesterday that we didn't hear about today, which was that there was some authority delegated to the Rhode Island hospitals that looked more than advisory, but looked actually like a delegation of actual authority on quality issues, so I think we need to -- I think, collectively up here, what we're expressing to you is we need to have a very crisp understanding, to the extent possible, of how quality decisions are going to be allocated between national leadership and local leadership.

MS. VOLPE: And we understand that, Perry, and we want there to be a crisp understanding, so, in order to give that to you, I mean do you want that

detailed in writing, in terms of how the hierarchy is going to work and the organizational chart, or are you saying that your preference would be to have a person new on the job show up? I mean how can we give you that crisp understanding?

MR. ZINN ROWTHORN: I think we should order as a late-filed exhibit some further written explanation on the allocation of quality responsibility, and I'll defer to OHCA and others on the request for live testimony at the Greater Waterbury Health Network proceeding in a couple of weeks.

I think we would approach that, I think, with some understanding that the person would be new to the job, but she's going to be backstopped by a group of folks, who know the organization well, so I think it would be helpful to have both.

HEARING OFFICER HANSTED: Just for the record, the allocation of the quality responsibilities will be Late File No. 14.

MS. MARTONE: And is that going to include the chart of organization you just brought up, Michele?

MS. VOLPE: The organizational chart?

MS. MARTONE: Correct.

MS. VOLPE: Sure. Yes.

MS. MARTONE: Thank you.

MR. CROCKETT: And in regards to the question, yes, we will make her available for the Waterbury hearing.

MR. ZINN ROWTHORN: Thank you.

MR. LAZARUS: Thank you.

MR. ZINN ROWTHORN: Appreciate that.

HEARING OFFICER HANSTED: Just a follow-up on that. OHCA would request that this individual, this new hire, attend the Waterbury hearing in person whenever that is scheduled for. I believe that's the end of April.

MR. CROCKETT: Correct.

HEARING OFFICER HANSTED: Thank you.

MS. VOLPE: Thank you.

MR. LAZARUS: Can you please provide us as a late file copies of any and all deficiencies received by PMH-owned hospitals in Rhode Island for the past three years? And please include any plans of correction related to those deficiencies.

HEARING OFFICER HANSTED: That will be Late File No. 15.

MS. VOLPE: Just a point of clarification on that late file. I mean they haven't owned the

hospitals for three years, so, for Rhode Island, for the time period for which Prospect has owned --

MR. LAZARUS: Two years would be fine, then, yes.

MS. VOLPE: Okay.

MR. LAZARUS: So I'm just confirming that, yesterday, we had discussed the Quality Evaluation Team, and they were going to provide documentation I believe on either reports that were developed or generated by that committee or any of the materials they had reviewed.

I believe we had talked about that yesterday. Would you be handing those in as late files?

MS. VOLPE: I think there was a late file number assigned to those.

HEARING OFFICER HANSTED: There is.

MR. LAZARUS: Okay. Okay, so, just clarifying.

MS. VOLPE: And the last one you requested, Mr. Lazarus, that would be Late File 15?

HEARING OFFICER HANSTED: That's correct.

MR. LAZARUS: Thank you. Yesterday, we had discussed the eastern region quality I believe it was initiative, or team, or something. It's our understanding from yesterday that it's not something

that's been developed yet, but will get developed over time. Do you have a time frame for that development? Is it over the two-year period that you're looking, or is it something relatively soon after the closing --

MS. DORIN: I'd defer to Von as the President of the eastern region.

HEARING OFFICER HANSTED: Remember the microphone, please.

MS. VOLPE: Can you repeat the question for Mr. Crockett?

MR. LAZARUS: Yesterday, we were discussing the eastern region either quality initiative or team that's been put together, and we understand that it's not put together yet, but will be, so I'm trying to get an idea of what time frame would that be for that to occur, and, also, what's the goal and vision for that team or initiative?

MR. CROCKETT: Let me start off with the goal and the vision first, and then we'll talk about implementation.

The goal and the vision is that, as we work with the four individuals, starting off with the Chief Quality Officer, of identifying what resources and best practice is to be shared, as well as policies to be

looked at, and it's really more at an umbrella level.

It's a resource for the local team here to have someone to call upon and to look at a specific care practice, specific policy and understanding, so the point of the east coast regional team is to be an on-site ability within hours in a, you know, in a same time zone conversation to carry out the corporate initiatives, so they're not doing anything independently. It's underneath a corporate umbrella of the oversight and check and a balance.

From a time perspective, I anticipate that, at the time of the close, we will have a regional Director of Quality at the time of the closure, and there will be support staff shortly thereafter, within two to three months, but I would expect to have the leadership position filled.

MR. KARL: If I can just, if you don't mind, just add to that? What we're currently doing now, you heard from Linda Quirici yesterday, our quality person.

What we're doing right now, what we found is extremely helpful, is we're going to be moving onto the same formatted score cards, so when you're looking at them, you're looking at identical score cards, as it

relates to outcomes, whether it's hospital-acquired, so on and so forth.

And what we learned from Rhode Island and what they learned from us is there's certain things that we present better, and there are certain visual scorecards that they present better, and we're hoping to do the same thing when Waterbury comes up, because, currently at CHA, the Connecticut Hospital Association, as you know, there are certain quality items, quality measures that we share between hospitals, but we don't like sharing that type of information with competitors.

Being that we're not going to be competitors, this is going to be of great help for us to see why are you doing so well with falls in the institution? How come your falls are down so far? What they heard from us is that we have a Red Slipper Program. If the patient has red slippers on, that means that they're at a fall risk, and, so, that's how we're going to play this going forward.

MR. LAZARUS: Okay, thank you. Just to clarify, when you talk about eastern region, you mean it's northeast, so it will be Pennsylvania, New Jersey, Rhode Island, Connecticut, or just specific to Connecticut and Rhode Island?

MR. CROCKETT: It would include actually New Jersey and Pennsylvania, so our east coast will be true east coast.

MR. LAZARUS: Okay. I was just confirming. And, just confirming, that yesterday you had said regarding the community benefit that PMH on the record said that they would fund ECHN's community benefit at the current levels after the acquisitions?

MR. CROCKETT: That was correct.

MR. LAZARUS: Okay and as regarding the capital projects plan, can you talk about some timeline for that one after the closing? I know there was some discussion, but I wasn't clear on that.

MR. SPEES: Sorry. Can you repeat the question?

MR. LAZARUS: Sure. The capital project plan that's to be developed after the closing, what's the time frame for that?

MR. SPEES: Well, I mean, that's really the responsibility of local management to implement, but we would expect that the process would begin very quickly after closing, and we'll work with the local leadership team on timing of completion process-wise.

MR. KARL: Steve, in speaking with my

strategic planner and already having conversations about how we would roll this out, I would say, you know, after closing, it would be about a six-month period for us to develop a comprehensive plan that would look out, again, that would look out.

It's very difficult looking forward in health care, as you all know, because of the changes, but the strategic plan would probably look out two to three years, and then, again, it would be updated on a regular basis, as necessary.

MR. LAZARUS: Okay, thank you.

MR. ZINN ROWTHORN: I believe the testimony was that the anticipation is that the money, the $75 million, would be spent or committed within five years.

MR. LAZARUS: Carmen?

MS. CARMEN COTTO: Hi. Carmen Cotto, OHCA staff. I have some questions also related to the capital projects, but more at the local level, so my question will be addressed to you.

In the application on page 3224, indicated that they intended to secure a loan for $5 million to be spent exclusively on behavioral health expansion at Rockville General Hospital as a capital project.

Was the loan secured, and, if so, will the project be completed by closing to increase the commitment amount?

MR. KARL: The answer is, yes, the loan was secured. It falls under, obviously, our Behavioral Health Department. It's an eating disorder center. That's the only one in the State of Connecticut that would specialize in bulimia and anorexia.

And, yes, the loan was secured, and the construction, I can walk you over to Rockville, is currently underway, and we expect it to be completed in the late June -- first phase, meaning 20 beds, will open in June, and then an additional 10 beds will open in September, so it's a two-phased approach, and it has no affect on the purchase price.

MS. COTTO: But on the capital commitment, it does? No? Just confirming.

MR. SPEES: Well that's actually a complicated answer that I can try. We've agreed to assume the loan, the $5 million loan, but the expectation is the loan is currently secured by cash collateral, and, so, if ECHN at closing has the cash collateral available and delivers it to Prospect, then it has no impact on the capital commitment.

If, in fact, ECHN needs the cash to satisfy its obligations or for other reasons and doesn't deliver the cash collateral, the net difference would actually reduce the capital commitment. In essence, we would have pre-funded the capital commitment.

MS. COTTO: So, as you indicated, the capital project is for a 30-bed eating disorder inpatient unit for adolescents and adults. That was stated on our page 2149, and, at page 2173, it was stated that Rockville General Hospital has no other behavioral health inpatient service.

How was that service determined to be a need, as compared to a general psychiatric inpatient unit?

MR. KARL: Approximately, and, Kim, I'd have to go back to OHCA, but approximately five years ago, we entered into a partnership, filed a Certificate of Need, and received approval to open Walden Behavioral Care East, which was an outpatient eating disorder office or center in one of our South Windsor buildings.

We had always expected this to grow to a point, because of the significant need that's out in the community relating to these types of eating disorders.

What has happened in that five-year period

since they've moved in is they've expanded three times at the outpatient unit, and they are at capacity up at their two inpatient units in Massachusetts, so, as a result, they will manage the department. It will be under our license, and it will be our staff.

They will hire the physicians, but it will be our staff taking care of these patients.

MS. COTTO: One more question related to this issue. What inpatient behavioral health capacity does ECHN currently have, and what relationships do both of its hospitals currently have with community-based organizations to maintain continuity of care/follow-up care regarding behavioral health and substance abuse?

MR. KARL: Okay, so, ECHN has an extensive behavioral care division. We have an inpatient adult and adolescent locked unit at Manchester Memorial Hospital, 32 beds, 35 beds. I stand corrected.

We also have an extensive partial day program, whereas those patients that graduate from the inpatient unit go into partial day, until they are, then, released back into the community, back into society.

We also have an extensive ambulatory program at 150 North Main Street. We have over 60,000 visits that we see at that outpatient center.

We also have, believe it or not, we have a day school in the basement of Manchester Memorial Hospital, and let me define what the day school is.

It's those individuals, those sixth graders to seniors in high school, that have behavioral issues that they're unable to function at an everyday high school.

They are taught, as they would be in the school systems, but they are taught at our organization in the basement, not because for any other reason than that's where the space is, but they are taught, and they graduate. They actually graduate from that program, graduate with a degree, a high school degree.

Those patients, those students, most of them are very active in our behavioral health programs, outpatient programs, so that's the behavioral health piece.

And, again, we just recently opened an 11-station locked unit in our emergency department at Manchester, because of the overflow of behavioral health patients. We're in a crisis, as we all know, with behavioral health. We just opened, and, again, it's about $1.2 million behavioral health unit in our ED, to hold those patients there while they are waiting for the

beds that are up on the unit to open up, and that was done for patient safety, and, as important, it was done for employee safety.

You can imagine, after midnight, holding patients in the emergency department while you're getting MIs and car accidents coming in, and then you have behavioral health patients not being properly cared for, so that was done.

MS. MARTONE: And can I just ask? Were any of these initiatives or programs implemented because of the recommendations of the community health needs assessment?

MR. KARL: Absolutely.

MS. MARTONE: Okay.

MR. KARL: Absolutely.

MS. MARTONE: All right.

MR. KARL: And if I just may add, Kim, because I think Carmen asked the second question, about whether it's opiates, or drug abuse, or substance, I'm sorry, substance abuse, yes, we, in fact, there's a lot going on, but we also have volunteer programs at both hospitals, as it relates to substance abuse, whether it's alcohol, Alcoholics Anonymous, or Narcotics Anonymous, and we are in the process of, at this point in time, Dr.

Carroll is in the back, he can speak better, that we're going to be doing hopefully a pilot program with the Town of Manchester, and then we'd like to involve the Town of Rockville, as it relates to the heroin epidemic, mostly because of the Fentanyl issue that's out there currently, so, you know, so, that all, obviously, you don't need a community needs assessment to recognize the problem we're having with the opiates.

As you know, Connecticut has made the decision, and correct me if I'm wrong, Dr. Carroll, that we will no longer, at least in our hospital, be prescribing opiates for any more than seven days, and what that has created is a significant issue associated with heroin abuse and Fentanyl abuse, because these patients are addicted, and they can no longer get their opiates, so now they are going after that high, which is heroin, so what we've created, by not providing additional scripts, because our physicians now review the statewide panel for each patient that gets a prescription, they go onto a panel, so we will not be doing refills, which has now created our whole other issue, which we are now going to begin dealing with at this point in time. I hope that answered your question.

MS. COTTO: My next question is in

reference to the purchase price. I've seen through your presentations that you're only referring to the $105 million. Through the application process, there were two scenarios that were introduced to us.

There were two scenarios submitted to us, and you're only introducing one. Can you explain that?

MR. SPEES: Yeah. At the time of the original submission, there was the possibility that ECHN was going to get an additional loan, which was the genesis of the alternatives. With the passage of time, it's now -- that additional loan is off the table, so it actually makes it much less complicated, so we can deal with just the $105 million scenario.

MR. KARL: Carmen, if I can answer that, also?

MS. COTTO: Sure.

MR. KARL: We felt we may need a bridge, because of the Connecticut state tax, so we were worried about the operating cash, so we're going to go out, borrow $10 million to carry us until this approval went in place, but when we went to banks, they weren't all that friendly about giving up some money, $10 million, so it came back off the table again.

MS. COTTO: Okay. Page 3325, you stated

that all the joint ventures, in terms of ECHN, were to be transferred to PMH as part of the asset purchase were on schedule for transfer. Could you provide an update on the issue associated with the joint venture, venture transfers?

MR. KARL: I'll have Dennis McConville.

MS. COTTO: Yes. Okay.

MR. McCONVILLE: So, yes, we have 12 joint venture companies, and we have obtained consents in hand for all, but the four joint ventures related to real estate that are under ECHN Enterprises, and those are in process, and we should have those prior to closing. I don't see any issue from our partners.

MS. COTTO: I'm going to ask some questions related to the assumption of debt and the pension obligations. Your pre-filed testimony indicated that, and you also mentioned it today, that nearly $75 million of ECHN's outstanding debt will be paid through this transaction, which will free up $9 million of debt service annually for ECHN.

My question on the $9 million is, first of all, how did you estimate that $9 million was the basis for that? What was the basis for estimating the $9 million?

MR. SPEES: That information was given to me by Mike Veillette, the hospital CFO.

MS. COTTO: Is he available?

MR. VEILLETTE: Okay, so, Carmen, the $9 million is a function of the long-term debt, primarily the tax-exempt debt that we've had through CHFA and some more recent direct placements with TD Bank, the energy loan with Santander, there are a couple of other loans, as well as the annual payment on the line of credit, because we've been paying down on the line of credit with TD Bank, so we've been paying that down at about $1.8 million last year and this year, so that $9 million is 1.8 related to the line of credit, 7.2 million of annual debt service related to all the other debt.

The remaining annual debt is capitalized lease payments, and that will be assumed by Prospect.

MS. COTTO: Which is? What's the total now on that?

MR. VEILLETTE: The total number on that is in the neighborhood of around -- it's around $3 million.

MS. COTTO: Now that $9 million you expect to be free up of $9 million annually. For what extended period of time are you expecting that after closing? The

first year? Two years?

MR. VEILLETTE: That's an average over in like the next three years.

MS. COTTO: Three years? Okay. Now there's been different amounts presented to us related to the debt. In some testimony, I heard 75, through your presentation, it was 78, and the audited financial statements indicated a different amount.

I just need you to confirm what is the actual amount for the outstanding debt.

MR. VEILLETTE: If you go to our audited financial statement for 9/30/15, the total number between what I would call traditional debt and then look at the debt related to capitalized lease obligations and then the line of credit, that total number is around $90 million, if you don't take into account the assets, whose use is limited, so payments that we're making as we're going through the year, so you'll record debt on a gross basis and liabilities, but then you will also be making payments on a monthly basis, and it will be going into what we call assets, whose use is limited, and then you also have a handful of asset accounts, debt service reserve funds, and, so, that is netted.

Those funds would be part of the pay down

towards the overall gross debt.

MS. COTTO: Which I did see the audited financial statements, and I saw, the total amount that I saw was close to 90, as you explained.

MR. VEILLETTE: Right.

MS. COTTO: Now, based on that, could you please -- what we're asking you to do is to reconcile those numbers with the revised Table 8 that was requested yesterday by the Attorney General's Office.

MR. VEILLETTE: So we're doing that on a monthly basis, and, so, yeah, Gary and I spoke, and you requested it yesterday.

MS. COTTO: Yes. He requested a late file. I want to make sure that it's reconciled with information --

MR. VEILLETTE: We have both of those pieces of debt, if you will, broken out, so the long-term debt, which gets paid down, is net of those other assets I referred to, debt service reserve funds, assets, whose use is limited, and then the capitalized lease obligations are in the assumed liability cluster on the net proceed schedule.

MS. COTTO: Okay. I have a question on the funding pension obligations. Please explain PMH's

plan for funding the $64 million pension obligation. When will that happen? Right after closing? How will that be taking place, the funding of the $64 million on the pension obligations?

MR. SPEES: Yeah, so, the funding on the pension plan will continue post-closing, just as it does now, and there are a host of very complicated IRS formulas that deal with how and when the pension obligations have to be satisfied, and it depends on the return on the investments that have been mentioned, as well as IRS guidelines for what level of funding currently exists.

MS. COTTO: Okay. Now will you be able to do the same for the pension, the $64 million calculated cash flow associated with that, like you did with debt? Did you come up with the $9 million that you'll free up to use for capital projects? Could you provide us with a calculation that shows the financial benefit coming out of the $64 million cash flow and the cash flow that will come out?

MR. SPEES: I don't know if I can answer that question completely, as I'm not entirely sure if the liability, the unfunded liability is still carried on the post-closing balance sheet of ECHN, or if it has now

moved over to the corporate balance sheet of PMH, so it's difficult for me to say how that's going to be funded going forward, and part of that is because the current asset portfolio, as it is today, is not what it would be traditionally if it were under an entity that was let's just say not in our status right now.

So, in other words, what I mean by that is our portfolio is entirely in fixed income, and that's to preserve any more growing of that pension liability in our balance sheet and not exposing it to potential swings in the equity market.

I would suspect that, post-closing, that portfolio allocation would be re-examined, re-assessed, and be converted to a more traditional portfolio, so that you could benefit from a more diverse portfolio in the long run and close that pension funding gap, and, hopefully, there will be some improvement in interest rates sometime in the near future, because that is the most profound impact on the current status of that funding gap.

We have estimates currently, based on our current portfolio, on what that funding requirement is, but for me to be able to say that there's a -- those numbers are concrete, so to speak, I don't have the

ability to do that, because I don't know what's coming, in terms of interest rate changes. I don't know what's coming, in terms of potential future funding relief.

We've already gone through four measures of pension funding relief just since 2009. It's possible there could be even more funding relief in the future that could change the outlook of pension funding requirements, cash funding requirements for the years 2017 through 2021.

I can tell you that, if you look at that right now, at this point in time, those numbers are projected to be somewhere in the neighborhood of $17 to $19 million when you get out four or five years.

I doubt that that would be the case in the future, once that pension portfolio were reallocated in a more traditional model.

That's a long answer, but that's what I can tell you about potential pension funding.

MS. COTTO: I guess what I'm trying to get at is what are you getting out of this benefit of PMH relieving you of the $64 million?

MR. SPEES: Their ability to be able to help us achieve a greater EBITDA cash flow performance, so, like I said, I'm not sure if that funding requirement

comes from that cash flow or if it comes from another source, but EBITDA performance would be the reason for being able to absorb that potential funding requirement.

MS. COTTO: And you cannot project that for the next --

MR. SPEES: I can only tell you what I have today. I'm sorry. I can only tell you what I have today, based on a projection on what our current model is, based on our current portfolio.

MS. COTTO: Could you submit that information to us?

MR. SPEES: We could submit that.

MS. COTTO: Yes, please.

HEARING OFFICER HANSTED: That will be Late File No. 16.

MS. COTTO: I have a question for Mr. Crockett. In your pre-filed testimony, you indicated that one of the financial benefits for ECHN related to this proposal would be that revenue collection will be streamlined through PMH's system.

Could you please describe this revenue collection process and elaborate how it will be beneficial to both Manchester Hospital and Rockville Hospital?

MS. VOLPE: I'm sorry. Can you --

MS. COTTO: The page?

MS. VOLPE: Yeah, the page. I just want to make sure that was in Mr. Crockett's testimony.

MS. COTTO: Okay, sure.

MS. VOLPE: As opposed to maybe Mr. Spees.

MS. COTTO: Sure.

MS. VOLPE: But we'll want to get your question answered, so go ahead and ask it.

MS. COTTO: It's page 3359.

MR. CROCKETT: So, from a revenue streamline collection process, part of our efforts of looking to assist ECHN, there's many things we're hoping to bring to the table, but one of them is the revenue cycle process.

For us, the revenue cycle process is actually multi-faceted. It actually starts at the time of admission. We look at, from an admission perspective, in making sure that, as they're registering the patient, they're collecting the right information, in order for us to actually bill and collect correctly.

Part of that is going through and looking at the various -- if they don't have insurance currently, we go through an insurance verification process, where we

look to see if they actually -- if they're currently not eligible, if they're currently not on Medicaid, that they're eligible for Medicaid and they're uninsured, then we will hook them up with an eligibility worker to get them insured through the Medicaid program for the uninsured population.

For those that do have insurance, we're making sure that the information that is collected is correct and verified and validated, so that, as we go through the billing process, that they can collect from a charging perspective.

We go through in making sure that the coding is accurate and that it's correct, they're using the right codes most often. Bills are either not paid or denied, because people are using incorrect codes, or the process for coding is incorrect, and, so, we will have a team go through the validation, in terms of the coding and making sure that that's accurate.

From a care perspective, it's not uncommon for bills to be denied associated with eligibility and making sure that, if they do have insurance and that the care is being provided, that they don't do a pre-kind of a verification of insurance, or that it's just not being approved through whatever managed care company insurance

that they have, and, so, we'll have a process to making sure that, as the patients are in the hospital and they're receiving the care that they're having, that it's being validated and verified, and, really, it's keeping the managed care companies up-to-date, in terms of what's happening.

On the back end of the process, from a billing perspective, we do work with some vendors. We always look to look for local vendors associated with it. We usually look for either internally or externally the expertise associated with making sure that the billing is done timely, people don't wait six months to get a hospital bill.

And I'm not saying any of these things are applicable to ECHN. These are more national practices that we look to go through and improve.

We won't be actually applying anything that I've just said. Part of our process is we will go through and do an evaluation with what they currently have and really look in areas where we can improve upon what they're currently doing.

MS. COTTO: Okay, thank you. Would you like to add anything?

MR. ALEMAN: The only thing that I, and

Von was very thorough, the only thing I would emphasize this is one area that we see as a core competency of ours. We work very closely with all of our facilities, and one item that I would want to emphasize is the revenue cycle business office resides at the facility, so that's not something that we do centralized or from another location. It resides in the facilities, and we believe it operates most effectively at the facilities.

We bring our best practices, our data-driven tools for analytics to help them implement the policies and practices, and make sure that we're consistent, you know, company-wide on how we do it.

MS. COTTO: Okay, thank you. I just have a couple of follow-up questions from what we talked about yesterday.

MR. ALEMAN: Sure.

MS. COTTO: And the first one is related to, when we talk about PMH's ability to continue funding ECHN in the future, as you still continue to acquire hospitals that are in poor financial health, including the New Jersey hospital, as you just acquired, you indicated that you'll still be able to and, also, that New Jersey is actually doing better now.

MR. ALEMAN: That's correct.

MS. COTTO: Could you elaborate on that statement? What are the financial gains?

MR. ALEMAN: Yeah, sure. It's been a while, but when we first started being formally engaged with East Orange General Hospital, it was February of 2014, and I believe, if my memory serves me, we signed the APA June of 2014, and, so, we were in the regulatory review process for well over a year and a half in New Jersey.

Now when we signed the APA with East Orange General Hospital, they were losing approximately about a million/two a month, and we worked very closely with the management team on some of the items that we've touched base on, such as revenue cycle and the business office, what Von went through in great detail.

We worked very closely with them to just improve those practices to ultimately ensure that the facility is collecting what they have ultimately earned from operations, and, actually, over that period of time, bridge that gap from the number that I highlighted to basically break even up to the point of close, and then we looked for further improvement, so, as we take a look at and we focus on, as you stated, financially-troubled facilities, we worked to improve processes, so all the

way up to the point of the close of the transaction and beyond, that, certainly, the target is that they're all break even, hopefully, even doing better, or, if they had positive EBITDA, that we've even worked with them to improve that performance.

That is basically kind of our strategy. I think we've been fairly effective with that. I think we have that same track record of turnaround in performance at CharterCARE, certainly, East Orange, so that's part of what I reference when I say, you know, I'm fairly confident, as we move forward here, that none of those acquisitions are going to put a drag on our operating cash flow or free cash flow.

I feel very confident in our projections for not only following through on our commitments to ECHN, but every acquisition that we work through, and in none of our cash projections do I embed what the projected cash projections are from that target, so, in other words, in none of my cash projections for the commitments for ECHN do I have in there any cash that may be generated from ECHN.

In other words, they're not paying for their own commitments. It's the level of conservatism I think that I have in putting together those projections.

MS. COTTO: Okay, so, the Pennsylvania acquisition, what is the status of that?

MR. SPEES: So the Pennsylvania acquisition is in the regulatory process. It's different than in this state. There is no Certificate of Need, so it's with the Attorney General's process currently, and we expect that -- we're actually scheduling the public hearing I think toward the end of this month, as well, and we anticipate that that process, if it runs as expected, will conclude around the same time as this process.

MS. COTTO: Okay. Let's see.

MR. SPEES: I'm sorry. The end of April. That would be tomorrow, wouldn't it? I'm reasonably sure the hearing is not tomorrow.

MS. COTTO: You testified that the $75 million capital expenditures is not necessarily for just brick and mortar, capital projects, but how much of that 75 do you expect to actually invest on bricks and mortar, because now we do have information that you submitted that indicated that ECHN has $40 million dollars already identified as capital projects that it needs to address, so will it be accurate to say that, out of the 75, at least 40 million will be set aside for those that they

actually need?

MR. SPEES: I'll elaborate. I think that we appreciate the nature of the question, but I'll answer it in the same way I answered it previously, is that that will be a product of the capital planning and strategic planning process that we're going through, and, really, to try to do it any other way would sub-optimize the result, and, so, it really needs to be a comprehensive analysis of all of the needs.

There are limitations on capital, and, so, there's competition for capital, and unless it's done thoughtfully and thoroughly and with a big picture in mind, then it won't produce the best result.

MR. ALEMAN: Yeah, and I'll just elaborate. I think it's been addressed a few times. We look at those. We're here to invest in ECHN and invest in Connecticut.

We believe in our model, we believe in the state, we believe in the system, and we'll work very closely with management on the best use of that capital to grow the system.

I go back to our Nix acquisition in San Antonio, Texas, that we acquired that from a for-profit, and we actually had no capital commitment as part of that

transaction, but any capital commitment that we have we look at at as a floor, and even though with the Nix in San Antonio we had no capital commitment in first two years, we invested over $20 million in the building out of the ER and almost the doubling of the behavioral health facilities in infrastructure within the core building, building out other volume streams into the hospital, I use that as an example of the investment that we made into San Antonio, Texas to grow that system, that is our intent here, also, being able to break that down at this point into specific, whether it's bricks or mortar.

The underlying theme is it's to grow the system. It's to grow ECHN. It's to grow services and allocate the capital to the best means to achieve that end.

MS. COTTO: Okay, thank you. My question now is related to the most recent data submitted to OHCA, quarterly data that was submitted within the past week, and I have some questions on the difference between what was submitted these past few days and what was originally submitted through completeness, and this for ECHN.

The submission, the regional submission indicated, for cash flow operations, indicated that, for

fiscal year-to-date, 2014, ECHN generated $305 million.

The submission that we received past week, past few days, yesterday, it has a difference of $200 million from that amount. I need someone to explain to me why is that so different?

MR. VEILLETTE: So, Carmen, in all candor, the quality review or quality control on those reports, they just were shared with me it may have been two days ago, and I found some things in there that didn't appear to be appropriate, correct, and I asked for my team to take another look at it, and we found some formula issues in those reports, so I would rather not try to guess, as to what changed, because I haven't compared the previous.

I just knew, when I looked at a few of them, I knew there was an error, such as in days, days and accounts receivable, for example, where you had Manchester had an individual number, you had Rockville had an individual number, and then the combined number didn't make any sense, and then I asked a few other questions, and then I compared it to the audited financial statements, and I asked that we recheck every number, so everything was re-checked, and there was some other -- I was assured that everything had been corrected, but, quite honestly, I can't tell you, because

I haven't done a full reconciliation of what was submitted originally and what was submitted after, so it would be my preference to respond to that as part of the late filing.

MS. COTTO: The late file, yes. Yes, at the late file.

HEARING OFFICER HANSTED: This will be No. 17.

MS. COTTO: Okay. I think we're almost done here. I just have one more request or two more requests and we can go.

HEARING OFFICER HANSTED: Well, to clarify, she'll be finished.

MS. COTTO: For me. He's the one that will decide that. Sorry. I apologize.

We talked about the $100 million available funding.

MR. ALEMAN: Yes.

MS. COTTO: And you indicated that it's now in excess of 60, not 110?

MR. ALEMAN: That's correct.

MS. COTTO: Okay and, also, that the cash flow, the free cash flow has increased 210 to 15?

MR. ALEMAN: Correct.

MS. COTTO: Through the process, we asked, when we first heard about the 110 million in the free cash flow, we asked for supporting documentation for those numbers. Now they have changed. Could you please revise your form that you sent us, the schedule that you sent us? And that is Schedule R of the December 11, 2015 completeness responses.

MR. ALEMAN: Yes.

MS. COTTO: Could you revise it, just to make sure that it's updated with the new correct amount?

MR. ALEMAN: Yes.

HEARING OFFICER HANSTED: That will be Late File No. 18.

MS. COTTO: And then we have requested a table that includes EBITDA, working capital, stockholder's equity for three earlier prior acquisitions, Nix, Roger Williams Medical Center and Our Lady of Fatima. That's on page 3400.

I just have a question on one of your footnotes. The footnote indicated that, it says that the net benefit of government supplemental payments in 2014 was higher than average, while the net benefit of government supplemental payments in 2015 was below average.

From an operational perspective, the performance of Nix was slightly better in 2015 and ’14. Could you elaborate on those payments, supplemental payments?

MR. ALEMAN: Sure. And this is related to the Nix in San Antonio.

MS. COTTO: Yes.

MR. ALEMAN: Their supplemental program, the 1115 waiver, has a few different pieces related to it, an uncompensated care component and a DSRIP component, of which they receive revenue.

The revenue component has been fairly stable year-over-year. What happened in the 2014 period, there is an unrelated expense, but it’s part of kind of the program to be, and, for them, it’s called the SOS(phonetic) expense, where they actually -- there are costs associated with savings that they kind of carve out of the system with some other systems that they work with.

Bottom line is those costs, in general, run about roughly about a million dollars a month. They were significantly lower in 2014.

And it’s just by virtue of the costs associated with their partners and, basically, what they

have to fund, so that one particular year the costs were about $6 million lower than they normally are.

Once again, roughly, about a million dollars a month or 12 million a year. If my memory serves me, there was about $6 million in that given year, so that's what really drove the increased performance on a net basis in 2014 for the Nix.

MS. COTTO: Okay. That explanation leads to your EBITDA?

MR. ALEMAN: Correct.

MS. COTTO: Because your EBITDA for Nix in 2014 actually decreased between 2014 and 2015.

MR. ALEMAN: It went down from '14 to '15.

MS. COTTO: Okay.

MR. ALEMAN: Right. '14 was good, and then it went down to '15.

MS. COTTO: Okay, now, could you provide a table with numbers, the same numbers for EBITDA, working capital and stockholder's equity, related to New Jersey as it is right now?

MR. ALEMAN: Sure. Update that for New Jersey.

MS. COTTO: Yeah, for New Jersey. Include one line that includes New Jersey.

MR. ALEMAN: Yes.

HEARING OFFICER HANSTED: That will be Late File No. 19.

MS. COTTO: And that's it. Thank you.

HEARING OFFICER HANSTED: All set?

MS. COTTO: Yes.

HEARING OFFICER HANSTED: Do you have anything? Okay. I just want to take a few more minutes of your time and go back to the quality issue.

As you're aware, quality has been an issue in this hearing, last night's hearing. It's been an issue with us, and it's been an issue with the community members.

It's also one of OHCA's criteria that we need to look at in deciding on this application, and I just want to -- I don't want to go into many specifics, but I just want to highlight some of the quality issues that we discussed.

Specifically, in April 2014, there was an immediate jeopardy found at Southern California Hospital at Hollywood. In August 2014, the surveyors found that immediate jeopardy still existed at that hospital.

In September of 2015, Southern California Hospital at Hollywood, Culver City and Hollywood, were

found to be in immediate jeopardy.

In December 2015, immediate jeopardy was found at Southern California Hospital at Hollywood. In November of 2015, deficiencies were found at Los Angeles Community Hospital. And, in February of 2016, a resurvey of Los Angeles Community Hospital found that the hospital failed to address the November 2015 audit deficiencies.

And we've heard testimony about the quality agreement that's in place for two years, and we've heard other testimony about some of the steps you took to rectify the deficiencies and the immediate jeopardy.

I'd like you to take this opportunity to expand upon with more specificity what actions you're taking, not only at the local level, but at the corporate level.

As Perry stated earlier today, there's some confusion with respect to the allocation between corporate and the local level, in terms of who is responsible for quality assurance, so if you can take this opportunity to address us and the community members, I'd appreciate that.

MR. CROCKETT: You know, I think that the way to start the conversation is that, you know, quality

starts and ends on a day-to-day basis, and what you do for quality is interesting in what happened yesterday, but every single day quality needs to occur.

From our perspective, that's something that we strive for and we'll continue to strive for in each of the facilities.

With that, it has always been and will continue to be important for this organization, I mean Prospect and ECHN, that the ability of a local team to be able to resolve issues in real time fashion.

It's not uncommon, when you talk about quality, that it starts with not just a patient, but it also encompasses a physician and what his needs are, in order to provide safe care, as well as complaints from a patient.

From those three areas, it's important for us to make sure that the local team is empowered and remains empowered to resolve issues quickly and timely and appropriately.

As we talk through this, that has always been our mandate, and it continues to be our mandate, and we look to hold our local teams accountable in real time and not have to go through a corporate approval process or off-site approval associated with that.

That being said, obviously, it didn't prevent certain issues arising within the hospitals that you mentioned, and, as we went through and looked at what was causing some of those issues, in particular, one of the common threads that we've seen was a lack or a turnover at the executive level, as well as some at the nurse level.

Some of the challenges we have specifically to this specific market, so this is not an issue that's within all of our California, I mean without all of our Prospect hospitals, but within this specific market, is that Los Angeles County has 73 hospitals just within the county, and, with that, our hospitals are safety net providers working as community-based hospitals in underserved areas, and we are next door neighbors to very large, well-respected, well-regarded organizations.

And, so, with that being said, the competition within our marketplace at an executive level, as well as at a nurse level, is tremendous, and, so, it's not uncommon for the large academic tertiary centers, in order to get their nurses, they will go after the nurses that are already employed and have the ability to do so.

And, so, our challenge within our marketplace, and it continues to be a challenge and

something that we have now spent additional time and energy to focus on, is maintaining consistent leadership within a very, very competitive market, as well as nurse leadership.

And, so, with that, we have multiple initiatives to address those issues, including proper career pathways for nurses, so they feel that they don't have to leave our organization, specialty training for the nurses. We're looking for a mentoring program, a preceptorship program, and ongoing support.

Nursing, at the end of the day, when you talk about quality, it's not 100 percent of the quality, but it's usually a major part of it.

That's not the only cause, obviously, associated with it. So going forward, a couple of different things. One of them is that, as we mentioned previously in our presentation, is, if the organizations do have a lack of resource or expertise, that it's important for us on a go-forward basis to be able to provide leadership and that expertise to backfill as a backstop to organizations that may have some of those concerns, so that's number one.

And we look to have kind of a consistent, high-level leadership expertise that can assist when the

organizations do have turnover, or gaps, or a knowledge deficit associated with it.

On the turnover piece, we have engaged with our corporate HR Department, with our local facility HR Departments, to put in new additional programs to address some of the issues associated with the turnover and retention of the staff.

We believe and we're fully committed to it, in terms of putting the resources that are needed to address it in going forward.

Let's be clear. CMS doesn't enjoy coming out, and they've said the same thing. They have a high expectation, and they told us personally that being on a rollercoaster ride and multiple visits is not what they do, nor what they expect to do, and it's very disruptive in our organization.

And, so, we're committed to resolving the issues, and with some of the things I had outlined beforehand, as well, I hope that you would see that, as well.

DR. LEW: Kevin, let me just add --

HEARING OFFICER HANSTED: Sure.

DR. LEW: -- to what Von said, because I think he probably answered most of your question, but I

think you wanted to hear like --

HEARING OFFICER HANSTED: No, go ahead. Add what you'd like to add.

DR. LEW: Yeah. Quality is going to be of the highest priority, okay, for this company. The silver lining in going through what we're going through is it points out areas that we need to improve, whether it be to build out a corporate infrastructure, bringing the Chief Quality Officer, and a lot more bandwidth in the area of quality, but it's also in other areas related to clinical and medical, and I'm one example, being in the corporate office.

So I can tell you that it is a priority, and it is a commitment at the very highest level, and, so, you know, Von can tell you the details of what's happening at the level of each local hospital, but I can assure you, at the corporate level, it has our attention daily and will continue to.

I'd love to be here in front of you at some point or share with you how we turned it around and how it's something that we're very, very proud of.

HEARING OFFICER HANSTED: Okay, thank you. Does anyone else want to add anything? Okay. All right, that concludes our -- did you want to add something,

Doctor? I see you reaching for the microphone.

DR. O'NEILL: I have a summary, summary comment at the end.

HEARING OFFICER HANSTED: Okay. That concludes our question and answer session. At this point, if counsel or their clients want to give a closing statement, they're welcome to do so.

DR. O'NEILL: Well I just wanted to say, on behalf of ECHN, I wanted to thank all of you again for the opportunity to provide support for this transaction.

We appreciate your insightful questions, because they've served as guideposts for us along the process, and we certainly appreciate your attention to our application.

I'd also like to thank members of the community, who have spoken at both hearings, because it's only through their support that we exist.

Approving this transaction will allow the physicians, nurses and hospitals of eastern Connecticut to continue to provide the services that we think our citizens need and deserve, so, on behalf of ECHN, I'd like to thank you again.

DR. LEW: And, also, on behalf of Prospect Medical Holdings, I also want to thank the communities of

Manchester and Rockville.

To hear the questions and the passion of the people of the community it's very reassuring to us on how the people of the community care, and that's important to us, to come in to regions and communities, where the people really do care about the health care delivery system and how they're going to be impacted.

I also want to thank the AG's Office, Gary and Henry and Perry and Kevin and OHCA, Kim and Steven and Carmen, for your time.

I hope you've learned more about Prospect as a company and, also importantly, learned a little bit more about the senior management team.

We are good citizens, even though we are from California, with the exception of Tom, but we do care about what we're doing as a company.

And you've heard that we operate hospitals, and we operate medical groups, and we've got this unique delivery model, and we also feel like this is a very good fit with ECHN, and I hope that you're convinced that we are, both parties, very committed to making this work in the long-term for both communities.

And I ask that you do approve this conversion application, and just know that we -- that you

approve it in a way that you know that we are a very innovative and an entrepreneurial company, and that we're not your normal company, and I mean that in a good way.

And I understand that you have assets to protect, but you heard Steve share that we use our commitment as a floor, and that we haven't closed hospitals, and we don't close services. We're a growth company. We add services, and we add programs.

And I know that OHCA has a responsibility to assure access, but I hope you understand that access is part of our model, and a community needs type of evaluation is part of the solution, but these things are all very important for us to function and to be successful.

And if this can go through, I am very confident that not only will two hospitals be saved, but, in fact, they will be far better, in terms of services and quality, and we will build a delivery system that can be a choice and another option for the state, and that we can be seen as transformative in a delivery system that Connecticut can be very proud of.

And we're in this for the long-term, okay? This is not something that we're investing this kind of money to, quote, "flip it," okay?

We are in this for the long-term. We've all been in health care all of our careers, so I ask that you just take that, but, again, thank you very much for this opportunity.

MR. ZINN ROWTHORN: Thank you, Doctor, and thank all of you. This is a long and detailed and maybe it might seem laborious process, but it's an important process, and I know we've benefitted from having this exchange today.

I'll close with where I started this morning, which is to emphasize our gratitude to the members of the community, who were with us today and shared their views today and last night, so we appreciate it, and thank you very much.

HEARING OFFICER HANSTED: Thank you, all. Before we leave, before we leave, one moment. I just want to clarify for those folks that may have come in late, is there anyone here that would like to give public comment that did not have an opportunity to do so?

Okay. Thank you, all, again, and, with that, I will adjourn this hearing.

(Whereupon, the hearing adjourned at 7:32 p.m.)

**Subject:** ECHN Late File # 19 Request for an Extension to File

Dear Kevin, Gary, Kim and Steve:

ECHN and PMH are getting ready to submit all of the Late Files that were requested as a result of the ECHN hearings. Late File #19 is the request for an updated Exhibit W showing EBITA, Working Capital and Stockholders' Equity of PMH Hospitals (Prior to and Post Acquisition) inclusive of New Jersey acquisition. Because the East Orange New Jersey Hospital was purchased out of bankruptcy, PMH is still awaiting some final financial information in order to be able to update the requested exhibit. Therefore, this schedule will not be ready tomorrow for filing along with all of the other Late Files. May we please have a one-week extension from today, until next Tuesday, April 26, to produce Late File #19? As for timing of production, this is a new acquisition and PMH is still gathering all of the necessary financial information in order to produce the updated Exhibit W.
Thank you for your attention to this request.

***OHCA Docket Number: 15-32016-486***
***Attorney General Docket Number: 15-486-01***

Dear Mr. Hawes and Mr. Lazarus:

On behalf of Eastern Connecticut Health Network, Inc. ("***ECHN***") and Prospect Medical Holdings, Inc. ("***PMH***" and, together with ECHN, the "***Applicants***"), we thank you for your time at the hearings on March 29-30, 2016, and careful consideration of this important proposal.

Enclosed with this letter are the various late file exhibits requested of the Applicants by the Office of Health Care Access and the Office of the Attorney General. As with previous filings, one (1) hard copy and one (1) electronic copy of this submission have been provided to each Office.

Please note that Hearing Officer Kevin Hansted granted an extension to submit Late File #19, Revised/Updated Exhibit W – EBITA, Working Capital and Stockholders' Equity of PMH Hospitals (Prior to and Post Acquisition), until April 26, 2016.

If you have any questions or need anything further, please feel free to contact Rebecca Matthews at (203) 498-4502 or Melinda Agsten at (203) 498-4326. Thank you for your assistance in this matter.

Sincerely,

1. **Timeline of ECHN's Review of PMH's Immediate Jeopardy Citations/Deficiencies in California**

Please see attached.

**ECHN Review of PMH Immediate Jeopardy Issues**

**Timeline February 1, 2016 through March 28, 2016**

**Disclosure of Issues to ECHN:**

- **February 1, 2016**: PMH representatives contact ECHN to advise ECHN that PMH had recently received additional information on Immediate Jeopardy citations at two of its California Hospitals and to provide some history and facts around this development. ECHN is also informed at the same time that PMH has asked the OAG and OHCA for an extension to file its responses to the January 12, 2016 completeness questions in the Waterbury/PMH CON proceeding in order to provide a detailed response regarding notices of CMS deficiencies and Immediate Jeopardy findings that PMH has received relating to certain of its California hospitals.

- **February 16-17, 2016**: PMH files a response to the Waterbury CON completeness questions with a summary that describes how its California regulatory issues arose and outlines the manner in which the issues are being remedied. PMH provides a copy of the filing to ECHN representatives and starts providing additional information around the latest developments. PMH explains that the initially identified deficiencies have been resolved, but discloses additional regulatory issues and provides excerpts from the following CMS Forms 2567:

    - A report detailing the results of a survey completed on September 25, 2015 (the "**September 25 Survey**") at two hospitals, Southern California Hospital at Hollywood and Culver City; and

    - A report detailing the results of a survey completed on November 10, 2015 (the "**November 10 Survey**") at Los Angeles Community Hospital.

- **February 17, 2016**: As a follow-up to the **November 10 Survey** CMS begins a re-survey at Los Angeles Community Hospital on February 15, 2016 which it completes on February 17, 2016 (the "**February 17 Survey**"). During the exit conference, CMS notifies PMH that there are no new Immediate Jeopardy findings but that there will be some deficiency findings relating to infection control and other matters. The formal results of the survey are provided on March 24, 2016 (see below).

- **February 18, 2016**: PMH SVP Corporate Development Von Crockett conducts a conference call with Peter Karl and other ECHN representatives Dennis McConville and Joyce Tichy in which he describes the outstanding deficiencies being addressed by PMH. Other PMH participants on the call are Thomas Reardon and Frank Saidara. Von Crockett provides background to the recent deficiency findings:

    - **Los Angeles Community Hospital**. Von Crockett reports that this review process began when surveyors responded to a patient's complaint of physician misconduct that PMH had self-reported and as to which it had instituted corrective actions. Surveyors found that PMH had not fully implemented its corrective actions, and as a result issued an Immediate Jeopardy finding. PMH then took further corrective action by suspending the physician and putting additional precautions into place. However, in a subsequent

follow-up survey (the **November 10 Survey**) surveyors identified other issues. As a result, CMS issued a 90 day termination letter for the three hospitals under the Los Angeles Community Hospital license (Los Angeles Community, Norwalk and Bellflower). The letter notified PMH that the Medicare provider agreement would be terminated April 13, 2016 unless deficiencies were satisfactorily corrected. Credible documentation evidencing correction of the issues and compliance with Medicare conditions was to be submitted by January 25, 2016. PMH submitted timely its corrective action plan and was resurveyed (the **February 17 Survey**) and was awaiting further regulatory response.

- **Hollywood/Culver City**: Von Crockett reports that this started with a fire on the roof at Culver City during construction to remediate an aging facility (previously in bankruptcy) in January 2015, in which an air handler pushed smoke into the building which required an evacuation. This led to a series of follow-up regulatory surveys, including the **September 25 Survey,** which found prior issues abated but then identified other issues and issued Immediate Jeopardies. Subsequently CMS conducted a 10-day "Validation Survey" in the third week of December (the "**December 22 Survey**"). The written survey report had not yet been received at the time of the conference call, although PMH had been informed orally that it would receive a 90 day letter notifying it of potential termination as a Medicare participating hospital.

Von Crockett describes various corrective actions taken which include replacement of the local administrative team including the CEO, CNO and Director of Quality Management and the resignation of the Chief of Staff and appointment of a new Chief of Staff; the hiring of consultant Greely and Company and the law firm Hooper Lundy & Bookman to assist in PMH's responses, and the appointment of a new corporate administrative team; i.e., Chief Quality Officer, Chief Clinical Officer, Vice President of Regulatory Affairs and Patient Safety, and the recruitment of a Chief Corporate Nursing Officer.

- **February 19, 2016**: ECHN's CEO Peter Karl meets with Board Chair Dr. O'Neill and Vice Chair Joy Dorin regarding PMH's disclosure of regulatory issues in California. It is determined that this information should be disclosed to the Board at its next meeting, and that a Board-level process should be established to look into the matter further.

- **February 23, 2016**: CMS issues a 90 day termination letter in connection with the **December 22 Survey** for the three hospitals under the Southern California Hospital license. The letter notifies PMH that the Medicare provider agreement will be terminated May 24, 2016 unless deficiencies are satisfactorily corrected; credible documentation evidencing correction of the issues and compliance with Medicare conditions are required to be submitted by March 4, 2016 (later extended to March 22, 2016).

**ECHN Board Outlines a Deliberative Process and Begins Work:**

- **February 24, 2016**: At a meeting of ECHN's Board of Trustees, Board Chair Dr. O'Neill advises the Board that PMH regulatory issues have come to light and that more information and investigation are needed to determine their scope and any impact on the ECHN/PMH transaction. Dr. O'Neill appoints Board Vice Chair Joy Dorin and Performance Assessment and Quality Committee Chair Dr. Michele Conlon to perform an in-depth review, with support from

Linda Quirici, ECHN Vice President for Quality and Safety, and her appropriate designees in the ECHN Quality Department (together, the "**Quality Evaluation Team**").

- **February 24, 2016**: PMH opens its data room containing regulatory surveys to ECHN. ECHN team begins reviewing the materials.

- **February 25, 2016**: PMH receives two written reports bearing survey dates December 18, 2016 and December 22, 2016 which together comprise the **December 22 Survey**, and releases them to ECHN.

- **February 29, 2016**: PMH representative Von Crockett leads a conference call with the ECHN **Quality Evaluation Team** and other representatives of ECHN. Mr. Crockett outlines the issues in the three hospitals that led to regulatory findings. ECHN's **Quality Evaluation Team** requests additional detail which is furnished. The parties go over next steps regarding exchange of further information, the review process to be conducted, and timeline.

- **March 2, 2016**: ECHN and PMH agree that a brief postponement of the public hearings scheduled for March 15-16 may be appropriate in order that ECHN may look further into the PMH regulatory matters.

- **March 4, 2016**: Members of the ECHN **Quality Evaluation Team** visit PMH's two Rhode Island hospitals, Our Lady of Fatima and Roger Williams, to learn about their quality programs, the experience since PMH acquisition, and the manner in which those programs have been allowed to progress under PMH.

- **March 4, 2016**: ECHN Transaction Committee meets to review the status of information regarding the Immediate Jeopardies and to consider next steps.

- **March 7, 2016**: The ECHN **Quality Evaluation Team** meets on current status and next steps for reviewing PMH regulatory issues in order to make recommendations to the full Board regarding PMH as an appropriate purchaser. ECHN proposes to PMH an agreement pursuant to which PMH will commit to support of ECHN's current quality programs (the "**Quality Commitment Letter**"), which PMH agrees to consider.

- **March 11, 2016**: ECHN Transaction Committee meets to discuss information learned to date including results of **Quality Evaluation Team** trip to Rhode Island, reviews proposed **Quality Commitment Letter**, and outlines further steps/deliverables.

- **March 18, 2016**: PMH provides draft Plan of Correction with summary for **December 22 Survey** to ECHN for review, along with quality performance indicators for its owned hospitals. PMH provides comments to the proposed **Quality Commitment Letter**.

- **March 21, 2016**: Peter Karl and members of the ECHN **Quality Evaluation Team** participate in a conference call with Von Crockett and a number of other PMH representatives to discuss the corrective actions and ECHN's follow-up questions resulting from its review of the **December 22 Survey** response.

- **March 22, 2016**: The ECHN **Quality Evaluation Team** reports back to the Transaction Committee the results of the review of PMH regulatory documents and the March 21, 2016 phone conference with PMH representatives. The Transaction Committee reviews PMH's comments to the **Quality Commitment Letter** and discusses responsive comments for ECHN. The Transaction Committee recommends that the Board approve proposal to proceed with the **Quality Commitment Letter** and to continue with the transaction with PMH.

**ECHN Board Resolves to Proceed with the Transaction and Quality Commitment Letter:**

- **March 23, 2016**: At a Special Meeting the Board receives a written report from the **Quality Evaluation Team** on the visit to PMH's Rhode Island hospitals and an oral report on PMH's regulatory issues. The Board considers the Transaction Committee recommendation and after deliberation resolves to proceed with the **Quality Commitment Letter** and the PMH transaction.

- **March 24, 2016:** PMH notifies ECHN that it has received the written CMS Forms 2567 from the **February 17 Survey** at Los Angeles Community Hospital, and provides a copy to ECHN. (The CMS cover letter is dated March 23, 2016). As CMS had indicated during the exit conference, there are no new Immediate Jeopardy findings, but there are additional findings relating to nursing services and infection control. The new plan of correction is due April 4, 2016 and the proposed date for terminating the Medicare provider agreement unless corrective actions are taken is extended from April 13, 2016 to June 21, 2016.

- **March 28, 2016: Quality Commitment Letter** finalized and executed by ECHN and PMH.

**2. Quality Improvement Plans Adopted at Los Angeles Community Hospital and Southern California Hospital at Culver City.**

Attached hereto as Exhibit 2(a) is the Quality and Performance Improvement Plan for Los Angeles Community Hospital.

Attached hereto as Exhibit 2(b) is the Quality and Performance Improvement Plan for Southern California Hospital at Culver City.

**RATIONALE FOR INDICATOR SELECTION:**

1. **Patient Safety Issue**
2. **Survey Finding**
3. **High Risk Process**
4. **High Volume Process**
5. **Problem Prone**
6. **Patient Satisfaction Issue**
7. **Required Measure**

**There may be more than one rationale for a single indicator. Survey findings should be first priority.**

Exhibit 2(b)

## Quality Assessment and Performance Improvement Indicators for 2016 (revised as of 3/23/2016)

***Note:*** *Indicators are to be selected from this list. All indicators are not meant to be monitored at all times*

| No | Name | Definition | Target* | Accountability | Prioritization Criteria** | Reporting | Comment |
|---|---|---|---|---|---|---|---|
| | | | **Significant Adverse Occurrences** | | | | |
| 1 | Sentinel Event (Never Events) | Event leading to death or significant impairment (per Sentinel Event Policy) includes Near Misses (may be reported under significant events on scorecard) | 0% | Risk Manager | XX, R, P, C | Quality Steering Committee (QSC) Medical Executive Committee (MEC) Board of Trustees (Board) [Monthly until resolution] | Each sentinel event is reported. The root cause analysis and prevention interventions are also reported. |
| 2 | Event Reporting Frequency (RCA) | Number of events reported of the following types: Medication-Related; Other significant | 0% | Risk Manager | XX, R, P | QSC, MEC, BOARD [Monthly] | The focus will be to increase reporting of issues |
| 3 | Regulatory Citations | Issues identified in this category are monitored until sustained improvement is shown for a minimum of 3 months | TBD | TBD | TBD | TBD | TBD |
| | | | **Patient Safety** | | | | |
| 4 | Inpatient Falls per 1000 patient days | **Numerator**: Number of inpatient falls reported during the month. **Denominator**: number of inpatient days per month X 1000. | 0.36 | Risk Manager | XX, R, P, V | QSC, MEC, BOARD [Monthly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 5 | Patient falls leading to injury requiring treatment | Number and brief description of the circumstances surrounding any inpatient or outpatient fall that required medical treatment | N/A | Risk Manager | XX, R, P, V | QSC, MEC, BOARD As they occur - monthly | Quality Steering Committee will oversee the effectiveness of corrective actions |
| | | | **Infection Prevention** | | | | |
| 6 | MDRO Infection Rate | **Numerator:** Number of cases (HAI) **Denominator**: 1000 pt days | TBD | Infection Control Practitioner | R, P, C. | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 7 | Surgical Site HAI rate | **Numerator**: Number SSI **Denominator:** per 1000 clean cases (targeted/specific cases only) | TBD | Infection Control Practitioner | R, C, P, S | QSC, MEC, BOARD [Quarterly] | Surgical procedures for review should be rotated to capture the spectrum of clinical services and operative areas |
| 8 | Ventilator Associated Event Rate | **Numerator:** Number of ventilator associated event infections **Denominator**: Number of ventilator patient days X 1000 | TBD | Infection Control Practitioner | R, P, C. | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |

* Target: N/A = Not Applicable to This Indicator; TBD = Applicable but the target has not been determined ("To Be Determined")

** Prioritization Criteria: XX = Required by External Authorities; R = High Risk; V = High Volume; P = Problem Prone; C = Clinical Excellence; E = Operational Efficiency; S = Patient, Employee and Physician Satisfaction; H = Employee Retention / Recruitment

**Monthly statistical calculations unless otherwise stated**

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 9 | Central Line/Catheter Related Sepsis Rate | **Numerator:** Number of CLABSI **Denominator:** Number of line insertion patient days X 1000 | TBD | Infection Control Practitioner | R, P, C | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 10 | MRSA Rate | **Numerator:** Number of cases (HAI) **Denominator:** 1000 pt days ❖ | TBD | Infection Control Practitioner | R, P, C, S | QSC, MEC, BOARD Quality Steering Committee [Monthly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 11 | C. difficile Rate | **Numerator:** Number of cases **Denominator:** 1000 pt days ❖ | TBD | Infection Control Practitioner | R, P, C, S | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 12 | Rate of Compliance CDC Hand Hygiene Requirements | **Numerator**: Number of observations when the caregiver performed hand hygiene per CDC guidelines. **Denominator**: number of observations (opportunities) | 100% | Infection Control Practitioner | XX, R, P, V | At least ten observations per month QSC, MEC, BOARD and Infection Control [Quarterly] | Observations should be rotated to cover all settings and all disciplines |
| **Organ / Tissue Donation** | | | | | | | |
| 13 | Notification of OPO of imminent patient death/actual death | **Numerator:**# of OPO contacts within time frames per policy **Denominator:** # of deaths per month | 75% | Risk Manager | XX, E | QSC, BOARD [Quarterly | Quality Steering Committee will oversee the effectiveness of corrective actions |
| **Environment of Care** | | | | | | | |
| 14 | Emergency Generator Testing 12 tests required per year with intervals of not less than 20 days and not more than 40 days | **Numerator:** # of tests conducted at required load **Denominator:** # of tests required | TBD | Plant Operations | XX, R, V,P, C,E,S,H | Environment of Care Committee Quality QSC, Board [Quarterly] | EOC Committee will oversee the effectiveness of corrective actions |
| 15 | Preventative Maintenance on High Risk Equipment | **Numerator:** # of PM equipment checks per program **Denominator:** # of PM equipment observations conducted | 95% | Biomed | R, V,P, C,E,S,H | Environment of Care Committee Quality QSC, Board [Quarterly] | EOC Committee will oversee the effectiveness of corrective actions |
| 16 | Emergency Management Activation | 2 per year | TBD | Plant Operations | XX, R, V,P, C,E,S,H | Environment of Care Committee Quality QSC, Board [Quarterly] | EOC Committee will oversee the effectiveness of corrective actions |

* Target: N/A = Not Applicable to This Indicator; TBD = Applicable but the target has not been determined ("To Be Determined")
** Prioritization Criteria: XX = Required by External Authorities; R = High Risk; V = High Volume; P = Problem Prone; C = Clinical Excellence; E = Operational Efficiency; S = Patient, Employee and Physician Satisfaction; H = Employee Retention / Recruitment

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 17 | Emergency Management Employee Education | **Numerator:** # of employees correctly describing their role in the event of an internal/external disaster **Denominator:** # of employees interviewed | >90% | Plant Operations | R, V,P, C,E,S,H | Environment of Care Committee Quality QSC, Board [Quarterly] | EOC Committee will oversee the effectiveness of corrective actions |
| 18 | Fire Drills | **Numerator:** 1 fire drill per quarter per shift conducted **Denominator:** 12 | 100% | Plant Operations | XX, R, V,P, E,S,H | Environment of Care Committee Quality QSC, Board [Quarterly] | EOC Committee will oversee the effectiveness of corrective actions |
| 19 | Staff knowledge of fire plan | **Numerator:** # of staff articulating fire plan components correctly **Denominator:** # of staff queried | >90% | Plant Operations | R, V,P, E,S,H | Environment of Care Committee Quality QSC, Board [Quarterly] | EOC Committee will oversee the effectiveness of corrective actions |
| 20 | Preventative Maintenance on Life Safety System | **Numerator:** # of PM on Fire System **Denominator:** 4 total Fire System PM Conducted | <95% | Plant Operations | R, V,P, E,S,H | Environment of Care Committee Quality QSC, Board [Quarterly] | EOC Committee will oversee the effectiveness of corrective actions |
| 21 | Life Safety Assessment Conducted for all construction/ renovation projects | **Numerator:** # of ILSM assessments conducted **Denominator:** # of construction/renovation projects initiated | 100% | Plant Operations | XX, R, V,P, E,S,H | Environment of Care Committee Quality QSC, Board [Quarterly] | EOC Committee will oversee the effectiveness of corrective actions |
| | **Patient Complaints / Grievances** | | | | | | |
| 22 | Timely Patient Grievance Response Rate | **Numerator:** # of patient grievances responded to w/7 days **Denominator:** # of grievances reviewed | TBD | Patient Advocate | R, P, S | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| | **Clinical Excellence / Operational Quality** | | | | | | |
| | **CMS Core Measures** | | | | | | |
| 23 | Compliance with Core Measures See core measure descriptions | Indicator sets for AMI, Pneumonia, CHF with related core measure criteria will be reviewed on a quarterly basis (see attached) ❖ | TJC Reported mean | Quality Director | XX, V, C, E | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| | **HCAHPS** | | | | | | |
| 24a | Patient Satisfaction, overall level of care, Inpatient | Percent of patients indicating positive/slightly positive score❖ | Corp mean | Quality Director | V,S,H | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |

* Target: N/A = Not Applicable to This Indicator; TBD = Applicable but the target has not been determined ("To Be Determined")
** Prioritization Criteria: XX = Required by External Authorities; R = High Risk; V = High Volume; P = Problem Prone; C = Clinical Excellence; E = Operational Efficiency; S = Patient, Employee and Physician Satisfaction; H = Employee Retention / Recruitment

**Monthly statistical calculations unless otherwise stated**

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 24b | Patient Satisfaction, overall level of care, ED | Percent of patients indicating positive/slightly positive score❖ | Corp mean | Quality Director | V,S,H | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 24c | Patient Satisfaction, overall level of care, OP | Percent of patients indicating positive/slightly positive score❖ | Corp mean | Quality Director | V,S,H | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| | **HBIPS** | | | | | | |
| 25a | HBIPS-1 | Admission screening for violence risk, substance use, psychological trauma history and patient strengths completed | Corp mean | Director BHU | V,S,H | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 25b | HBIPS-2 | Hours of physical restraint use | Corp mean | Director BHU | V,S,H | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 25c | HBIPS-3 | Hours of seclusion use | Corp mean | Director BHU | V,S,H | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 25d | HBIPS-4 | Patients discharged on multiple anti-psychotropic medications | Corp mean | Director BHU | V,S,H | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 25e | HBIPS-5 | Patients discharged on multiple anti-psychotropic medications with appropriate justification | Corp mean | Director BHU | V,S,H | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 25f | HBIPS-6 | Post-discharge continuing care plan created | Corp mean | Director BHU | V,S,H | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 25g | HBIPS-7 | Post discharge continuing care plan transmitted to next level of care provider on discharge | Corp mean | Director BHU | V,S,H | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| | **Contract Services** | | | | | | |
| 26 | Evaluation of Contracted Services | **Numerator:** Number of Contracted Services Evaluated **Denominator:** Total number of Contracted Services | Corp mean | COO | XX | PICC, Board (Annually) | Performance Improvement Coordinating Council will oversee the effectiveness of corrective actions |
| 27 | **Effectiveness of Contracted Services** | **Numerator:** # of services with positive evaluation **Denominator:** # of contract services | 95% | COO | XX | PICC, Board (Annually) | Performance Improvement Coordinating Council will oversee the effectiveness of corrective actions |
| | **Surgery/GI Lab** | | | | | | |
| 28 | Sedation Outcome (Use of Reversals) | **Numerator:** Number of sedation cases with reversal agents used **Denominator:** Total sedation procedures performed | 0% | GI Laboratory and Sedation Team Director | R, P, C | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions Will refer physician identified trends to Peer Review Committee for review , determination and action as necessary |

* Target: N/A = Not Applicable to This Indicator; TBD = Applicable but the target has not been determined ("To Be Determined")
** Prioritization Criteria: XX = Required by External Authorities; R = High Risk; V = High Volume; P = Problem Prone; C = Clinical Excellence; E = Operational Efficiency; S = Patient, Employee and Physician Satisfaction; H = Employee Retention / Recruitment

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 29 | Unplanned Returns to the OR | **Numerator:** Number of unplanned patient returns to OR for surgical procedure during same admission as initial procedure **Denominator: Number:** Number of surgical **cases** performed❖ | TBD | Surgery Director | R, P, C, S | QSC,, MEC, BOARD Peer Review Committee [Monthly] | Quality Steering Committee will refer physician identified trends to Peer Review Committee for review , determination and action as necessary* |
| 30 | PI Project Status Temp and Humidity in the OR suites | **Numerator:** # of times temp and Humidity out of range **Denominator:** # of times temp and humid measured | 100% | Surgery Director | R, P, V,C, E, | QSC, MEC, BOARD [Monthly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 31 | Sterilization of Surgical Instruments PI Project | **Numerator #** of instrument trays with no evidence of discoloration post sterilization/**Denominator#** of instrument trays inspected | 100% | Surgery Director | R, P, V,C, E, | QSC, MEC, BOARD [Monthly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 32 | ALOS in PACU | Average Length of Time in Minutes | TBD | Surgery Director | V, C, E, S | QSC, MEC, BOARD [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| **Health Outcomes / Complications –1** | | | | | | | |
| 33 | Inpatient Mortality Rate | **Numerator:** Number of inpatient deaths **Denominator:** Number of patient days per month X 1000 | TBD | Quality Director | R, V, P, C, S | QSC, MEC, BOARD Peer Review Committee [Monthly] | Quality Steering Committee will refer physician identified trends to Peer Review Committee for review, determination and action as necessary*** |
| 34 | Postoperative Mortality Rate (new) | **Numerator:** Number of mortalities post surgical procedure **Denominator:** Total number of surgical **cases** performed | TBD | Quality Director | R, V, P, C, S | QSC, MEC, BOARD Peer Review Committee [Monthly] | Quality Steering Committee will refer physician identified trends to Peer Review Committee for review, determination and action as necessary |
| **Health Outcomes / Emergency Department** | | | | | | | |
| 35 | Emergency Department LWBS rate | **Numerator:** Number of patients leaving ED WBS **Denominator:** Number of ED patient visits X 1000 | <2% | ED Manager | R, V, P, C, S | QSC, BOARD Quality Steering Committee [Quarterly] | Quality Steering Committee will oversee the effectiveness of corrective actions |
| 36 | Door to Physician Time | Average Monthly Time in Minutes | TBD | ED Manager | R, V, P, C, E | QSC, MEC, BOARD Quality Steering Committee [Monthly] | Quality Steering Committee will oversee the effectiveness of corrective actions |

## DEBBIE BERRY, RN, MSN, LHRM, CPHQ, CPPS, CWCN, CCN

[redacted]

## PROFESSIONAL EXPERIENCE

4/2015 – Present

**Vice President of Quality and Patient Safety**
*Gulf Coast Division (GCD) of HCA, Houston, TX*

- Work directly under the GCD Chief Medical Officer to provide oversight for clinical operations and excellence; quality assurance; performance improvement; patient safety, risk prevention and management; infection prevention and control; and medical staff operations for a 13 hospital division.
- Collaborate with the DCMO to build structure and processes to drive improvement in quality, patient safety and clinical excellence outcomes for the GCD by creating and co-chairing a Quality and Patient Safety Steering Council with subcommittees on Medication Safety, Infectious Disease Preparedness, CVAT, Hospital Acquired Conditions/Infection Prevention, and Clinical Excellence.
- Collaborated with the DCMO to build the quality and patient safety strategic plan for 2016 – 2018 that will maximize Value Based Purchasing and other pay-for-performance opportunities; as well as, lead to improved clinical and quality outcomes.
- Provide oversight for Quality and Clinical Operations data mining and analysis for division and facility opportunities.
- Developed and implemented performance improvement strategies and tactics leading to a 25% reduction in catheter associated urinary tract infections, 30% decrease in time to pain management for long bone fractures and a 32% improvement in Outpatient Stroke measures.
- Designed and implemented a Leapfrog "Getting to A" initiative that led to a division average score of "C" to a division average score of "B" and includes a division-wide IRR and validation process.
- Collaborate with the CMO and Performance Improvement team to drive an 11% improvement in sepsis mortality through improving sepsis bundle

compliance by 60%, an 11% improvement in blood utilization, and sustained improvements in 4 of 5 Cardiovascular PCI indicators.

4/2013 - 4/2015 **Assistant Vice President of Quality and Clinical Operations**
*West Florida Division (WFD) of HCA, TAMPA, FL*

- Work directly under the WFD VP of Quality and Clinical Operations to provide oversight for clinical operations and excellence; quality assurance; performance improvement; patient safety, risk prevention and management; infection prevention and control; and medical staff operations for a 16 hospital division.
- Provide oversight for many of the day to day operations of the Quality and Clinical Operations Department
- Provide oversight to all regulatory and accreditation activities in the 16 hospitals in the WFD of HCA.
- Created a Sentinel Event Webinar preparation program that has led to 100% acceptance of plans of correction and successful completion of measures of success for the past four years.
- Completed due diligence from a quality, patient safety, infection prevention, nursing operations and medical staff perspective for 4 hospitals under consideration for acquisition.
- Provided on-site facilitation for 5 newly acquired facilities to successfully transition to corporate standards and achieve 100% Joint Commission and CMS accreditations within 120 days of acquisition.
- Responsible for successful credentialing and privileging of 100% of the Medical Staff in new WFD facilities.
- Created a multilevel tracking system that enables a 30 day transition of Medical Staff from a closing facility to the closest HCA facility.
- Co-designed and implemented performance improvement "Key Elements" strategies leading to a 60% reduction in hospital acquired conditions in 4 years.
- Participated in the design of the WFD centralized claims management process.
- Co-designed and implemented a Core Measures Playbook II with gap analysis and tool kit leading to 13 of 16 WFD hospitals awarded Top Performers on Key Quality Indicators© by the Joint Commission for 2013.
- Assumed the Severe Sepsis project management in March 2012 leading to a decrease mortality rate from 42% to 32% and ALOS from 12 days to 9.5 days.
- Co-designed a Dependent Healthcare Provider Scope of Service and evaluation program which has been adopted by HCA Corporate.
- Created and provide oversight for the Quality and Patient Safety Leadership Orientation Program.

- Provide oversight for Quality and Clinical Operations data analysis and data presentation.

2/2011 – 4/2013 **Director of Regulatory and Accreditation Programs**
*West Florida Division of HCA, Tampa, FL*

- Worked directly under the WFD VP of Quality and Clinical Operations; serves as the Division expert on regulation, accreditation, clinical practice and risk prevention and management.
- Provided oversight to all regulatory and accreditation activities in the 16 hospitals in the WFD of HCA.
- Designed a QRS follow-up program for continuous survey readiness which has led to a decrease in TJC RFIs in the WFD.
- Co-designed a TJC Sentinel Event webinar process which has led to 100% acceptance of WFD hospital action plans and attainment of 100% Measures of Success within the required 4 months.
- Co-designed and implemented performance improvement "Key Elements" strategies leading to a 60% reduction in hospital acquired conditions and never events.
- Co-designed and implemented a Core Measures Playbook leading to 12 of 15 WFD hospitals awarded Top Performers on Key Quality Indicators© by the Joint Commission for 2012.
- Assumed the Severe Sepsis project management in March 2012 leading to a decrease mortality rate from 42% to 35% and ALOS from 12 days to 11 days in one year.

8/2009 – 2/2011 **Vice President of Quality, Risk Management and Infection Control**
*Northside Hospital, HCA St. Petersburg, FL*

- Provided oversight of all Quality, Performance Improvement, Risk Management, and Infection Control activities for Northside Hospital.
- During tenure significantly improved all Core Measures to the 90th percentile and increased HCAHPS composite score by 4%.
- Redesigned Medical Staff peer review, ongoing professional practice evaluation (OPPE) and focused professional practice evaluation (FPPE) program leading to improved oversight of physician and LIP practice.
- Achieved 90% measure of success compliance in 6 months on all QRS identified opportunities from May 2010 QRS survey.
- Facilitated all Root Cause Analysis and Failure Mode Effects Analysis activities and ensured 100% compliance with designed plans of correction.

- Responsible for presentation and facilitation of analysis of quality and performance improvement data in the Quality and Patient Safety Committee, Medical Executive Committee and Board of Trustees.

10/2007 – 6/2009 **Assistant Vice President of Clinical Practice**
Washington Adventist Hospital, Takoma Park, MD

- Provided clinical operation oversight for ED, Critical Care, Medical-Surgical, Telemetry, Women's Services, Surgical Services, and Pharmacy Services.
- Assumed the Interim Chief Nurse Executive role during the 6 month search process.
- Provided leadership for Case Management, Hospitalist Program, and Intensivist Program – decreased hospital LOS by 4% despite a 10% increase in Case Mix Index
- Facilitated the design, implementation and monitoring of a new Neurovascular Surgical Service Line and Stroke Program.
- Designed and implemented the Professional Practice Education Program (PPEP) and other professional practice programs led to a 20% increase in recruitment and retention of nurses
- Redesigned and provided oversight to the Montgomery County Latino Health Care Initiative Nurse-in-Training Program – wrote and was awarded a $259,000 NSPI grant to support the management of the program for four years.
- Improved customer satisfaction scores by 15 % in key clinical areas
- Assisted in a Pharmacy redesign program leading to a 55% decrease in medication errors reaching the bedside.
- Facilitated the design and implemented a Rapid Medical Evaluation process in the ED which decreased patients leaving without treatment by 30% in the first three months.

5/2005 – 10/2007 **Internal Consultant/Corporate Manager, Resource Management and Performance Improvement Department**
*MedStar Health, Lutherville, MD (Seven hospital Healthcare System)*

- MedStar Visiting Nurses Association (VNA) Error Reduction Project
- Decreased service batch errors by 50% in 6 months
- Decreased Medicare Revenue held by fatal billing errors from $2,687,806 to $1,248,860 in 6 months.

- Served as a clinical consultant to Corporate Supply Chain. Designed a 3- year corporate bed fleet replacement program leading to $400,000 in contract savings.
- Facilitator for System-wide Performance Improvement Task Forces that all led to decrease in mortality, morbidity, LOS and 30-day readmission rates including initiatives in Surviving Sepsis Campaign, pressure ulcer prevention, glycemic control, heart failure, and culture of safety.
- Redesign Projects leading to improved efficiency, improved revenue capture, decrease in length of stay and decreased wait times and improved customer satisfaction
    - Franklin Square Hospital Center– Preadmission Testing
    - Georgetown University Hospital – Case Management Department, Wound Center and Ankle and Foot Center
    - Good Samaritan Hospital – Heart Care Unit and Patient Flow initiative.

10/1999 – 5/2005 **Clinical Nurse and Case Management Specialist, Medicine Service Line**
*Franklin Square Hospital, MedStar Health, Baltimore, MD*

- Served as a clinical consultant to Corporate Supply Chain. Designed a 3- year corporate bed fleet replacement program leading to $400,000 in contract savings.
- Partnered with physicians to design and implement protocols, guidelines and outcomes measurement for multiple disease entities.
- Provided supervision for all educators and clinical specialists in the Medicine Service Line.
- Planned, implemented and sustained multiple evidence-based, performance improvement programs across the Medicine Service Line.
- Designed and implemented care coordination rounds on all units resulting in a 10% decrease in length of stay.
- Implemented the DRG Assurance Program maximizing coding for complexity of care leading to a 20% increase in CMI in one year.
- Achievements:
    - Delmarva Medicare Excellence Award for three areas of responsibility: CHF, MI, and Pneumonia
    - Solucient 100 recognition for Heart Failure, MI and Pneumonia
    - Achieved recognition in US News & World Report Top 100 Hospitals for cardiology and endocrinology.

4/1998 – **Clinical Liaison Nurse, Corporate Materials Management**

10/1999 *MedStar Health, Baltimore, MD*

- Served as clinical expert and liaison for all corporate contracts
- Served as medical and OR product consensus builder leading to over $1.5 million in systems savings in 18 months.
- Coordinated all new product implementations across the system.

3/1985 – 4/1998 **Nurse Director/Nurse Educator/Staff Nurse/Home Care Case Manager**
*Church Hospital, MedStar Health, Baltimore, MD*

- Provided Critical Care, Home Care and Medical-Surgical clinical practice, management and education
- Served as member and chairperson on multiple quality, patient safety and performance improvement committees.

9/1988 – 5/2009 **Adjunct Faculty Villa Julie College and Community College of Baltimore County**
*Baltimore, MD*

10/1981 – 3/1985 **Cardiac Rehabilitation Nurse/ICU Staff Nurse**
*Greater Baltimore Medical Center, Baltimore, MD*

6/1980 – 10/1981 **Telemetry Nurse**
*Wheeling Hospital, Wheeling, WV*

**SUMMARY OF QUALIFICATION:** Thirty years of diversified acute health care experience and accomplishments in positions of progressive managerial and executive responsibilities. Extensive involvement in organization redesign, renovation and restructuring; cost reduction; fiscal management; human resource management and development; project management; organizational transition; organization preparation for ANCC magnet designation and direction of clinical departments. Accomplishments include:

- Development and implementation of patient focus delivery systems
- Clinical lead for inpatient and outpatient units, ED renovations and construction
- Participated in building of new bed tower
- Facilitated throughput teams to expedite patient flow and decrease LOS by 16%
- Increased Emergency Department (NPS) patient satisfaction in an inner city hospital by 41%
- Decreased RN vacancy rate by 22%
- Exceeded goal for pressure ulcer rate by 44%
- Eliminated use of restraints in medical/surgical units and exceeded goal for decrease use in critical care by 69%
- Other quality matrix accomplishments included meeting and exceeding goals for hand washing, pneumococcal vaccine and influenza vaccine
- Achievement of TJC accreditation and licensure
- Implementation of management development program
- Labor management/union negotiations
- Patient care unit construction redesign for patient-centered care, and patient flow
- Preparation and management of annual budget in excess of $44 million
- Decreased use on incremental overtime by 60%
- Decreased use of external agency nurses by 50%
- Achieved productivity standards for staffing
- Organization development and change management
- Work redesign
- Reduced OR room turnover time down to <30 minutes

## PROFESSIONAL EXPERIENCE AND ACHIEVEMENTS

**HealthLinx Transitional Leadership** **2014-2015**

A division of HealthLinx Executive Search, Inc. a healthcare-exclusive consulting and search firm specializing in i) leadership assessment, project management and consulting; ii) the identification and recruitment of permanent management and executive healthcare candidates; and iii) the placement, assistance, and management of transitional leaders.

- **Transitional Leader** -December 2014-April 2015
  **Interim Director Professional Practice and Nursing Development (December 2014-April 2015)**
  **Mount Carmel East Hospital, Columbus Ohio**
- As a transitional leader, deliverables included i) validate the recently developed on-boarding plan and provide opportunity for improvement with particular focus on new graduate nurses, medical/surgical, critical care and Emergency Department nurses; ii) assess Clinical Education Department, resource allocation, clinical education staff competency and staff competency assessment model for the Hospital; and iii) assess Shared Governance Model with particular

focus on practice council, support structure and current functioning. Selected accomplishments included,

**Ascension Health System** **2006-2013**

A national healthcare provider in more than 1400 locations in 23 states and District of Columbia rooted in the loving ministry of Jesus as healer and is committed to serving all persons with special attention to those who are poor and vulnerable.

- **Senior Vice President Patient Care Services/CNO (2010-2013)**
  **Providence Hospital, Washington DC**
  A 408 bed teaching hospital with ADC of 200 inpatients and 40 behavioral health inpatients, offering medical graduate teaching and serving as a rotational site for domestic and international nursing students. Located in northeast District of Columbia with an average of 45,000 ED visits annually. Other specialties include Diabetes, Certified Stroke Center, Bariatric Services and Wellness Programs, Cardiology, Orthopedics, Sleep Wellness and Geriatric Medicine. As SVP/CNO, reported to president/CEO. Responsibilities included management of total operating budget of >$47 million, staff of >600 FTEs, re-design of throughput processes for main hospital portals (IP and OP surgery, and ED), implemented mid-level leadership development and performance standards for accountability. Selected accomplishments included:
    - decreased RN vacancy rate from >9% to 7%
    - decreased LOS from >5 to 4.2 days
    - eliminated use of agency RNs by 50%
    - decreased ED patient throughput by 30%
    - increased ED patient satisfaction from 32% to 54%

- **Vice President, Inpatient Services (2006-2010)**
  **Saint Agnes Hospital, Baltimore, Maryland**
  A 296 bed full service teaching hospital with residency program and student nurse rotation serving the greater Baltimore area, located in southwest Baltimore serving diverse communities, with ED visits >82,000. Clinical areas of specialties include Cancer Care, Metabolic, Cardiovascular, Women's & Children's Health, Orthopedic & Spine, Plastic & Reconstructive Surgeries, Stroke, Chest Pain Emergency Program. As VP, reported to senior vice president/CNE. Responsibilities included management of inpatient medical/surgical and critical care units, Nursing Operations (House Supervisors, staff float pool, Nursing Office), Care Management, Nursing Education and Development, management of operating budget of >$25 million, and staff of >200 FTEs, and nursing shared decision making and professional development programs. Selected accomplishments included;
    - decreased LOS from 4.49FYTD July 2008 to 3.95 FYTD May 2010
    - developed and implemented RN Professional Clinical Ladder Program
    - facilitated implementation of nursing leadership academy
    - facilitated strategies in preparation of ANCC magnet designation
    - facilitated nursing clinical research with the first NRB approved nursing research study

**Senior Director of Nursing** **2003-2006**

**Mercy Medical Center, Baltimore, Maryland**

A 299 bed teaching ANCC Magnet Designated Hospital located in downtown Baltimore with ED visits >62,000 annually. Clinical specialties include Cancer Care, Diabetic & Endocrine, Gastroenterology & GI Surgeries, Geriatrics, Gynecology, Nephrology, Orthopedic and Pulmonology. As senior director, reported senior vice president/CNE. Responsibilities included management of inpatient medical/surgical units, inpatient substance abuse unit, and OP Chemotherapy, management of operating budget of >$10 million and staff of >250 FTEs. Selected accomplishments included:

- developed nursing management and leadership structure of responsibility and accountability
- managed and lead managers through radical change of re-structuring of responsibilities and accountability
- lead coordination, development and implementation of RN clinical ladder for professional practice
- served as interim VP Patient Care Services
- began nursing and organizational preparation for magnet designation

**Director, Patient Care Service** **1996-2003**
**MedStar Harbor Hospital, Baltimore, Maryland**
A 179 bed community focused hospital located in south Baltimore on Patapsco River with an average of 40,000 ED visits annually. Clinical specialties include Internal Medicine, Orthopedic, Oncology, Sports Medicine, Back & Spine, and Women's Service. Mission is to provide a quality, caring experience for patients, communities and those who serve with a patient centered care philosophy. As director, reported to vice president/CNO. Responsibilities included management of inpatient medical/surgical units, critical care and Women's Health. Selected accomplishments included:

- facilitated transition from traditional patient care delivery to patient centered care model
- clinically designed, planned and implemented several patient centered care units with external construction team
- chaired Human Resource Design work team for MedStar transition for recruitment, selection, orientation and retention
- co-chaired work re-design team for Hospital-wide patient flow from admission to discharge

**ADDITIONAL EXPERIENCES:**

- **Vice President, Patient Care Service** **1993-1995**
  **Greater Southeast Community Hospital, Washington DC**
  A 400 bed acute care community hospital located in southeast Washington DC serving Prince George's County Maryland communities and southeast Washington DC. As vice president reported to president/CEO. Responsible for all nursing services with select accomplishments that included
  -implementation of position control system
  -expansion of home health services which increased visits by 20%
  -reduced management positions by 40%

- **Assistant Executive Director** **1991-1993**
  **Howard University Hospital, Washington DC**
  A comprehensive and academic teaching hospital located on campus of Howard University in District of Columbia. Level I Trauma Center with average of 60,000 ED visits annually, performing kidney and liver transplants. As assistant executive director, reported to COO and responsible for all nursing services and nurse management team member for labor contract negotiations.

**EDUCATION AND DEVELOPMENT**

- Class of 2010 *The Leadership Program of the Greater Baltimore Corporate*
- MBA, University of Baltimore, Baltimore Maryland
- MS Human Development, Howard University, Washington DC
- BSN, Howard University, Washington DC
- Diploma in Nursing, Freedmen's Hospital School of Nursing, Washington DC

**LICENSURE AND CERTIFICATION**

- RN, District of Columbia #R29886
- RN, Maryland #R128737

- RN, Ohio #RN412755
- NEA-BC #2009013543

## EXPERIENCE

KINDRED HEALTH CARE – HOSPITAL DIVISION – WEST REGION – WESTMINSTER, CA.
SENIOR DIRECTOR CLINICAL OPERATIONS (FEB 2009 – CURRENT)
Kindred is an acute long-term hospital caring for catastrophically ill and medically complex patients. Direct Oversight of 7-13 hospitals providing long term acute care (LTAC) in California. Ensured The Joint Commission accreditation for all assigned hospitals; assisted operations support, Quality and Regulator Review (Joint Commission and CMS survey preparation). In 2014 ensured 7 hospitals that were reviewed were re-accredited Joint Commission. Ensured 2 hospitals (2013 and 2015) achieved first time JC Accreditation. Assisted two hospitals successfully though CMS condition out to achieve full conditions. Serves as an active Governing Board member to multiple Kindred hospitals. Able to review and prepare facilities for both Laboratory and Hospital Joint Commission accreditation.

CONVERGENCE HEALTH CONSULTING, INC.
*SENIOR CONSULTANT (JULY 2007- FEB 2009)*
ANAHEIM MEMORIAL MEDICAL CENTER – INTERIM CONSULTING POSITION AS RISK MANAGER – Interim Risk Manager to develop complaint and grievance process to meet CMS requirements; continued to fill position as the Risk Manager. AMMC was in the process of a sale. In Oct. advanced to Chief Nursing Officer.

KINDRED HEALTH CARE
*REGIONAL DIRECTOR CLINICAL OPERATIONS (2004-2007)*
Promoted from COO role (see next)
Had direct oversight over 6 hospitals in the West Region. Assisted all 24 facilities in the West Region as needed for operations support, plan implementation, developing plans of correction. Ensured Joint Commission re-accreditation of 3 facilities that experienced a denial of accreditation. Assisted 2 other facilities in Conditional Accreditation to achieve full Joint Commission accreditation. Assisted one hospital in Joint Commission re-accreditation.

KINDRED HOSPITAL ONTARIO
*CHIEF OPERATIONS OFFICER (1996 –SEPTEMBER, 2004)*
Had responsibility for all clinical areas including Nursing, Pulmonary, Rehabilitation, Dietary, Radiology, Laboratory, Housekeeping, Social Services, Surgery, Infection Control, Employee Health and Pharmacy.
Chair multiple committees including Quality Council, Policy and Procedure, Employee Activities, Bioethics, Environment of Care, ICU and Medical Records committees. Member of Medical Executive Committee and Governing Board. Served as interim CEO for 8 months until CEO was recruited.

ST. BERNARDINE MEDICAL CENTER, SAN BERNARDINO, CALIFORNIA
*Director Patient Care Services (1989-1996)*
Started as a manager in 1989 for a 17 bed Intensive Care Unit and 12 bed Coronary Care Unit. In 1992 became Director of Nurses, reporting to the Chief Nurse Executive. Areas included ICU/CCU, Telemetry, Intermediate Care, Medical-Surgical Units, Peri-Operative Surgery, Out Patient Surgery Center, Central Supply, Diabetes Health Services, Hemodialysis and Nursing Services. (1994). Included responsibility for 250 FTE's and 10 managers. Chaired Nursing Policy and Procedure Committee. Active on multiple committees, including Quality Council, Medical Staff Committees, such as ICU and Surgery Committees.

QUEEN OF THE VALLEY HOSPITAL, WEST COVINA, CALIFORNIA
*Unit Coordinator, 1981-1989*
Manager for the Intermediate Care Unit, an18 bed unit with telemetry monitoring. Responsibilities included interviewing, hiring, firing and counseling. Coordinated patient care and other activities. Worked as staff nurse in the same area for the first three years. Also covered House Supervisor Position.

SANTA TERESITA HOSPITAL, DUARTE CALIFORNIA
*Paramedic Liaison Nurse, 1976-1981*
Worked as staff nurse in the Emergency Department for the first three years. Promoted to Paramedic Liaison Nurse. Created and developed this position based on L.A. County Health Services Guidelines. Coordinated paramedic and mobile intensive nurse (MICN) training.

LIFE FLIGHT OF SOUTHERN CALIFORNIA
*Flight Nurse, Fixed Wing, 1978-1983*

HURON ROAD HOSPITAL, E. CLEVELAND OHIO
*Circulating and Scrub Nurse, 1974-1976*

## EDUCATION

CAL STATE UNIVERSITY, SAN BERNARDINO *Masters of Science in Health Services Administration, 1997*

SOUTHERN ILLINOIS UNIVERSITY, CARBONDALE INDIANA
*Bachelor of Science in Health Care Management, 1989*

HURON ROAD HOSPITAL SCHOOL OF NURSING, EAST CLEVELAND, OHIO
*Diploma, Registered Nurse, 1974*

Re: Los Angeles Community Hospital (CCN: 050663)
Complaint Validation Resurvey 02/17/16
Credible Allegation of Compliance

Dear Mr. Arther:

Pursuant to the CMS letter, dated March 23, 2016, enclosed please find Los Angeles Community Hospital's (the "Hospital") timely submission of its credible allegation of compliance for the above-referenced survey.[1] The Hospital takes great pride in delivering quality health care services to the community and on its compliance with the Medicare Conditions of Participation. A copy of this letter and the credible allegation of compliance have been delivered to the Bakersfield District Office of the California Department of Public Health.

Thank you for your attention to this matter. Please contact me at 323-881-2600 if you have any questions or concerns.

Sincerely,

Deborah Webber
Chief Executive Officer

During an interview and review of the clinical record of Patient 28 on 2/17/16, at 9:30 AM, the admission record documented she was re-admitted to the sub acute care unit on 1/27/16. It was noted she signed her hemodialysis (a treatment in which a machine filters wastes, salts and fluid from your blood when your kidneys are no longer healthy enough to do this adequately) consent on 1/27/16. It was illegible, but the nurse who witnessed it (Registered Nurse [RN] 7) stated she had obtained Patient 28's signature indicating informed consent. There was another consent for Prozac (antidepressant medication), dated 1/27/16. The signature for the antidepressant consent was different from the markings on the hemodialysis consent. RN 7 stated, "The physician signed that one."<br><br>During an observation and interview on 2/17/16, at 10 AM, Patient 28 was lying in bed, breathing with a ventilator (breathing machine) connected to a tracheotomy (a surgically created hole through the front of a person's neck to the windpipe [trachea] which provides an air passage to help a person breathe and is often needed with long term ventilator use) and formula connected to Patient 28's feeding tube (a tube that is placed either through the nose and passed through the windpipe down to the stomach or directly to the stomach to provide liquid nutrition). Patient 28 did not wake up when spoken to. During another observation of Patient 28 with RN 7 and Licensed Vocational Nurse (LVN) 1 at 11:15 AM, RN 7 | {A 131} | Findings 1-3:<br><br>Immediate Actions Taken:<br>1. Patient 28's speech was difficult to understand and what could be understood did not seem to make a sentence. RN 7 was unable to identify what Patient 28 said with the approximately 6-8 words spoken.<br><br>During a review of the clinical record of Patient 28, a son was listed by name and a telephone number documented. The Minimum Data Set (MDS, an assessment tool) identified Patient 28's cognitive (ability to think, remember, and understand the environment) status on 9/3/15, as "Severely impaired--never/rarely made decisions." The MDS assessment dated 12/4/15, identified her cognitive status as severely impaired. RN 7 was asked if there was a re-assessment upon admission on 1/27/16. RN 7 stated, "No. Because she hadn't changed." RN 7 was asked if Patient 28's son could give consent. She replied, "The son doesn't return phone calls. Sometimes he's in jail. That's why he doesn't give his consent." RN 7 was asked how she could assess this patient in regards to obtaining an informed consent. RN 7 stated, "I talk to her and she seems to understand. Sometimes we can read her lips."<br><br>The hospital policy and procedure titled "Consent/Informed Consent" dated 1/2014, indicated: "...Policy:...1. Capacity to Consent. A person may give a valid consent only if he or she has 'capacity' which means he or she is able to understand the nature and consequence of a decision and to make and communicate the decision... If an adult lacks the capacity to make medical decisions, a surrogate decision-maker must be identified... iv. The hospital will establish a multi-disciplinary committee as a subcommittee | {A 131} | information the patient/representative needs in order to make an informed decision and for obtaining the patient's informed consent or refusal for the recommended procedure. A person may give a valid consent only if he/she has capacity, which means he/she is able to understand the nature and consequence of a decision and to make and communicate the decision. If an adult lacks the capacity to make medical decision, a surrogate decision-maker will be identified. Except in emergency situations, issues with obtaining an informed consent from the patient/representative will be addressed by the Ethics Committee. The hospital's role in the informed consent process is to verify that the physician obtained the patient's informed consent before the procedure. The witness to the patient/representative signing the informed consent form should legibly print his/her name and sign, date/time the document. The Medical Executive Committee (MEC) and Governing Board approved the policy on 3/30/16 policy and completion of the informed consent form.<br>2. Additionally the hospital's consent form (the document on which the patient's consent is annotated) was reviewed and revised to streamline the narrative, simplify the format and reduce the overall form from six (6) pages to two (2) pages. The hospital elected to maintain a separate consent for blood transfusions and the use of psychotropic medications. The consent form was approved by the MEC and Governing | 4/7/16 |

If the numbers do not match, the nurse is to notify the pharmacist. Nursing staff was reeducated on crash carts and the content list. The CNO or qualified designee performs a daily review of the crash carts to ensure the tamper resistant lock is intact to achieve the goal of 100% compliance with intact crash carts.<br><br>Finding 5<br>The CEO and Nursing Leadership discussed the survey findings regarding nursing care plans. In an attempt to refocus the nursing staff on critical thinking, paper nursing care plans were instituted to bring the nurse "back to basics." This method was pilot tested over a two-week period with nursing staff migrating from electronic care planning to paper care planning. After a two-week period, data collection and analysis revealed the paper process did not improve critical thinking and resultant improved documentation, as anticipated. After input from line nursing staff and analysis by Leadership, the request to revert back to an electronic care planning process was approved. Nursing staff was educated that care planning will revert back to the electronic format and renewed efforts will be applied to identifying the assessed needs of the patient and annotating these in the electronic care planning module. A process of concurrent record compliance monitoring, whereby a "care facilitator" (licensed | 4/7/16 |

(Refer to A 397) | {A 385} | healthcare professional) identifies any noncompliance with the subject matter, intercepts the nurse/provider in real time, and provides "just in time" education and training to correct clinical or documentation process issues, was implemented. This method allows for role modeling of strong clinical behavior while allowing staff to replicate improved practices. Care facilitation drives sustainability as staff learns from ongoing facilitation to identify, correct and improve practice weaknesses. A Care Facilitation worksheet was developed for use by the care facilitators which includes, among other things, accuracy and completeness of the care plan, and that the care plan reflects the assessed needs of the patient. This process was implemented on 4-7-16. Prior to this time, assigned staff were designated to review the care plan on the nursing units identifying deficiencies and working with staff to enhance understanding and improve the care planning process. The "Care Plan, Patient Interdisciplinary Plan of Care" policy was reviewed and revised to align to current practice. The nursing staff develops and keeps current, a nursing care plan for each patient that addresses the patient's individual acute hospitalization needs based on assessment outcomes. The plan of care is collaborative and goal directed and outlines the care that is to be provided to the patient/family. Nursing staff was inserviced on the policy and received refreshed education on the precepts of care planning. Compliance with nursing care plans is monitored through the QAPI program. | |

| A 395 | Continued From page 8<br><br>2a. During an observation and interview with the RN 25 (the charge nurse for the medical surgical unit) and the Certified Nursing Assistant (CNA) 1 on 2/16/16, at 11:46 AM, Room 111 was noted with eight patients. Patient 39 (Room 111) was observed lying in bed G with CNA 1 next to his bed. The patient appeared confused and the call light button was not observed within reach of Patient 39. CNA 1 indicated she removed the call light from the patient because "he is always on it" but he did have it earlier. CNA 1 and RN 25 proceeded to search for the call light. When the call light button was found, the cord was cut at the level of the wall; therefore, could not be accessible for Patient 39 to use. Patient 39 was approximately 2 feet from the call light. RN 25 stated CNA 1 is the assigned staff to care for Patient 39. She was asked how the nurse call system works. She stated the nurse call system includes a button at the wall with a cord that has the call light attached to it. The cord with the call light attached is what is provided to the patient. When the patient presses the red call light, it should be audible and visible above the patient room door and at the nurse's station.<br><br>During a review of the clinical record for Patient 39 and interview with RN 22, on 2/16/16, at 2 PM, the admitting diagnoses included: Altered Mental Status (AMS), Hypertension (high blood pressure), Diabetes Mellitus (a disease which results in the body's inability to produce enough insulin which results in elevated sugar levels), Abnormal Gait, Dementia and Convulsions. The care plan problem list included a care plan for patient's risk for harming himself, a care plan for pain and a care plan of fall. The fall care plan included an intervention which indicated, "...call | A 395 | Finding 2 a-f<br>Immediate Actions Taken:<br>1. Hospital Leadership took immediate action to address the call light findings at the time of survey. All call lights were checked at the L.A. and Norwalk campuses for functionality. The patients at the Norwalk campus with call lights that needed repair were provided with a sitter. The patients at the L.A. campus with call lights that needed repair were relocated to a room with a functioning call light.<br>2. Hospital Leadership notified the House Supervisors that patients were only allowed to be in a room with a call light that needed repair if the patient was provided with a sitter. Otherwise, the bed was to be closed and not for patient use.<br>3. Nursing Leadership assessed all patients at the time of survey to ensure that functioning call lights were within reach of the patient. Nursing staff was reeducated at the time of survey that call lights are to be within the patient's reach.<br><br>Subsequent Actions Taken:<br>1. Hospital Leadership discussed the survey findings. The "Reporting Malfunction" policy was reviewed and did not require any revisions. It was also identified that there was an existing policy related to the nurse call system. The policy, entitled "Utility Disruption: Nurse Call System" policy, was reviewed and revised to align with current practice in the event of a disruption in the nurse call light system. Upon identification of a malfunctioning call light, the staff is to | 2/16/16<br><br>2/16/16<br><br>2/16/16<br><br>3/1/16 - 4/7/16 |

|---|---|---|---|---|
| A 395 | Continued From page 15<br>drawer's sticker was partially torn off making it difficult to determine the exact contents of the third drawer. At 9:12 AM, the pediatric cart was observed. The pediatric crash cart had nine drawers with each drawer secured with blue plastic lock. It also had each drawer with a sticker indicating the contents inside the drawer. The bottom drawer of the cart indicated there was a "Medication Tray" and 2 IV (intravenous) start kits, 2 - extension sets, 2 - tuberculin syringes, 2 - 5 cc syringes, IV catheters including 2 - 24 gauge (g), 2 - 20 g, 2 - 22 g, 2 - 18 gauge. There were no IV start kits, no extension sets, no tuberculin syringes, no 5 cc syringes, no IV catheters of any size. This was validated by RN 26 and the ACNO. RN 26 stated, maybe it was mislabeled. When RN 26, was asked what happens to ensure the contents of the crash carts gets restocked and what happens to secure the contents of the crash carts until they are restocked. She stated the adult crash cart is secured after the central supply staff restocks it. The central supply staff places a green plastic lock which notifies staff it is ready for pharmacy to secure it and is ready and is fully stocked. She was unable to indicate what happens to the pediatric crash cart when the cart is opened to ensure it is secured until the contents are restocked. RN 26 stated, "once opened no way to secure .."<br><br>4b. During an observation and interview with ACNO and RN 28 (Charge Nurse to the Intensive Care Unit [ICU] and the telemetry unit), on 2/16/16, at 9:54 AM, an adult crash cart was noted in the telemetry hallway. The crash cart also had a sticker on each drawer identifying the content of each drawer. RN 28 was asked the process when the items in the crash cart are used. RN 28 stated, if the crash cart is opened | A 395 | assigned a log number. As detailed in the policy, any time that a crash cart is opened, it will be replaced with a fully stocked cart by central supply staff/designee, and will be locked by pharmacy staff/nursing supervisor (off hours) after the medication tray is added. The cart will then be returned to the unit. The MEC and Governing Board approved the policy on 3/30/16. Nursing staff was re-educated on the policy.<br>2. Hospital Leadership reviewed and updated the contents of the pediatric and adult crash carts. A new "easy to read" content list is now located on the top of the crash carts. The crash cart defibrillator checklist is on each crash cart, which addresses, among other things, that the nurse checks that all drawers are locked with a numbered lock and the lock number matches the number on the medication drawer tag. If the numbers do not match, the nurse is to notify the pharmacist. Nursing staff was reeducated on the updated content list and checklist.<br>3. All adult and pediatric crash carts were checked to make sure that they contain the necessary supplies/medications.<br>4. The Hospital purchased 9 pediatric crash carts which were stocked with supplies and medications. The Hospital also purchased 25 new adult crash carts on 3/2/16, which the vendor anticipates will be delivered by 4/13/16. | 3/1/16 -3/31/16<br><br>2/16/16<br><br>3/2/16 - 4/13/16 |

| (A 396) | Continued From page 17<br>review, the hospital failed to have pertinent, individualized nursing care plans for 12 of 31 sampled patients (29, 30, 38, 40, 42, 45, 47, 48, 49, 51, 52, 55). This had the potential that patients would not receive necessary care or have unmet care needs.<br><br>Findings:<br><br>1. During an interview and review of the clinical record for Patient 29 on 2/17/16, at 8:45 AM, the consents and admission paperwork were in Spanish. The charge nurse, Registered Nurse (RN) 8, stated he only spoke Spanish. Several care plans (anxiety, safety, hemodialysis) care plans were reviewed. There was no notation that Patient 29 only spoke Spanish on any care plan. RN 8 and Licensed Vocational Nurse (LVN) 1 confirmed this.<br><br>2. During an interview and review of the clinical record for Patient 30 on 2/17/16, at 10 AM, he was admitted on 2/12/16. One of his diagnoses was influenza and isolation was ordered on 2/13/16. Patient 30's care plans were reviewed (safety, respiratory, anxiety). None of his care plans addressed Patient 30 was on isolation.<br><br>The hospital policy and procedure titled "Care Plan, Patient Interdisciplinary Plan of Care", dated 11/2012, indicated: "Policy Purpose To provide each patient with an individual interdisciplinary plan of care that is collaborative and goal directed... A care plan outlines the care to be provided to an individual/family patient. It is a set of actions the care provider will implement to resolve/support nursing diagnoses identified by nursing assessment...that will include patient's admitting problems....needs, or other condition..." | (A 396) | Findings 1-11<br><br>Immediate Actions Taken:<br>1. Nursing staff updated the nursing care plans for the identified patients.<br>2. Nursing staff labeled and dated Patient 47 and 48's gastrostomy tube tubing.<br>3. The CNO and ACNO educated the applicable nurses at the time of survey regarding documenting individualized nursing care plans based on the patient's condition.<br><br>Subsequent Actions Taken:<br>1. The CEO and Nursing Leadership discussed the survey findings regarding nursing care plans. In an attempt to refocus the nursing staff on critical thinking, paper nursing care plans were instituted to bring the nurse "back to basics." This method was pilot tested over a two-week period with nursing staff migrating from electronic care planning to paper care planning. After a two-week period, data collection and analysis revealed the paper process did not improve critical thinking and resultant improved documentation, as anticipated. After input from line nursing staff and analysis by Leadership, the request to revert back to an electronic care planning process was approved. Nursing staff was educated that care planning will revert back to the electronic format and renewed efforts will be applied to identifying the assessed needs of the patient and annotating these in the electronic care planning module. A process of concurrent record compliance monitoring, | 2/16/16<br>2/16/16<br>2/16/16<br>4/7/16 |

| (A 396) | Continued From page 18<br><br>3. During a review of the clinical record for Patient 38, with RN 25, on 2/16/16, at 10:36 AM, the patient was admitted with diagnoses of cellulitis (bacterial skin infection) to the left foot and right big toe wound. There was no individualized care plan for the treatment to the left foot or an individualized care plan for the treatment of the right big toe.<br><br>During an observation of Patient 38 and interview with RN 26 (the treatment nurse), on 2/16/16, at 11:30 AM, Patient 38's right and left foot wounds were noted. The left fourth toe was uncovered and blackened. The inner portion of the right big toe was reddened. A review of the care plans was conducted and there was one care plan problem that was not specific to either the left foot or right foot. RN 26 stated, there should be two care plans to outline the care of each of the identified areas since they require different treatment interventions. No additional information was provided.<br><br>4. During an observation of Patient 40 with RN 25, on 2/16/16, at 11:55 AM, in Room 110 Bed C, the patient was observed lying in bed. A call light to contact the nurse was not noted within reach of the patient. The patient was asked if she had a call light that could be used to call the nurse. As she felt around her bed, she was unable to locate a call light. She stated she was unable to see due to being "Legally Blind and (having) Macular Degeneration (an eye disease that progressively causes severe vision loss)". RN 25 proceeded to feel around the bed for the call light, which was then given to the patient. After being given the call light, Patient 40 proceeded to demonstrate she could use the call light. | (A 396) | whereby a "care facilitator" (licensed healthcare professional) identifies any noncompliance with the subject matter, intercepts the nurse/provider in real time, and provides "just in time" education and training to correct clinical or documentation process issues, was implemented. This method allows for role modeling of strong clinical behavior while allowing staff to replicate improved practices. Care facilitation drives sustainability as staff learns from ongoing facilitation to identify, correct and improve practice weaknesses. A Care Facilitation worksheet was developed for use by the care facilitators which includes, among other things, accuracy and completeness of the care plan, and that the care plan reflects the assessed needs of the patient. This process was implemented on 4-7-16. Prior to this time, assigned staff were designated to review the care plan on the nursing units identifying deficiencies and working with staff to enhance understanding and improve the care planning process.<br>2. The "Care Plan, Patient Interdisciplinary Plan of Care" policy was reviewed and revised to align to current practice. The nursing staff develops and keeps current, a nursing care plan for each patient that addresses the patient's individual acute hospitalization needs based on assessment outcomes. The plan of care is collaborative and goal directed and outlines the care that is to be provided to the patient/family. The MEC and Governing Board approved the policy on 3/30/16. Nursing staff was inserviced on the policy and received | 4/7/16 |

| (A 396) | Continued From page 19<br><br>During a review of the clinical record of Patient 40 and interview with RN 25, on 2/16/16, at 2:15 PM, Patient 40 was admitted on 2/15/16. The care plans were reviewed, and there was no care plan to ensure staff were aware of the patient's vision impairment and to ensure staff would implement the care needs of the patient with vision impairment. RN 22 verified the findings.<br><br>5. During a review of the clinical record for Patient 42 and interview with RN 22, on 2/16/16, at 2:50 PM, the admitting diagnosis included diabetes mellitus. The physician's orders indicated he was being treated with regular insulin based on the results of the routine fingersticks. The care plans were reviewed and there was no care plan for the diabetes mellitus to ensure staff were aware of appropriate interventions to treat the problem.<br><br>6. During a review of the clinical record for Patient 45 and interview with Licensed Vocational Nurse (LVN) 3, on 2/17/16, at 9:30 AM, the physician's orders were noted. A physician's order dated 2/1/16, for nasogastric tube (NGT) feeding (a flexible tube that is passed through the nose to the stomach to provide nutrition for patients who are unable to take sufficient nutrition orally) at 45 cc/hr (cubic centimeters per hour) was noted. The care plan problems for the patient were reviewed. The nutrition care plan included interventions for a patient who was receiving a diet orally and not a diet provided via a nasogastric tube. Documented interventions after the NGT was placed for nutrition included: "demonstrates appropriate selection of meals...eating in response to internal cues other than hunger...encourage water intake..." LVN 3 | (A 396) | refreshed education on the precepts of care planning.<br>3. Hospital Leadership hired additional nursing management staff, including a Director of ED/ICU Services and Director of Medical Surgical Services.<br>4. Nursing staff is educated on nursing care plans upon hire.<br>5. Compliance with nursing care plans is monitored through the QAPI program.<br><br>Compliance and Monitoring:<br>Effective 4/7/16, data is collected by the care facilitators, aggregated and reported to leadership at least weekly to allow for leadership to focus resources on those issues and units where continued vulnerabilities exist. The goal is to achieve 100% compliance. Data is analyzed and reported monthly to the Quality Council and MEC, and at least every other month to the Governing Board until sustained compliance is achieved and process control is demonstrated. Ongoing monitoring will continue until the Quality Council determines sustained compliance has occurred, at which time the Council will provide direction on what adjustments to monitoring are necessary for ongoing sustainability (e.g., random samples or inclusion of the issue as an ongoing indicator).<br><br>Person Responsible:<br>Chief Nursing Officer | 3/14/16 |

| {A 454} | Continued From page 27<br>Based on interview and record review, the hospital failed to follow its policy and procedure of having telephone or verbal orders signed by the physician within 48 hours, for four of 31 sampled patients (28, 31, 32, 52). This has the potential that medical records are not maintained within current clinical record standards.<br><br>Findings:<br><br>1. During a review of the clinical record and interview with Licensed Vocational Nurse (LVN) 1 on 2/17/16, at 9:20 AM, Patient 28 was admitted 1/27/16. Four telephone orders from 1/27/16 had not been signed as of 2/17/16, three weeks. This was verified by LVN 1.<br><br>2. During a review of the clinical record and interview with LVN 1 on 2/17/15, at 9:30 AM, Patient 31 was admitted 2/9/16 with the diagnosis of "Diabetic Foot Ulcer". Patient 31's physician's medication orders were reviewed: 1. Eight verbal/telephone orders from 2/9/16 had not been signed by the ordering physician (six days date). 2. One verbal/telephone order from 2/10/16 had not been signed (five days late). 3. Three verbal/telephone orders from 2/13/16 had not been signed (two days late). LVN 1 verified the information.<br><br>3. During a review of the clinical record and interview with LVN 1 on 2/17/16, at 9:30 AM, Patient 32 was admitted 12/3/15, with a diagnosis of "leukocytosis" (high white count, usually indicated infection). Robitussin DM (cough suppressant) was ordered verbally or by telephone on 1/8/16. It was not signed by the physician until 1/28/16, three weeks later. Pancrelipase (medication to help the body digest | {A 454} | Subsequent Actions Taken:<br>1. Hospital Leadership reviewed the "Telephone, Verbal and Written Order for Medication" Policy, which delineates the process for physicians to authenticate their telephone and verbal medication orders within 48 hours. The policy did not require any revisions.<br>2. Effective 2/24/16, the "Allscripts" EMR system requires physicians to authenticate their unsigned orders prior to proceeding with any other system function. A memo was sent to the practitioners with implementation of the hard stop in the Allscripts EMR system.<br>3. The issue of compliance with authentication of verbal and telephone orders was discussed at the 3/30/16 MEC meeting. A refresher memo was sent on 3/31/16 to medical staff members regarding authenticating telephone and verbal orders timely.<br>4. The Medical Staff Office worked with physicians to obtain remote access to the EMR system to allow for timely completion of telephone/verbal order authentication.<br>5. Compliance with authenticating telephone and verbal orders is monitored through the QAPI program. | 2/24/16<br>2/24/16<br>3/31/16<br>4/7/16 |

| A 467 | Continued From page 29<br>This STANDARD is not met as evidenced by:<br>Based on observation, interview, and record review, the hospital failed to ensure the licensed nurses documentation contained information necessary to monitor one of 31 sampled patient's condition (49) receiving a Hemodialysis (a procedure in which impurities or wastes are removed from the blood) treatment. This failure had the potential to result in unmet care needs.<br><br>Findings:<br><br>During an observation with Registered Nurse (RN) 22, on 2/16/16, at 9:40 AM, in the patient's room, Patient 49 was in bed with the head part slightly elevated at 30 degree angle. He had an oxygen inhalation via nasal cannula. Patient 49 waved his hand when he was asked how he was doing.<br><br>During an interview with RN 22, on 2/16/16, at 9:42 AM, she stated Patient 49 was on Hemodialysis three times a week. RN 22 also stated Patient 49 was alert and oriented and he was able to make his needs known.<br><br>During a review of the clinical record for Patient 49, the Physician's Order dated 2/16/16, indicated Patient 49 to receive "Hemodialysis STAT ONCE [immediately one time] for 2 hours dry - DX [diagnosis]: Hypoxia [inadequate oxygen tension at the cellular level]." During further review of the clinical record for Patient 49, there was no documentation by the licensed nursing staff for the Hemodialysis treatment ordered on 2/16/16. The Hemodialysis treatment was an additional order by the physician from Patient 49's current order of three times a week (Monday-Wednesday-Friday). It was ordered due | A 467 | Immediate Actions Taken:<br>1. The ACNO discussed the survey findings with the applicable nurse, with special emphasis on reassessing the patient's status and documenting his/her condition in the medical record (e.g., a one time stat order for hemodialysis).<br><br>Subsequent Actions Taken:<br>1. Nursing Leadership reviewed the "Assessment/Reassessment of Patient" policy. As delineated in the policy, the nurse shall reassess the Inpatient at least every shift (or more frequent depending on the patient status) to document changes in the patient's condition and/or diagnosis and to determine the patient's response to interventions. Nursing reassessments will be documented in the appropriate section of the EMR. Nursing staff was reeducated on the policy.<br>2. Nurses are educated on assessments and reassessments upon hire.<br>3. A process of concurrent record compliance monitoring, whereby a "care facilitator" (licensed healthcare professional) identifies any noncompliance with the subject matter, intercepts the nurse/provider in real time, and provides "just in time" education and training to correct clinical or documentation process issues, was implemented. This method allows for role modeling of strong clinical behavior while allowing staff to replicate improved practices. Care facilitation drives sustainability as staff learns from ongoing | 2/17/16<br><br>3/1/16 - 3/15/16<br><br>4/7/16 |

Unused rooms are cleaned once during each 24-hour period during the regular work week. Should any room remain unused over the week-end period, a brief cleaning (i.e., the cleaning used in a room turn-over after a procedure) will be performed prior to staff setting up the room for a case. The terminal cleaning log captures the date and time of the terminal cleaning, the location, the initials of the staff member and allows for comments to be documented. The truncated "Monday morning" cleaning is not required to be documented as this is a regular process for unused rooms every Monday. Education was provided to OR and EVS staff through inservices and 1:1 education with demonstration of terminal cleaning and required return demonstration. The Director of EVS developed a competency tool for EVS staff for terminal cleaning. The Director of EVS selected a core team of EVS staff to work in the OR and perform terminal cleaning. These EVS staff have completed the terminal cleaning competency.<br><br>Finding 2<br>The identified supplies were removed. The room is now a dedicated sterile processing room. The Hospital installed a handwashing sink and four (4) foot barrier between the decontamination area and the autoclave. Hospital Leadership reviewed the "Separation of Clean and Contaminated Items" policy, which did not require any revision. OR staff was reeducated on storage of sterile supplies versus clean. | 2/17/16 - 4/6/16 |

It was confirmed that use of the Tdap vaccination is recommended but not mandatory. Nonetheless, Hospital Leadership elected to offer the Tdap vaccination to employees. The Tdap vaccine was ordered and a flyer distributed for employees (posted at time clocks and in department units) that the vaccine is being offered and when/where they can receive the vaccination. In addition, the Director of HR developed a Tdap consent/declination form for employees to complete, which will be maintained in the employee's personnel file. In addition, the Director of HR developed a spreadsheet that lists all employees and the status of their vaccinations for Tdap, hepatitis, and measles, mumps, and rubella, (MMR) and varicella. Employee files were reviewed to update the spreadsheet and employees. If information was not present regarding the status of the immunity for hepatitis, MMR and varicella, the employee was requested to be tested for titers. If the results indicated a low titer, the employee was provided with a booster of the applicable vaccination. The Hospital hired a new HR Director, who is working closely with the Director of Infection Control to ensure that employee immunizations are current. | |

The identified room received a terminal cleaning.<br>2. Hospital Leadership and the Director of Infection Control discussed the survey findings with the Director of EVS and Interim Director of the OR, with emphasis on compliance with terminal cleaning of the perioperative areas. A policy entitled "The Environmental Sanitation Perioperative Setting" policy was developed to address the terminal cleaning process and the "Perioperative Services EVS Terminal Cleaning Log" was reviewed and revised to be more comprehensive. As detailed in the policy, all procedure rooms, the scrub areas, the sterile instrument room and the sterile processing department are terminally cleaned on a daily basis when the scheduled procedures are completed for the day and each 24-hour period during the regular work week. Unused rooms are cleaned once during each 24-hour period during the regular work week. Should any room remain unused over the week-end period, a brief cleaning (i.e., the cleaning used in a room turn-over after a procedure) will be performed prior to staff setting up the room for a case. The terminal cleaning log captures the date and time of the terminal cleaning, the location, the initials of the staff member and allows for comments to be documented. The truncated "Monday morning" cleaning is not required to be documented as this is a regular process for unused rooms every Monday. The MEC and Governing Board approved the policy and checklist on | 2/17/16<br><br>4/7/16 |

It states that as part of the preemployment evaluation, employees will be required to complete a questionnaire regarding prior vaccinations for, or exposure to communicable vaccine-preventable diseases. In situations where immunity is questionable or undetermined from the questionnaire the employee will be tested to determine his/her immune status. | {A 749} | Finding 6<br>1. Hospital Leadership, including the Director of Human Resources and Director of Infection Control, discussed the survey findings and the process for monitoring immunizations for hospital employees. The "Physical Examinations - Post Employment Offer" policy was reviewed and revised to align with current practice. The MEC and Governing Body approved the policy on 3/30/16. The Director of Infection Control researched the issue of Tdap vaccination for health care workers and discussed mandatory versus recommended guidelines with a representative from the Immunization Branch of the California Department of Public Health. It was confirmed that use of the Tdap vaccination is recommended but not mandatory. Nonetheless, Hospital Leadership elected to offer the Tdap vaccination to employees. The Tdap vaccine was ordered and a flyer distributed for employees (posted at time clocks and in department units) that the vaccine is being offered and when/where they can receive the vaccination. In addition, the Director of HR developed a Tdap consent/declination form for employees to complete, which will be maintained in the employee's personnel file. In addition, the Director of HR developed a spreadsheet that lists all employees and the status of their vaccinations for Tdap, hepatitis, and MMR and varicella. Employee files were reviewed to update the spreadsheet and employees. If information was not present regarding the status of the immunity for hepatitis, MMR | 4/7/16 |

State of California-Health and Human Services Agency
California Department of Public Health

CDPH

KAREN L. SMITH, MD, MPH
*Director and State Health Officer*

EDMUND G. BROWN JR.
Governor

April 12, 2016

Los Angeles Community Hospital
4081 E Olympic Blvd
Los Angeles, CA 90023

Dear Administrator:

FACILITY: Los Angeles Community Hosp
COMPLAINT NUMBER: CA00449063

Enclosed is STATE FORM Statement of Deficiencies and Plan of Correction Form, which resulted from a recent visit to your facility. Please prepare a plan of correction, sign and date the document, return the original to this department within ten (10) calendar days from receipt of this STATE FORM Statement of Deficiencies, and retain a copy for your file.

The Plan of Correction for each deficiency must contain the following:

a) What corrective action(s) will be accomplished for the patient(s) identified to have been affected by the deficient practice.
b) How other patients having the potential to be affected by the same deficient practice be identified, and what corrective action will be taken.
c) What immediate measures and systemic changes will be put into place to ensure that the deficient practice does not recur.
d) A description of the monitoring process and positions of persons responsible for monitoring (i.e., Administrator, Director of Nursing, or other responsible supervisory personnel). How the facility plans to monitor its performance to ensure corrections are achieved and sustained. The plan of correction must be implemented, corrective action evaluated for its effectiveness, and it must be integrated into the quality assurance system.
e) Dates when corrective action will be completed. The corrective action completion date must be acceptable to the Department. The deficient practice should be corrected immediately. This date shall be no more than 30 calendar days from the date the facility was notified of the non-compliance.

If your Plan of Correction is unacceptable to the Department you will be notified in writing. You are ultimately accountable for compliance, and responsibility is not

alleviated where notification of the acceptability of the plan of correction is not timely. Your plan of correction will serve as the facility's allegation of compliance. If an acceptable plan of correction is not received within ten (10) calendar days from receipt of the STATE FORM Statement of Deficiencies, the Department will recommend to the regional office and/or the State Medicaid Agency that remedies be imposed as soon as the notice requirements are met.

If you have any questions, please contact Tamara Cleveland , Health Facilities Evaluator Supervisor, at 855-804-4205.

Sincerely,

*Mic6ealTioyi*

## 5. Reports of ECHN's Quality Evaluation Team to the Board of ECHN

Please see attached report of the ECHN Quality Evaluation Team to the Board of ECHN, together with the resolutions adopted by the Board following such report.

# REVIEW OF CHARTERCARE/PROSPECT MEDICAL HOLDINGS

**Situation:**

The ECHN Quality Department visited CharterCARE Hospitals, Roger Williams Medical Center (RWMC) and Our Lady of Fatima Hospital (OLF), in Providence RI on Friday March 4, 2016 to evaluate their quality improvement systems. RWMC is licensed for 250 beds with an average daily census of 100, OLF is licensed for 359 beds with an average daily census of 107.

**Background:**
